December 14, 2010

Board of Trustees
Municipal Employees' Retirement System
7937 Office Park Blvd.
Baton Rouge, LA 70809

Ladies and Gentlemen:

We are pleased to present our report on the actuarial valuation of the Municipal Employees' Retirement System for the fiscal year ending June 30, 2010. Our report is based on the actuarial assumptions specified and relies on the data supplied by the system's administrative director and auditors. This report was prepared at the request of the Board of Trustees of the Municipal Employees' Retirement System. The primary purposes of the report are to determine the actuarially required contribution for the retirement system for the fiscal year ending June 30, 2011, to recommend the net direct employer contribution rate for fiscal 2012, and to provide information for the system's financial statements. This report was prepared exclusively for the Municipal Employees' Retirement System for a specific limited purpose. It is not for the use or benefit of any third party for any purpose.

This report has been prepared in accordance with generally accepted actuarial principles and practices, and to the best of our knowledge and belief fairly reflects the actuarial present values and costs stated herein. The undersigned actuaries are members of the American Academy of Actuaries and have met the qualification standards for the American Academy of Actuaries to render the actuarial opinions incorporated in this report, and are available to provide further information or answer any questions with respect to this valuation.

Sincerely,

G. S. CURRAN & COMPANY, LTD.

**SUMMARY OF VALUATION RESULTS
MUNICIPAL EMPLOYEES' RETIREMENT SYSTEM - PLAN A**

Valuation Date:	June 30, 2010	June 30, 2009
Census Summary: Active Members	5,068	5,052
Retirees and Beneficiaries	2,907	2,861
Terminated Due a Deferred Benefit	183	172
Terminated Due a Refund	2,590	2,596
Payroll:	\$ 162,546,523	\$ 157,082,727
Benefits in Payment:	\$ 41,527,971	\$ 39,834,118
Frozen Unfunded Actuarial Accrued Liability:	\$ 75,064,492	\$ 74,616,607
Market Value of Assets:	\$ 624,427,505	\$ 568,167,813
Actuarial Asset Value:	\$ 704,735,602	\$ 670,910,030
Actuarial Accrued Liability (as defined by GASB-25)	\$ 779,800,094	\$ 745,526,637
Ratio of Actuarial Value of Assets to Actuarial Accrued Liability:	90.37%	89.99%

	FISCAL 2011	FISCAL 2010
Employer Normal Cost (July 1):	\$ 25,342,972	\$ 20,316,266
Amortization Cost (July 1):	\$ 5,329,727	\$ 5,112,448
Interest Adjusted Gross Employer Actuarially Required Contribution Including Estimated Administrative Costs:	\$ 32,574,340	\$ 27,098,834
Projected Ad Valorem and Revenue Sharing Funds	\$ 5,130,645	\$ 4,936,292
Net Direct Employer Actuarially Required Contribution:	\$ 27,443,695	\$ 22,162,542
Actuarially Required Net Direct Employer Contribution Rate	16.41%	13.78%
Actual Net Direct Employer Contribution Rate:	14.25%	13.50%

Minimum Recommended Net Direct Employer Contribution Rate Fiscal 2012: 16.75% Fiscal 2011: 13.75%

Employee Contribution Rate: 9.25% of Payroll

Actuarial Cost Method: Frozen Attained Age Normal Actuarial Cost Method

Valuation Interest Rate: 8% (Net of Investment Expense)

Exclusions from Census: None

Basis of Actuarial Asset Value: The actuarial value of assets is based on the market value of investment securities adjusted to phase in asset earnings above or below the assumed rate of return over a five-year period with limits set at 85% and 115% of the market value of assets. When the adjusted value falls outside of the limits, the actuarial value is set equal to the average of the limited and adjusted value.

Changes in Valuation Methods, Assumptions, and/or Amortization Periods: A change was made to the mortality assumption for actives and retirees. In addition, changes were made to the assumed rates of disability and the assumed rate of post-DROP retirement.

Method of Recognizing Gains and Losses: Under the Frozen Attained Age Normal Method, actuarial gains and losses are spread over future normal costs.

**SUMMARY OF VALUATION RESULTS
MUNICIPAL EMPLOYEES' RETIREMENT SYSTEM - PLAN B**

Valuation Date:	June 30, 2010	June 30, 2009
Census Summary: Active Members	2,197	2,269

Employee Contribution Rate: 5.00% of Payroll

Actuarial Cost Method: Frozen Attained Age Normal Actuarial Cost Method

Valuation Interest Rate: 8% (Net of Investment Expense)

Exclusions from Census: None

Basis of Actuarial Asset Value: The actuarial value of assets is based on the market value of investment securities adjusted to phase in asset earnings above or below the assumed rate of return over a five-year period with limits set at 85% and 115% of the market value of assets. When the adjusted value falls outside of the limits, the actuarial value is set equal to the average of the limited and adjusted value.

Changes in Valuation Methods, Assumptions, and/or Amortization Periods: A change was made to the mortality assumption for actives and retirees. In addition, changes were made to the assumed rates of DROP entry, disability, and the assumed rate of post-DROP retirement.

Method of Recognizing Gains and Losses: Under the Frozen Attained Age Normal Method, actuarial gains and losses are spread over future normal costs.

COMMENTS ON DATA

For the valuation, the administrative director of the system furnished a census on compact disk derived from the system's master data processing file indicating each active covered employee's sex, date of birth, service credit, annual salary, and accumulated contributions. Information on retirees detailing dates of birth of retirees and beneficiaries, as well as option categories and benefit amounts, was provided in like manner. In addition, data was supplied on former employees who are vested or who have contributions remaining on deposit. As illustrated in Exhibit X, there are 5,068 active members in Plan A of whom 2,193 have vested retirement benefits including 229 participants in the Deferred Retirement Option Plan (DROP); 2,907 former Plan A members or their beneficiaries are receiving retirement benefits. An additional 2,773 Plan A members have contributions remaining on deposit with the system; of this number, 183 have vested rights for future retirement benefits. Census data on Plan B members may be found in Exhibit XXI. There are 2,197 active members in Plan B of whom 795 have vested retirement benefits including 84 participants in the Deferred Retirement Option Plan (DROP); 836 former Plan B members or their beneficiaries are receiving retirement benefits. An additional 1,134 Plan B members have contributions remaining on deposit with the system; of this number, 72 have vested rights for future retirement benefits. All individuals submitted were included in the valuation.

Census data submitted to our office is tested for errors. Several types of census data errors are possible; to ensure that the valuation results are as accurate as possible, a significant effort is made to identify and correct these errors. In order to minimize coverage errors (i.e., missing or duplicated individual records) the records are checked for duplicates, and a comparison of the current year's records to those submitted in prior years is made. Changes in status, new records, and previous records which have no corresponding current record are identified. This portion of the review indicates the annual flow of members from one status to another and is used to check some of the actuarial assumptions, such as retirement rates, rates of withdrawal, and mortality. In addition, the census is checked for reasonableness in several areas, such as age, service, salary, and current benefits. The records identified by this review as questionable are checked against data from prior valuations; those not recently verified are included in a detailed list of items sent to the system's administrative staff for verification and/or correction. Once the identified data has been researched and verified or corrected, it is returned to us for use in the valuation. Occasionally some requested information is either unavailable or impractical to obtain. In such cases, values may be assigned to missing data. The assigned values are based on information from similar records or based on information implied from other data in the record.

In addition to the statistical information provided on the system's participants, the system's administrative director furnished general information related to other aspects of the system's expenses, benefits and funding. Valuation asset values as well as income and expenses for the fiscal year were based on information furnished by the system's auditor, the firm of Duplantier, Hrapmann, Hogan & Maher, L.L.P. As indicated in the system's audit report, the net market value of Plan A's assets was \$624,427,505 as of June 30, 2010. Net investment income for fiscal 2010 measured on a market value basis for Plan A amounted to \$62,068,289. Contributions to the Plan for the fiscal year totaled \$42,066,336; benefits and expenses paid by Plan A amounted to \$47,874,933. The net market value of Plan B's assets was \$130,596,777 as of June 30, 2010. Net investment income for fiscal 2010 measured on a market value basis for Plan B amounted to \$12,784,993. Contributions to the Plan for the fiscal year totaled \$9,590,240; benefits and expenses

paid by Plan B amounted to \$8,994,247. In addition to the two benefit trust funds the system maintains an expense fund for payment of certain investment and administrative expenses. The balance in this fund at the beginning of the year was \$482,868 and at the end of the year the balance was \$341,267.

Notwithstanding our efforts to review both census and financial data for apparent errors, we must rely upon the system's administrative staff and accountants to provide accurate information. Our review of submitted information is limited to validation of reasonableness and consistency. Verification of submitted data to source information is beyond the scope of our efforts.

COMMENTS ON ACTUARIAL METHODS AND ASSUMPTIONS

This valuation is based on the Frozen Attained Age Normal actuarial cost method with the unfunded actuarial accrued liability frozen as of June 30, 1989. Under the provisions of Louisiana R.S. 11:103 the unfunded accrued liability for Plan A, which was determined to be \$48,466,297 as of June 30, 1989, was amortized over forty years with payments increasing at 4.25% per year. The unfunded accrued liability for Plan B, which was determined to be \$9,853,175 as of June 30, 1989, was amortized over forty years with payments decreasing at 2% per year. In Plan A, payroll growth less than 4.25% per year will increase future amortization payments as a percent of payroll. In Plan B, any payroll growth or payroll decline less than 2% per year will reduce future amortization payments as a percent of payroll. Under the Frozen Attained Age Normal Cost Method, actuarial gains and losses are spread over future normal costs. Thus, favorable plan experience will lower future normal costs; unfavorable experience will cause future normal costs to increase. In addition, changes in benefits and assumptions are also spread over future normal costs.

Prior to the June 30, 2009 valuation, in any year in which the net direct employer contribution was set above the actuarially required employer contribution rate, excess funds collected, if any, were used to reduce the frozen unfunded actuarial accrued liability. In Plan B, the board elected to freeze the employer contribution rate in fiscal 2001. As a result of the additional contributions generated by this freeze in rates, the unfunded accrued liability will be fully amortized by June 30, 2023. Effective with the June 30, 2009 valuation, any excess funds collected as a result of a freeze in employer contributions are credited to the Funding Deposit Account. Funds deposited into the Funding Deposit Account can be used to reduce the unfunded accrued liability, reduce future normal costs, or offset net direct employer contributions as determined by the board of trustees.

The current and prior year actuarial assumptions utilized for the report are outlined on pages sixty-four through seventy. In the aggregate the assumptions represent our "best estimate" of future long-term experience for the fund. To the extent that prospective experience differs from that assumed, adjustments to contribution levels will be required.

An experience study was conducted to re-examine decrement experience for the fund over the last five years. Ratios of actual to expected decrements were calculated for disability, withdrawal, retirement, and DROP entry. The relatively small size of the Fund does not provide sufficient data to creditably build full tabular decrement rates at each age based on recent experience. In addition, the unique benefit structure makes the use of standard tables impractical. Thus, the newly

developed rates are set by subjective adjustments to the existing tabular rates based on the experience of the five prior fiscal years.

As a result of this analysis for Plan A, assumed rates of disability and post-DROP retirement were reduced, while withdrawal rates, DROP entry rates, and retirement rates were left unchanged. For Plan B, assumed rates of disability, DROP entry, and post-DROP retirement were reduced. Withdrawal rates and retirement rates were left unchanged. A review of salary increases over the most recent five years showed average salary increases near projected levels in both plans. Therefore, no change was made in the assumed rate of salary increase.

In the case of mortality, new mortality assumptions were set for both plans after reviewing the study performed on plan data for the period of 1999 through 2004, as well as, an updated study using data for the period of 2004 through 2009. Based upon the results of these studies, a projected mortality table was created using the liability duration of the Plan for the projection period. The resulting projected mortality table was compared to several standard tables and the RP2000 healthy annuitant table was selected for non-disabled annuitants and beneficiaries. The RP2000 employee table was selected for active lives. A determination was made that these tables would produce liability values approximating the appropriate generational mortality tables.

The aggregate effect of all changes to assumptions was to increase the normal cost accrual rate by 2.9107% in Plan A and 1.9805% in Plan B.

CHANGES IN PLAN PROVISIONS

The following changes in plan provisions were enacted during the 2010 Regular Session of the Louisiana Legislature:

Act 93 created a Funding Review Panel charged with meeting to collect information relative to the Municipal Employees' Retirement System, the Municipal Police Employees' Retirement System, and the Firefighters' Retirement System. The Funding Review Panel shall then submit a report by March 15, 2011 to the House and Senate committees on retirement and to the legislative auditor with recommendations for increasing the actuarial soundness of each system and providing affordable benefits to members of each system.

Act 306 makes changes to the membership section of the statute. It provides that any employee first employed on or after November 1, 2010 by any department created by the Home Rule Charter for the Lafayette City-Parish Consolidated Government, other than employees first employed by the police and fire departments who are enrolled in the Municipal Police Employees' Retirement System or the Firefighters' Retirement System, and any employee first employed on or after November 1, 2010 by the City Court of Lafayette, inclusive of the office of the marshal, but exclusive of the judges of the city court, shall, as a condition of employment, become members of the Municipal Employees' Retirement System of Louisiana, if they otherwise satisfy the membership eligibility requirements.

Act 634 added to the limited provisions of garnishment of retirement benefits and contribution refunds court-ordered restitution, fines, costs of incarceration, probation, or parole imposed on

members, former members, or retirees as a result of a guilty plea or *nolo contendere* to the commission of a felony for misconduct associated with such person's service as an elected official or public employee for which credit in the fund was earned or accrued for felonies committed on or after July 1, 2010. The act does not impinge on the community property interest of a spouse or former spouse.

Act 874 makes certain changes to the Public Retirement System's Actuarial Committee. The act sets a deadline for determining the employer contribution rate of the last Monday in February. The act changes one of the members of the committee from the Legislative Actuary to the Legislative Auditor or his designee. The act also states that each agency represented by a member of the committee shall provide clerical staff as requested by any member of the committee in fulfillment of the duties of the committee. In addition, the act makes several technical changes to the statutes governing the committee.

Act 1004 provides for guidelines in asset allocation studies, investment policy, and selecting investments for all state and statewide retirement systems and calls for such systems to submit quarterly reports on investment results to the House and Senate Retirement Committees.

Act 1048 amended the state constitution to require that any public retirement system benefit provision having an actuarial cost must receive a two-thirds majority of the elected members of each house of the legislature in order to pass.

ASSET EXPERIENCE

The actuarial and market rates of return for the past ten years are given below. These rates of return on assets were determined by assuming a uniform distribution of income and expense throughout the fiscal year and are based on values provided by the system's auditors.

		<u>Market Value</u>	<u>Actuarial Value</u>
PLAN A	2001	-4.2%	4.5%
	2002	-1.8%	1.1%
	2003	4.4%	-1.0% *
	2004	9.6%	3.5%
	2005	7.2%	9.6% *
	2006	8.6%	10.7% *
	2007	18.1% †	10.8% †
	2008	1.1%	9.0%
	2009	-13.8% †*	0.9% †*
	2010	11.0%	5.9%

		<u>Market Value</u>	<u>Actuarial Value</u>
PLAN B	2001	-4.2%	4.2%
	2002	-2.8%	0.3%
	2003	3.8%	-1.8% *
	2004	9.7%	3.1%
	2005	7.2%	6.4% *

2006	8.5%	13.7% *
2007	17.4% †	10.6% †
2008	1.3%	8.8%
2009	-13.7% †*	0.9% †*
2010	10.9%	5.8%

* Includes the effect of a change in asset valuation method.

† Includes the impact of inclusion of the prior period adjustment for investment income as income in fiscal year.

The market rate of return gives a measure of investment return on a total return basis and includes realized and unrealized capital gains and losses as well as interest income. This rate of return gives an indication of performance for an actively managed portfolio where securities are bought and sold with the objective of producing the highest total rate of return. During 2010, the fund earned \$9,361,893 of dividends and interest and other recurring income for Plan A and \$1,935,813 for Plan B. Net income was increased by realized and unrealized capital gains of \$58,120,482 for Plan A and \$11,969,881 for Plan B and further reduced by net investment expenses of \$5,414,086 for Plan A and \$1,120,701 for Plan B. The geometric mean of the market value rates of return measured over the last ten years was 3.7% for Plan A and 3.5% for Plan B.

The actuarial rate of return is presented for comparison to the assumed long-term rate of return of 8% used for the valuation. This rate is calculated based on the actuarial value of assets and all interest, dividends, other investment income, and capital gains or losses as given in Exhibit VI for Plan A and Exhibit XVII for Plan B, adjusted for any change in asset determination methodology. Investment income used to calculate this yield is based upon a smoothing of gains or losses over a five-year period. The difference between rates of return on an actuarial and market value basis results from the smoothing of gains or losses on investments relative to the valuation interest rate. In addition to the smoothing of investment returns above or below the assumed rate of return of 8.0%, the actuarial and market rates of return differ due to the allocation of expense fund assets and income to both Plan A and Plan B. Yields in excess of the 8% assumption will reduce future costs; yields below 8% will increase future costs. Plan A experienced net actuarial investment earnings of \$13,707,795 less than the actuarial assumed earnings rate of 8%. Plan B experienced net actuarial investment earnings of \$3,000,031 less than the actuarial assumed earnings rate of 8%. These actuarial losses increased the normal cost accrual rate by 1.1827% and 0.6253% respectively for Plan A and Plan B.

At the end of each fiscal year, a review of the data is made to identify current members of Plan A and Plan B who have consecutive service credit in both plans that have not been addressed in previous transfers of assets and liabilities between the Plan A and Plan B trust funds pursuant to the provisions of R.S. 11: 1862(F). In the course of reviewing data for the June 30, 2010 valuation we found three members of Plan A and no members of Plan B with such service and therefore recommend a transfer of \$42,619 be made from the Plan B trust to the Plan A trust for fiscal 2010.

PLAN A – DEMOGRAPHICS AND LIABILITY EXPERIENCE

A reconciliation of the census for Plan A is given in Exhibit X. The average active member is 48 years old with 10.49 years of service and an annual salary of \$32,073. The Plan's active

membership increased during the fiscal year by 16 members. The plan has experienced a decline in the active plan population of 221 members between 2005 and 2010. Should the five year trend in plan population continue, a change in the structure of the amortization of the frozen unfunded actuarial accrued liability will be required to prevent continual increases in contributions as a percentage of payroll. Review of the active census by age indicates that over the last ten years the population in the under-fifty age group has decreased while the proportion of active members over-fifty increased. Over the same ten-year period the plan showed a decrease in the percentage of members with service greater than five but less than fifteen years; the percentage of members with service over fifteen years and less than five years of service has increased.

The average retiree is 70 years old with a monthly benefit of \$1,378. The number of retirees and beneficiaries receiving benefits from the system increased by 46 during the fiscal year. Over the last five years the number of retirees has increased by 395; during this same period, annual benefits in payment increased by \$10,972,511.

Plan liability experience for fiscal 2010 was favorable. The primary factors contributing to the reduction in cost were retirements and disabilities below projected levels and salary increases below projected levels. Partially offsetting these factors were withdrawals and retiree deaths which were below projections, and DROP entries above projections. The net effect of all of these elements was a decrease in costs. Plan liability gains decreased the normal cost accrual rate by 0.9625%.

PLAN B – DEMOGRAPHICS AND LIABILITY EXPERIENCE

A reconciliation of the census for Plan B is given in Exhibit XXI. The average active member is 48 years old with 9.44 years of service and an annual salary of \$29,696. The Plan's active membership decreased during the fiscal year by 72 members. Over the last five years the active population increased by 159 members. A review of the active census by age indicates that over the last ten years the population in the under 50 age group has decreased while the proportion of active members over age 60 has increased. Over the same ten-year period the system showed a decrease in the percentage of members with service of five to fourteen years and a corresponding increase in the percentage of members with service under five years and over twenty-five years.

The average retiree is 73 years old with a monthly benefit of \$822. The number of retirees and beneficiaries receiving benefits from the system increased by three. Over the last five years this group increased by 91; during this same period, annual benefits in payment increased by \$1,689,285.

Plan liability experience for fiscal 2010 was favorable. Salary increases were below projected levels. Retirements and disabilities were below projected levels. These factors tend to decrease costs. Partially offsetting these factors were DROP entries significantly exceeding projected levels, withdrawals slightly below projected levels, and retiree deaths below projections. Plan liability gains decreased the normal cost accrual rate by 0.4202%.

FUNDING ANALYSIS AND RECOMMENDATIONS

Actuarial funding of a retirement system is a process whereby funds are accumulated over the working lifetimes of employees in such a manner as to have sufficient assets available at retirement

to pay for the lifetime benefits accrued by each member of the system. The required contributions are determined by an actuarial valuation based on rates of mortality, termination, disability, and retirement, as well as investment return and other statistical measures specific to the particular group. Each year a determination is made of two cost components, and the actuarially required contributions are based on the sum of these two components plus administrative expenses. These two components are the normal cost and the amortization payment on the unfunded actuarial accrued liability. The normal cost refers to the portion of annual cost based on the salary of active participants. The term unfunded accrued liability (UAL) refers to the excess of the present value of plan benefits over the sum of current assets and future normal costs. Each year the UAL grows with interest and is reduced by payments. Under the funding method used for both plans, changes in plan experience, benefits, or assumptions do not affect the unfunded actuarial accrued liability. These items increase or decrease future normal costs.

In order to establish the actuarially required contribution in any given year, it is necessary to define the assumptions, funding method, and method of amortizing the UAL. Thus, the determination of what contribution is actuarially required depends upon the funding method and amortization schedules employed. Regardless of the method selected, the ultimate cost of providing benefits is dependent upon the benefits, expenses, and investment earnings. Only to the extent that some methods accumulate assets more rapidly and thus produce greater investment earnings does the funding method affect the ultimate cost.

For Plan A, the derivation of the actuarially required contribution for the current fiscal year is given in Exhibit I. The normal cost for fiscal 2011 as of July 1, 2010, is \$25,342,972. The amortization payment on the plan's frozen unfunded actuarial accrued liability as of July 1, 2010, is \$5,329,727. The total actuarially required contribution is determined by adjusting these two values for interest (since payments are made throughout the fiscal year) and adding estimated administrative expenses. As given on line 15 of Exhibit I, the total actuarially required contribution for fiscal 2011 is \$32,574,340. When this amount is reduced by projected tax contributions and revenue sharing funds the resulting employers' net direct actuarially required contribution for fiscal 2011 is \$27,443,695. This is 16.41% of the projected Plan A payroll for fiscal 2011.

Liability and asset experience as well as changes in assumptions and benefits can increase or lower plan costs. In addition to these factors, any COLA granted in the prior fiscal year will increase required contributions. New entrants to the system can also increase or lower costs as a percent of payroll depending upon their demographic distribution and other factors related to prior plan experience. Finally, contributions above or below requirements may reduce or increase future costs.

The effects of various factors on the cost structure for Plan A are outlined below:

Normal Cost Accrual Rate – Fiscal 2010	13.9231%
Factors Increasing the Normal Cost Accrual Rate:	
Contribution Loss	0.0423%
Liability Assumption Loss	2.9170%
Investment Loss	1.1827%

Factors Decreasing the Normal Cost Accrual Rate:

New Members	-0.4691%
Liability Experience	-0.9624%

Normal Cost Accrual Rate – Fiscal 2011 16.6336%

For Plan B, the derivation of the actuarially required contribution for the current fiscal year is given in Exhibit XII. The normal cost for fiscal 2011 as of July 1, 2010, is \$6,123,501. The amortization payment on the plan's frozen unfunded actuarial accrued liability as of July 1, 2010, is \$609,400. The total actuarially required contribution is determined by adjusting these two values for interest (since payments are made throughout the fiscal year) and adding estimated administrative expenses. As given on line 15 of Exhibit XII, the total actuarially required contribution for fiscal 2011 is \$7,277,329. When this amount is reduced by projected tax contributions and revenue sharing funds the resulting employers' net direct actuarially required contribution for fiscal 2011 is \$5,218,025. This is 7.78% of the projected Plan B payroll for fiscal 2011.

The effects of various factors on the cost structure for Plan B are outlined below:

Normal Cost Accrual Rate – Fiscal 2010	8.1774%
Factors Increasing the Normal Cost Accrual Rate:	
Liability Assumption Loss	1.9805%
Asset Experience	0.6253%
Factors Decreasing the Normal Cost Accrual Rate:	
New Members	-0.2237%
Liability Experience	-0.4202%
Normal Cost Accrual Rate – Fiscal 2011	10.1393%

In addition to the above factors, payroll growth affects plan costs to the extent that payments on the system's unfunded liability are on a schedule that varies from actual trends in payroll growth or decline. If payroll changes at rates not consistent with the amortization schedule, the result will be costs that change as a percentage of payroll. For fiscal 2011, the net effect of the change in payroll on amortization costs was an increase of 0.01% of payroll for Plan A; and a reduction of 0.03% for Plan B. Required net direct employer contributions are also affected by the available ad valorem taxes and revenue sharing funds which the system receives each year. When these funds change as a percentage of payroll, net direct employer contributions are adjusted accordingly. We estimate that these funds collected in fiscal 2011 will be level as a percent of payroll in Plan A and will increase by 0.01% of payroll in Plan B. Although the actuarially required net direct employer contribution rate for Plan A for fiscal 2011 is 16.41%, the actual employer contribution rate for fiscal 2011 is 14.25% of payroll. After accounting for the anticipated contribution shortfall in fiscal 2011 and rounding the result to the nearest 0.25% as required by R. S. 11:103, we recommend a minimum net direct employer contribution rate of 16.75% for fiscal 2012 for Plan A. Although the actuarially required net direct employer contribution rate in Plan B is 7.78%, the actual employer contribution rate for fiscal 2010 is 6.75% of payroll. After accounting for the anticipated contribution shortfall in fiscal 2011 and rounding the result to the nearest 0.25% as required by R.S. 11:103, we recommend a minimum net direct employer contribution rate of 8.00% for fiscal 2012 for Plan B.

Although the actuarially required net direct employer contribution rate for Plan B for fiscal 2011 is 7.78%, the actual employer contribution rate for fiscal 2011 is 6.75% of payroll. After accounting for the anticipated contribution shortfall in fiscal 2011 and rounding the result to the nearest 0.25% as required by R.S. 11:103, we recommend a minimum net direct employer contribution rate of 8.00% for fiscal 2012 in Plan B.

As a result of the freeze in the employer contribution rate for fiscal 2010, Plan B collected excess employer contributions. In accordance with Act 296 of the 2009 legislative session, the excess contributions were credited to the Funding Deposit Account. The account balance as of June 30, 2009 was \$6,105,938 for Plan A and \$1,806,555 for Plan B. Interest at the valuation interest rate was added to each Funding Deposit Account. An additional contribution excess of \$357,684 was added in Plan B.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions, changes in economic or demographic assumptions, completion of amortization payments or credit schedules, and changes in plan provisions or applicable law. Analysis of the effect of all these factors is beyond the scope of this report. We have, however, calculated the sensitivity of the plans' costs to two factors. First, we have determined that based on current assets and demographics, for each percentage earnings in a single year under (over) the assumed rate of return on the actuarial value of assets, there will be a corresponding increase (reduction) in the normal cost accrual rate of 0.61% for Plan A, and 0.31% for Plan B. We have also determined that a 1% reduction in the valuation interest rate for each Plan would increase the actuarially required contribution rate for fiscal 2011 by 9.10% in Plan A and 4.80% in Plan B.

Notwithstanding recent contribution increases, a significant portion of investment losses incurred in fiscal 2009 have not yet been released into the actuarial value of assets due to the current asset smoothing methodology. These losses will be released over the next three years and, even when the investment gains for the fiscal 2010 are factored in, this will put upward pressure on costs as they are released into income unless they are offset by substantial asset or liability gains.

COST OF LIVING INCREASES

During fiscal 2010 the actual cost of living (as measured by the US Department of Labor CPI-U) increased by 1.05%. Cost of living provisions for the system are detailed in R.S. 11:1761 and R.S. 11:246. The former statute allows the board to use interest earnings in excess of the normal requirements to grant annual cost of living increases of 2% of each retiree's original benefit. R.S. 11:246 provides cost of living increases of retirees and beneficiaries over the age of 65 equal to 2% of the benefit in payment on October 1, 1977, or the date the benefit was originally received if retirement commenced after that date. R.S. 11:241 provides that cost of living benefits shall be in the form (unless the board otherwise specifies) of $\$X \times (A+B)$ where X is at most \$1 and "A" represents the number of years of credited service accrued at retirement or at death of the member or retiree and "B" is equal to the number of years since retirement or since death of the member or retiree to June 30th of the initial year of such increase. The provisions of this subpart do not repeal provisions relative to cost of living adjustments contained within the individual laws governing

systems; however, they are to be controlling in cases of conflict. All of the above provisions require that the system earn sufficient excess interest earnings to fund the increases. In addition, the ratio of the plan's assets to benefit obligations must meet the criteria established in R.S. 11:242. This section sets forth a minimum "target ratio" of the actuarial value of assets to the Pension Benefit Obligation. We have determined that for fiscal 2010, neither plan met the target ratio. In addition, neither plan had excess interest earnings; hence no cost of living increase is payable to regular retirees.

SUMMARY OF PRINCIPAL PLAN PROVISIONS

All members of the Municipal Employees' Retirement System are participants in either Plan A or B according to the provisions of the agreement entered into by their employer. All employees of a participating employer must participate in the same plan. The principal provisions of each plan are given below. The following summary of plan provisions as of June 30, 2010, is for general informational purposes only and does not constitute a guarantee of benefits.

MEMBERSHIP - All persons who are actively employed by a participating employer on a permanent, regularly scheduled basis of at least an average of thirty-five hours per week are members of this system. Excluded from membership are members of city councils, alderman, town councilmen, and constables; the exclusion does not apply to persons serving in excluded positions on January 1, 1997.

PLAN A PROVISIONS:

CONTRIBUTION RATES - Employee contributions in Plan A are 9.25% of the member's earnings. In addition, each sheriff and ex officio tax collector deducts one-fourth of one percent of the aggregate amount of the tax shown to be collected by the tax roll of each respective parish, excepting Orleans Parish, and remits the money to the system on an annual basis. Taxes are apportioned between Plan A and Plan B in proportion to salaries of plan participants. Taxes received from East Baton Rouge Parish are apportioned between the Municipal Employees' Retirement System and the Employees' Retirement System of the City of Baton Rouge. The system also receives revenue sharing funds each year as appropriated by the legislature. The remaining employer contributions are determined according to actuarial requirements and are set annually.

RETIREMENT BENEFITS - Members with ten years of creditable service may retire at age sixty; members with twenty-five years of service may retire regardless of age. The monthly retirement allowance is equal to three percent of the member's final compensation multiplied by his years of creditable service; elected officials receive an additional one-half percent of final compensation for each year of such elected service. However, the accrued retirement benefits for those employees who were members of only the supplemental plan prior to October 1, 1978, are based on one percent of final compensation plus two dollars per month for each year of service credited prior to October 1, 1978. The retirement allowance may not exceed the greater of final annual salary or one hundred percent of the member's final average compensation. Members with twenty years of service credit, not otherwise eligible for normal retirement, are eligible for a modified actuarially reduced early retirement.

DISABILITY BENEFITS - Five years of creditable service are required in order to be eligible for disability benefits. Twenty years of creditable service are required in order for a member to have a vested disability benefit. A disabled member receives a normal retirement allowance if eligible under regular retirement provisions; if he is not eligible for a normal retirement, he receives a disability benefit equal to the lesser of:

- 1) Forty-five percent of his final average compensation or three percent of his final average compensation multiplied by his years of creditable service, whichever is greater; or
- 2) Three percent of his final average compensation multiplied by his years of creditable service projected to his earliest normal retirement age.

SURVIVOR BENEFITS - Five years of creditable service are required in order to be eligible for survivor benefits. If the member is eligible for normal retirement at the time of death, the surviving spouse receives an automatic option two benefit. If the member is not eligible for a normal retirement, the surviving spouse with minor children receives sixty percent of final compensation payable until no child in her care satisfies the definition of minor child. The surviving spouse with no minor children receives forty percent of final compensation payable upon attainment of age sixty by the spouse, or the actuarial equivalent of this amount payable immediately (such equivalent not to be less than 20% of final compensation). Minor children with no surviving unmarried parent receive thirty percent of final compensation each not to exceed a total of sixty percent of final compensation. Survivor benefits are also payable to the surviving spouse's of former members who have not withdrawn their accumulated contributions and who have at least twenty years of creditable service. The benefits payable are the actuarial equivalent of the Option 2 benefits that would have become payable to the surviving spouse at the time the former member would have begun receiving deferred normal retirement benefits, had the member survived until that date, elected Option 2, and died at that time.

PLAN B PROVISIONS:

CONTRIBUTION RATES - Employee contributions in Plan B are 5.00% of the member's earnings. In addition, each sheriff and ex officio tax collector deducts one-fourth of one percent of the aggregate amount of the tax shown to be collected by the tax roll of each respective parish, excepting Orleans Parish, and remits the money to the system on an annual basis. Taxes are apportioned between Plan A and Plan B in proportion to salaries of plan participants. Taxes received from East Baton Rouge Parish are apportioned between the Municipal Employees' Retirement System and the Employees' Retirement System of the City of Baton Rouge. The system also receives revenue sharing funds each year as appropriated by the legislature. The remaining employer contributions are determined according to actuarial requirements and are set annually.

RETIREMENT BENEFITS - Members with ten years of creditable service may retire at age sixty; members with thirty years of service may retire at any age. The monthly retirement allowance is equal to two percent of the member's final compensation multiplied by his years of creditable service; elected officials receive an additional one-half percent of final compensation for each year of such elected service.

DISABILITY BENEFITS - Ten years of creditable service are required in order to be eligible for disability benefits. Twenty years of creditable service are required in order for a member to have a vested disability benefit. A disabled member receives a normal retirement allowance if eligible under regular retirement provisions; if he is not eligible for a normal retirement allowance, he receives a disability benefit equal to the lesser of:

- 1) Thirty percent of his final average compensation or two percent of his final average compensation multiplied by his years of creditable service, whichever is greater; and
- 2) Two percent of his final average compensation multiplied by his years of creditable service projected to his earliest normal retirement age.

SURVIVOR BENEFITS - The surviving spouse of a member who was eligible for normal retirement at the time of death receives an automatic option two benefit. The surviving spouse of a member with five or more years of creditable service and not eligible for normal retirement at the time of death receives either 30% of the member's final compensation payable to the spouse when they attain age 60 or an actuarial equivalent of 30% of the deceased member's final compensation, but not less than 15% of such final compensation. Survivor benefits are also payable to the surviving spouse's of former members who have not withdrawn their accumulated contributions and who have at least twenty years of creditable service. The benefits payable are the actuarial equivalent of the Option 2 benefits that would have become payable to the surviving spouse at the time the former member would have begun receiving deferred normal retirement benefits, had the member survived until that date, elected Option 2, and died at that time.

PROVISIONS APPLICABLE TO BOTH PLAN A AND B:

FINAL AVERAGE COMPENSATION – For a member whose first employment making him eligible for membership in the system began on or before June 30, 2006, final average compensation is based on the average monthly earnings during the highest thirty-six consecutive months or joined months if service was interrupted. The earnings to be considered for each twelve month period within the thirty-six month period shall not exceed 125% of the preceding twelve month period.

For a member whose first employment making him eligible for membership in the system began after June 30, 2006, final average compensation is based on the average monthly earnings during the highest sixty consecutive months or joined months if service was interrupted. The earnings to be considered for each twelve month period within the thirty-six month period shall not exceed 125% of the preceding twelve month period.

UNUSED SICK & ANNUAL LEAVE – All unused sick and annual leave is credited at the time of retirement to the member if the employer so elects for his employees. The actuarial cost of providing this conversion is borne solely by the employer and must be paid to the board within thirty days of the member's retirement date.

OPTIONAL ALLOWANCES - Members may receive their benefits as a life annuity, or in lieu of such a reduced benefit according to the option selected which is the actuarial equivalent of the maximum benefit.

Option 2 - Upon retirement, the member receives a reduced benefit. Upon the member's death, the designated beneficiary will continue to receive the same reduced benefit.

Option 3 - Upon retirement, the member receives a reduced benefit. Upon the member's death, the designated beneficiary will receive one-half of the member's reduced benefit.

Option 4 - Upon retirement, the member elects to receive a board-approved benefit which is actuarially equivalent to the maximum benefit.

A member may also elect to receive an actuarially reduced benefit which provides for an automatic 2 ½% annual compound increase in monthly retirement benefits based on the reduced benefit and commencing on the later of age fifty-five or retirement anniversary; this COLA is in addition to any ad hoc COLAs which are payable.

DEFERRED RETIREMENT OPTION PLAN - In lieu of terminating employment and accepting a service retirement allowance, any member of Plan A or B who is eligible for a normal retirement may elect to participate in the Deferred Retirement Option Plan (DROP) for up to three years and defer the receipt of benefits. Upon commencement of participation in the plan, membership in the system terminates. During participation in the plan, employer contributions are payable but employee contributions cease. The monthly retirement benefits that would have been payable, had the person elected to cease employment and receive a service retirement allowance, are paid into the DROP account. After a member terminates his participation in DROP his account will earn interest at the actual rate of return earned on the funds left on deposit as certified by the custodian of the system's assets. This interest will be credited to the individual member's account balance on a daily basis beginning July 1, 2006. In addition, no cost of living increases are payable to participants until employment which made them eligible to become members of the system has been terminated for at least one full year.

Upon termination of employment prior to, or at the end of, the specified period of participation, a participant in the plan may receive, at his option, a lump sum payment from the account equal to the payments into the account, a true annuity based upon his account balance in that fund, or any other method of payment if approved by the board of trustees. The monthly benefits that were being paid into the DROP account will begin to be paid to the retiree. If a participant dies during the participation in the plan, a lump sum equal to his account balance in the plan fund shall be paid to his named beneficiary or, if none, to his estate. If employment is not terminated at the end of the three years, payments into the plan fund cease and the person resumes active contributing membership in the system. For any member hired prior to July 1, 2006, additional accrued benefits are based on final average compensation used to calculate the member's original benefit unless the additional period of service is at least thirty-six months. For any member hired on or after July 1, 2006, whose period of additional service after their DROP participation period ends is less than sixty months, the final compensation figure used to calculate the additional benefit will be that used to calculate the original benefit. If their period of additional service is sixty months or more, the final compensation figure used to calculate the additional benefit will be based on their compensation during the period of additional service.

COST OF LIVING INCREASES - The board of trustees is authorized to grant retired members, and widows of members, who have been retired for at least one full year an annual cost of living increase of two percent of their original benefit and all retired members and widows who are sixty-five years of age and older a two percent increase in their original benefit (or their benefit as of

October 1, 1977, if they retired prior to that time). In order for the board to grant either of these increases the system must meet certain criteria detailed in the statute related to funding status and interest earnings on investments. In lieu of other cost of living increases the board may grant an increase to retirees in the form " $X \times (A \& B)$ " where "A" is equal to the number of years of credited service accrued as retirement or death of the member or retiree and "B" is equal to the number of years since death of the member or retiree to June 30 of the initial year of increase and "X" is equal to any amount available for funding such increase up to a maximum of \$1.00.

ACTUARIAL ASSUMPTIONS

In determining actuarial costs, certain assumptions must be made regarding future experience under the plan. These assumptions include the rate of investment return, mortality of plan members, rates of salary increase, rates of retirement, rates of termination, rates of disability, and various other factors that have an impact on the cost of the plan. To the extent that future experience varies from the assumptions selected for valuation, future costs will be either higher or lower than anticipated. The effect of emerging experience on the fund is illustrated by the following chart.

Factor	Increase in Factor Results in
Investment Earnings Rate	Decrease in Cost
Annual Rate of Salary Increase	Increase in Cost
Rates of Retirement	Increase in Cost
Rates of Termination	Decrease in Cost
Rates of Disability	Increase in Cost
Rates of Mortality	Decrease in Cost

ACTUARIAL COST METHOD: Frozen Attained Age Normal Actuarial Cost Method with allocation based on earnings. The frozen actuarial accrued liabilities were calculated on the projected unit credit cost method.

ACTUARIAL ASSET VALUES: Invested assets are valued at market value adjusted to defer four-fifths of all earnings above or below the valuation interest rate in the valuation year, three-fifths of all earnings above or below the valuation interest rate in the prior year, two-fifths of all earnings above or below the valuation interest rate from two years prior, and one-fifth of all earnings above or below the valuation interest rate from three years prior. The resulting smoothed values are subject to a corridor of 85% to 115% of the market value of assets. If the smoothed value falls outside the corridor, the actuarial value is set equal to the average of the corridor limit and the smoothed value.

VALUATION INTEREST RATE: 8% (Net of Investment Expense)

ANNUAL SALARY INCREASE RATE: 6% (3.25% Inflation / 2.75% Merit)

ACTIVE MEMBER MORTALITY: RP 2000 Employee Table for males and females

**ANNUITANT, AND
BENEFICIARY MORTALITY:** RP 2000 Healthy Annuitant Table for males and females

RETIREE COST OF LIVING INCREASES:

The present value of future retirement benefits is based on benefits currently being paid by the system and includes previously granted cost of living increases. The present values do not include provisions for potential future increases not yet authorized by the Board of Trustees.

RATES OF RETIREMENT:

The table of these rates is included later in the report. These rates apply only to those individuals eligible to retire. Members are assumed to retire no earlier than normal retirement age. In the first year of eligibility the tabular rates are multiplied by 1.5.

RETIREMENT LIMITATIONS:

Projected retirement benefits are not subjected to IRS Section 415 limits.

DROP ENTRY RATES:

The table of these rates is included later in the report. These rates apply only to those individuals eligible to participate in DROP. In the first year of eligibility the tabular rates are multiplied by 1.5.

DROP PARTICIPATION PERIOD:

All DROP participants are assumed to participate for 3 years and retire at the end of this participation period.

RETIREMENT RATES FOR ACTIVE FORMER DROP PARTICIPANTS:

Retirement rates for active former DROP participants are as follows:

Ages	Retirement Rates
Below 89	0.19
90	1.00

RATES OF WITHDRAWAL:

The rates of withdrawal are applied based upon completed years of service according to the following table:

<u>Service</u>	<u>Plan A</u>	<u>Plan B</u>
0	0.24	0.26
1	0.19	0.20
2	0.16	0.15
3	0.12	0.15
4	0.10	0.10
5	0.08	0.10
6	0.08	0.09
7	0.08	0.09
8	0.06	0.06
9	0.06	0.05
10	0.06	0.05

11	0.05	0.05
12	0.05	0.05
13	0.05	0.05
14	0.03	0.05
15	0.03	0.05
16	0.03	0.03
17	0.01	0.03
18	0.01	0.03
19	0.01	0.03
20	0.01	0.02
over 20	0.01	0.02

Note: The withdrawal rate for individuals eligible to retire is assumed to be zero.

RATES OF DISABILITY: 20% of the disability rates used for the 21st valuation of the Railroad Retirement System for individuals with 10 – 19 years of service.

MARRIAGE STATISTICS: 80% of the members are assumed to be married; husbands are assumed to be three years older than wives.

FAMILY STATISTICS: Assumptions utilized in determining the costs of various survivor benefits as listed below, are derived from the information provided in the 2000 U. S. Census:

Member's <u>Age</u>	% With <u>Children</u>	Number of <u>Children</u>	Avg. <u>Age</u>
25	62%	1.7	6
35	82%	2.1	10
45	66%	1.8	13
55	19%	1.4	15
65	2%	1.4	15

DISABLED LIVES MORTALITY: RP-2000 Disabled Lives Mortality Tables for Males and Females

VESTING ELECTING PERCENTAGE: 30% of those members under age 40 who are terminated vested elect deferred benefits in lieu of contribution refunds. 45% of those who are between the ages of 40 - 49 who are terminated vested elect deferred benefits in lieu of contribution refunds. 60% of those who are at least age 50 who are terminated vested elect deferred benefits in lieu of contribution refunds.

PRIOR YEAR'S ACTUARIAL ASSUMPTIONS

ANNUITANT MORTALITY: 1994 Uninsured Pensioners' Table set forward 2 years (male mortality is based on 2 year set forward of the male table and female mortality is based on 2 year set forward of the female table)

RETIREMENT RATES FOR ACTIVE FORMER DROP PARTICIPANTS: Retirement rates for active former DROP participants are as follows:

Ages	Retirement Rates
Below 89	0.21
90	1.00

RATES OF DISABILITY: 25% of the disability rates used for the 21st valuation of the Railroad Retirement System for individuals with 10 – 19 years of service.

Note: All assumptions not listed above, or changed within the published table of rates, remained unchanged

* Disability rates as displayed were base rates which were multiplied by a constant of 25%

GLOSSARY

Accrued Benefit – The pension benefit that an individual has earned as of a specific date based on the provisions of the plan and the individual's age, service, and salary as of that date.

Actuarial Accrued Liability – The actuarial present value of benefits payable to members of the fund less the present value of future normal costs attributable to the members.

Actuarial Assumptions - Assumptions as to the occurrence of future events affecting pension costs. These assumptions include rates of mortality, withdrawal, disablement, and retirement. Also included are rates of investment earnings, changes in compensation, as well as statistics related to marriage and family composition.

Actuarial Cost Method – A procedure for determining the portion of the cost of a pension plan to be allocated to each year. Each cost method allocates a certain portion of the actuarial present value of benefits between the actuarial accrued liability and future normal costs. Once this allocation is made, a determination of the normal cost attributable to a specific year can be made along with the payment to amortize any unfunded actuarial accrued liability. To the extent that a particular funding method allocates a greater (lesser) portion of the actual present value of benefits to the actuarial accrued liability it will allocate less (more) to future normal costs.

Actuarial Equivalence – Payments or receipts with equal actuarial value on a given date when valued using the same set of actuarial assumptions.

Actuarial Gain (Loss) – The financial effect on the fund of the difference between the expected and actual experience of the fund. The experience may be related to investment earnings above (or below) those expected or changes in the liability structure due to fewer (or greater) than the expected numbers of retirements, deaths, disabilities, or withdrawals. In addition, other factors such as pay increases above (or below) those forecast can result in actuarial gains or losses. The effect of such gains (or losses) is to decrease (or increase) future costs.

Actuarial Present Value - The value, as of a specified date, of an amount or series of amounts payable or receivable thereafter, with each amount adjusted to reflect the time value of money (through accrual of interest) and the probability of payments. For example: if \$600 invested today will be worth \$1,000 in 10 years and there is a 50% probability that a person will live 10 years, then the actuarial present value of \$1,000 payable to that person if he should survive 10 years is \$300.

Actuarial Value of Assets - The value of cash, investments, and other property belonging to the pension plan as used by the actuary for the purpose of the actuarial valuation. This may correspond to the book value, market value, or some modification involving either or both book and market value. Adjustments to market values are often made to reduce the volatility of asset values.

Asset Gain (Loss) - That portion of the actuarial gain attributable to investment performance above (below) the expected rate of return in the actuarial assumptions.

Amortization Payment - That portion of the pension plan contribution designated to pay interest and reduce the outstanding principal balance of unfunded actuarial accrued liability. If the amortization payment is less than the accrued interest on the unfunded actuarial accrued liability the outstanding principal balance will increase.

Contribution Shortfall (Excess) - The difference between contributions recommended in the prior valuation and the actual amount received.

Decrements – Events which result in the termination of membership in the system such as retirement, disability, withdrawal, or death.

Employer Normal Cost - That portion of the normal cost not attributable to employee contributions. It includes both direct contributions made by the employer and contributions from other non-employee sources such as revenue sharing and revenues related to taxes.

Funded Ratio – A measure of the ratio of assets to liabilities of the system according to a specific definition of those two values. Typically the assets used in the measure are the actuarial value of assets; the liabilities are defined by reference to some recognized actuarial funding method. Thus the funded ratio of a plan depends not only on the financial strength of the plan but also on the funding method used to determine the liabilities and the asset valuation method used to determine the assets in the ratio.

Normal Cost - That portion of the actuarial present value of pension plan benefits and expenses allocated to a valuation year by the actuarial cost method. This is analogous to one year's insurance premium.

Pension Benefit Obligation - The actuarial present value of benefits earned or credited to date based on the members expected final average compensation at retirement. For current retirees or terminated members this is equivalent to the actuarial present value of their accrued benefit.

Projected Benefits – The benefits expected to be paid in the future based on the provisions of the plan and the actuarial assumptions. The projected values are based on anticipated future advancement in age and accrual of service as well as increases in salary paid to the participant.

Unfunded Actuarial Accrued Liability - The excess of the actuarial accrued liability over the actuarial value of assets.

Vested Benefits - Benefits that the members are entitled to even if they withdraw from service.
