ARIZONA CORRECTIONS OFFICER RETIREMENT PLAN CONSOLIDATED REPORT

October 16, 2014
The Board of Trustees
Arizona Corrections Officer Retirement Plan
Phoenix, Arizona

## Re: Arizona Corrections Officer Retirement Plan Actuarial Valuation as of June 30, 2014

Ladies and Gentlemen:
The results of the June 30, 2014 annual actuarial valuation of members covered by the Arizona Corrections Officer Retirement Plan (CORP) are presented in this report. The purpose of the valuation was to measure the System's funding progress, provide actuarial information in connection with applicable Governmental Accounting Standards Board Statements and to determine the employer contribution for the 2015-2016 fiscal year. The funding objective is stated in Article 4, Chapter 5, Title 38, Sections 843B and 848N of the Arizona Revised Statutes. In addition, this consolidated report provides summary information for CORP participating employers. This report should not be relied upon for any other purpose. This report may be distributed to parties other than the System only in its entirety and only with the permission of the Board.

The valuation was based upon information, furnished by the State Retirement System, concerning Retirement System benefits, financial transactions, and individual members, terminated members, retirees and beneficiaries. Data was checked for internal and year to year consistency, but was not otherwise audited by us. As a result, we are unable to assume responsibility for the accuracy or completeness of the data provided.

Future actuarial measurements may differ significantly from those presented in this report due to such factors as experience differing from that anticipated by actuarial assumptions, changes in plan provisions, actuarial assumptions/methods or applicable law. Due to the limited scope of this assignment, we did not perform an analysis of the potential range of future measurements.

To the best of our knowledge, this report is complete and accurate and the valuation was conducted in accordance with standards of practice prescribed by the Actuarial Standards Board and in compliance with the applicable state statutes. Mark Bis, James D. Anderson and Francois Pieterse are independent of the plan sponsor and are Members of the American Academy of Actuaries (MAAA) who meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. It is our opinion that the actuarial assumptions used for the valuation produce results which are reasonable.

Respectfully submitted,

James D. Anderson
FA, EA, MAAA

Francois Pieterse ASA, MAMA

## EXECUTIVE SUMMARY/BOARD SUMMARY

## 1. Required Employer Contributions to Support Retirement Benefits

The computed employer contribution and funded status for the fiscal year beginning July 1, 2015 is shown below.

| Averages | Pension | Health | Total |
| :--- | :---: | :---: | :---: |
| Employer Contribution Rate | $17.99 \%$ | $0.22 \%$ | $18.21 \%$ |
| Funded Status | $57.3 \%$ | $105.2 \%$ | $59.0 \%$ |

## 2. Contribution Rate Comparison

The chart below compares the results for this valuation of the Retirement System with the results of the prior year's valuation:

| Valuation Date | Pension | Health | Total |
| :---: | :---: | :---: | :---: |
| $6 / 30 / 2013$ | $13.23 \%$ | $1.23 \%$ | $14.46 \%$ |
| $6 / 30 / 2014$ (prior to phase-in) | $17.99 \%$ | $0.22 \%$ | $18.21 \%$ |
| $6 / 30 / 2014$ (after phase-in) | $14.82 \%$ | $0.22 \%$ | $15.04 \%$ |

Please note that the pension contribution rate increased significantly for most employers. This arose primarily due to the repeal of certain aspects of SB1609 which resulted in much larger recognition of liabilities related to Permanent Benefit Increases (PBI). The contribution rate also increased due to the continued recognition of 2008-2009 asset losses, or in some cases population movements. While it is recommended that employers contribute the full amount, the Board adopted a policy to allow employers to phase-in the pension contribution rate increase over 3 years, if necessary. Employers that have funded ratios below $50 \%$ are strongly encouraged to contribute the full amount prior to phase-in.

## EXECUTIVE SUMMARY/BOARD SUMMARY

## 3. Reasons for Change

In aggregate, changes in the contribution rate and funded status are illustrated on the following charts. The impact of each change will be different for each employer.

| Contribution Rate | Pension | Health | Total |
| :--- | :---: | :---: | :---: |
| Contribution Rate Last Valuation | $13.23 \%$ | $1.23 \%$ | $14.46 \%$ |
| PBI Effect | $3.47 \%$ | N/A | $3.47 \%$ |
| Asset Losses | $0.62 \%$ | N/A | $0.62 \%$ |
| Transfer of Assets to Health | $1.07 \%$ | $(1.07) \%$ | $0.00 \%$ |
| Other | $(0.40) \%$ | $0.06 \%$ | $(0.34) \%$ |
| Contribution Rate This Valuation | $17.99 \%$ | $0.22 \%$ | $18.21 \%$ |

| Funded Status | Pension | Health | Total |
| :--- | :---: | :---: | :---: |
| Funded Status Last Valuation | $69.7 \%$ | $0.0 \%$ | $66.9 \%$ |
| PBI Effect | $(6.8) \%$ | N/A | $(6.8) \%$ |
| Asset Losses | $(2.3) \%$ | N/A | $(2.3) \%$ |
| Transfer of Assets to Health | $(1.6) \%$ | $105.2 \%$ | $0.0 \%$ |
| Other | $(1.7) \%$ | $0.0 \%$ | $1.2 \%$ |
| Funded Status This Valuation | $57.3 \%$ | $105.2 \%$ | $59.0 \%$ |

The PBI effect is the result of increases in liability due to the reversal of SB1609. Asset losses are based on 7-year smoothing of assets and therefore primarily attributable to the market downturn in 2008-2009. A transfer of Assets to the Health Plan was also made this year. In accordance with IRS rules, assets dedicated to pay retiree health care benefits must be segregated from assets dedicated to pay pension benefits. The Board of Trustees provided this asset split for the year ending June 30, 2014. This resulted in an increase in the pension contribution with an equivalent decrease in the health contribution.

## EXECUTIVE SUMMARY/BOARD SUMMARY

## 4. Plan Experience

Experience during the year ended June 30, 2014 was overall unfavorable. On a market value basis, the System's return for the year ended June 30, 2014 was $13.2 \%$. However, the market value smoothing techniques used in this valuation of the System recognize both past and present investment gains and losses. The resulting actuarial asset yield for the year was $3.8 \%$. The effects of the asset losses phased-in from prior years were partially offset by gains attributable to demographic experience. Detailed information related to System experience is shown on page B-2.

## 5. Looking Ahead

The continuing effect of prior asset losses was dampened by the 7 -year smoothing period, and further offset by the effect of lower than expected pay increases. There remains $\$ 14$ million of unrecognized investment losses that will, in the absence of other gains, put upward pressure on the contribution rate next year. Next year is the last year of the recognition of the 2008/2009 asset loss.

In 2014 the Society of Actuaries published new mortality tables which include mortality improvement scales. While these tables were not developed specifically for the Public Sector, we recommend that the mortality assumption be reviewed in conjunction with the next regularly scheduled experience study.

## 6. Conclusion

The reversal of some of the provisions in SB1609 due to the Fields decision resulted in a significant increase in the contribution rate. If pending litigation in the Hall case is ruled in favor of the plaintiffs, contribution rates will increase again yet further. The Board adopted a provision allowing for up to a 3year phase-in of contribution rate increases in this valuation only.

## EXECUTIVE SUMMARY/BOARD SUMMARY

After accounting for active member contributions, the retired lives are less than fully funded on a funding value of assets basis, and much less than fully funded based upon the market value of assets (please see page B-4). It is most important that this plan receive contributions at least equal to the rates shown in this report.

## SECTION A

INTRODUCTION

## Funding ObJECTIVE

The purpose of the annual actuarial valuation of the Arizona Corrections Officer Retirement Plan as of June 30, 2014 is to:

- Compute the liabilities associated with benefits likely to be paid on behalf of current retired and active members. This information is contained in Section B.
- Compare accrued assets with accrued liabilities to assess the funded condition. This information is contained in Section B.
- Compute the employers' recommended contribution rates for the fiscal year beginning July 1, 2015. This information is contained in Section A.

This objective is stated in Article 4, Chapter 5, Title 38, Sections 843B and 848N of the Arizona Revised Statutes.

## CONTRIBUTION RATES

The Retirement System is supported by member contributions, employer contributions and investment income from Retirement System assets.

Contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:
(1) Cover the actuarial present value of benefits allocated to the current year by the actuarial cost method described in Section E (the normal cost); and
(2) Finance over a period of future years the actuarial present value of benefits not covered by valuation assets and anticipated future normal costs (the unfunded actuarial accrued liability).

Computed contribution rates for the fiscal year beginning July 1, 2015 are shown on page A-2.

## CONTRIBUTION REQUIREMENTS

## Development of Employer Contributions for the Indicated Valuation Date

|  | June 30, |  |
| :---: | :---: | :---: |
|  | 2013 | 2014 |
| Contribution for Fiscal Year Ending | 2015 | 2016 |
| Pension |  |  |
| Normal cost requirement |  |  |
| Service pensions | 10.77\% | 10.45\% |
| Disability pensions | 0.26 | 0.27 |
| Survivors of active members | 1.02 | 1.05 |
| Refunds of members' accumulated contributions | 3.13 | 3.18 |
| Total normal cost requirement | 15.18\% | 14.95\% |
| Less member contributions | 8.40 | 8.40 |
| Employer normal cost requirement | 6.78\% | 6.55\% |
| Amortization of unfunded liabilities | 6.45\% | 11.44\% |
| Total recommended pension contribution rate (before phase-in) | 13.23\% | 17.99\% |
| Total pension contribution rate (after phase-in) | N/A | 14.82\% |
| Health |  |  |
| Normal cost requirement | 0.34\% | 0.33\% |
| Amortization of unfunded liabilities | 0.89\% | (0.11)\% |
| Total health contribution requirement | 1.23\% | 0.22\% |
| Total contribution rate (before phase-in) | 14.46\% | 18.21\% |
| Total contribution rate (after phase-in) | N/A | 15.04\% |

Actuarial accrued liability, $\$ 2,734,560,372$, exceeded the funding value of assets, which was $\$ 1,613,311,913$. The unfunded actuarial accrued liabilities were amortized as a level percent of payroll over a closed period of 22 years ending on June 30, 2037 and added to the employer normal cost. The 22 -year period is a one year decrease from last year. The results shown above are prior to the application of the statutory minimum of $6 \%$ of payroll.

## Historical Summary of Employer Pension Rates

| Valuation Date June 30 | Fiscal Year <br> Ending June 30 | Normal Cost | Unfunded <br> Actuarial <br> Accrued Liability | Total |
| :---: | :---: | :---: | :---: | :---: |
| 2005 | 2007 | 4.64\% | (0.18)\% | 4.46\% |
| 2006 | 2008 | 6.07 | 0.65 | 6.72 |
| 2007 | 2009 | 7.10 | 1.55 | 8.65 |
| 2008 | 2010 | 6.10 | 1.39 | 7.49 |
| 2009 | 2011 | 6.43 | 2.14 | 8.57 |
| 2010 | 2012 | 6.67 | 2.83 | 9.50 |
| 2011 | 2013 | 6.47 | 4.84 | 11.31 |
| 2012 | 2014 | 7.50 | 6.18 | 13.68 |
| 2013 | 2015 | 7.12 | 7.34 | 14.46 |
| 2014* (before phase-in) | 2016 | 6.55 | 11.44 | 17.99 |
| 2014* (after phase-in) | 2016 | 6.55 | 8.27 | 14.82 |

2005 results were revised pursuant to changes enacted by the 2006 Legislature and the CORP Board of Trustees.

Results prior to 2009 were calculated by the prior actuary.

## DERIVATION OF EXPERIENCE GAIN/(LOSS)

Actual experience will never (except by coincidence) exactly match assumed experience. Gains and losses often cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of the experience gain (loss) is shown below, along with a year-by-year comparative schedule.

|  | June 30, |  |
| :--- | ---: | ---: |
|  | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4 * *}$ |
| (1) UAAL* at start of year | $\$ 718,554,839$ | $\$ 771,793,536$ |
| (2) Normal cost from last valuation | $97,313,446$ | $96,352,744$ |
| (3) Actual contributions | $119,904,199$ | $130,000,717$ |
| (4) Interest accrual | $56,580,756$ | $59,265,109$ |

## Health

| Valuation Date | (1) <br> Actuarial <br> Accrued <br> Liabilities <br> (AAL) |  | (2) <br> Valuation <br> Assets |  | $\begin{aligned} & \text { (3) } \\ & \text { Unfunded } \\ & \text { AAL } \end{aligned}$ |  | (4) <br> Funded <br> Ratio <br> (2)/(1) | (5) <br> Financing Period | (6) <br> Payroll |  | Liability Ratio |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | (7) | (8) |  |  |  |  |  |  |
|  |  |  | Unfunded $(3) /(6)$ | Total $(1) /(6)$ |  |  |  |  |  |  |
| 2014 | \$ | 97,015 |  |  | \$ | 102,100 |  | $(5,085)$ | 105.2\% | 22 | \$ | 625,264 | (0.8)\% | 15.5\% |

The Unfunded Liability ratio gives a general measure of the ability to collect contributions to pay off the unfunded liabilities. The Total Liability ratio gives a longer term indication of the volatility of the contribution rate.

2005 results revised pursuant to changes in assumptions and methods enacted by the 2006 Legislature and the CORP Board of Trustees. Results prior to 2009 were calculated by the prior actuary.

## Short Condition Test

If the contributions to CORP are soundly executed, the System will pay all promised benefits when due -- the ultimate test of financial soundness.

A short condition test is one means of checking a system's progress under its funding program. In a short condition test, the plan's present assets (cash and investments) are compared with:

1) Member contributions on deposit;
2) The liabilities for future benefits to present retired lives; and
3) The liabilities for service already rendered by active and inactive members.

In a system that has been following the discipline of pre-funding, the liabilities for member contributions on deposit (liability 1) and the liabilities for future benefits to present retired lives (liability 2 ) will be fully covered by present assets (except in rare circumstances). In addition, the liabilities for service already rendered by active and inactive members (liability 3 ) will be partially covered by the remainder of present assets. The larger the funded portion of liability 3 , the stronger the condition of the system.

## Short Condition Test

| G. Funding Value End of Year |  |  |  |  |  |  |  |  |  |  |  |  |  |
| G1. Preliminary Funding Value End of Year: (A+D+E2+F1:F7) | 1,511,211,514 |  |  |  |  |  |  |  |  |  |  |  |  |
| G2. Upper Corridor: ( $120 \% \times \mathrm{B}$ ) | 1,796,694,001 |  |  |  |  |  |  |  |  |  |  |  |  |
| G3. Lower Corridor: ( $80 \%$ x B) | 1,197,796,001 |  |  |  |  |  |  |  |  |  |  |  |  |
| G4. End of Year: (G1 subject to max of G2 and min of G3) | 1,511,211,514 |  |  |  |  |  |  |  |  |  |  |  |  |
| H. Difference Between Market Value \& Funding Value: (B-G4) | $(13,966,513)$ |  | 23,603,142 |  | 17,712,729 |  | 13,935,651 |  | 20,119,234 |  | 8,714,004 |  | 0 |
| I. Market Rate of Return | 13.2\% |  |  |  |  |  |  |  |  |  |  |  |  |
| J. Recognized Rate of Return | 3.8\% |  |  |  |  |  |  |  |  |  |  |  |  |
| K. Ratio of Funding Value to Market Value | 100.9\% |  |  |  |  |  |  |  |  |  |  |  |  |

The funding value of assets recognizes assumed investment return (line E2) fully each year. Differences between actual and assumed investment return (line E3) are phased-in over a closed 7 -year period. During periods when investment performance exceeds the assumed rate, funding value of assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, funding value of assets will tend to be greater than market value. The funding value of assets is unbiased with respect to market value. At any time it may be either greater or less than market value. If actual and assumed rates of investment return are exactly equal for 7 consecutive years, the funding value will become equal to market value.

## Development of Health Funding Value of Assets (7-Year Smoothing)

Results prior to 2009 were calculated by the prior actuary.

## SECTION E <br> METHODS AND ASSUMPTIONS

## Valuation Methods

Actuarial Cost Method - Normal cost and the allocation of benefit values between service rendered before and after the valuation date were determined using an individual entry-age actuarial cost method having the following characteristics:
(i) the annual normal costs for each individual active member, payable from the date of hire to the date of retirement, are sufficient to accumulate to the value of the member's benefits.
(ii) each annual normal cost is a constant percentage of the member's year-by-year projected covered pay.

The entry-age actuarial cost method allocates the actuarial present value of each member's projected benefits on a level basis over the member's compensation between the entry age of the member and the assumed exit ages.

Actuarial Accrued Liability - The actuarial accrued liability is the portion of actuarial present value allocated to service rendered prior to the valuation date, including experience gains and losses. The actuarial accrued liability was computed using the assumptions summarized in this report.

Actuarial Value of System Assets - The actuarial value of assets recognizes assumed investment income fully each year. Differences between actual and assumed investment income are phased-in over a closed 7 -year period subject to a $20 \%$ corridor. During periods when investment performance exceeds the assumed rate, actuarial value of assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, the actuarial value of assets will tend to be greater than market value.

Financing of Unfunded Actuarial Accrued Liabilities - The actuarial value of assets were subtracted from the computed actuarial accrued liability. Any unfunded amount would be amortized as level percent-of-payroll over a closed period of 22 years. If the actuarial value of assets exceeded the actuarial accrued liability, the excess was amortized over an open period of 20 years and applied as a credit to reduce the normal cost which otherwise would be payable.

Active member payroll was assumed to increase $4.00 \%$ annually for the purpose of computing the amortization payment (credit) as a level percent-of-payroll.

## VALUATION ASSUMPTIONS

Beginning with the June 30, 2007 valuation and with each subsequent valuation, if the actuarial value of assets exceeds the actuarial accrued liabilities, one half of this excess in each year is allocated to a Stabilization Reserve. The Stabilization Reserve is excluded from the calculation of the employer contribution rates. The Stabilization Reserve continues to accumulate as long as the plan is over-funded. Once the plan becomes under-funded, the Stabilization Reserve will be used to dampen increases in the employer contribution rates.

The rate of investment return was $7.85 \%$ a year, compounded annually net of investment and administrative expenses.

The assumed real return is the rate of return in excess of wage growth. Considering other assumptions used in the valuation, the $7.85 \%$ nominal rate translates to a net real return over wage growth of $3.85 \%$ a year.

The rates of pay increase used for individual members are shown below. This assumption is used to project a member's current pay to the pay upon which System benefits will be based.

| Sample <br> Ages | Salary Increase Assumptions <br> For an Individual Member |  |  |
| :---: | :---: | :---: | :---: |
|  |  <br> Seniority | Base <br> (Economy) | Increase <br> Next Year |
|  |  |  |  |
| 20 | $3.3 \%$ | $4.0 \%$ | $7.3 \%$ |
| 25 | $3.0 \%$ | $4.0 \%$ | $7.0 \%$ |
| 30 | $2.2 \%$ | $4.0 \%$ | $6.2 \%$ |
| 35 | $1.3 \%$ | $4.0 \%$ | $5.3 \%$ |
| 40 | $0.7 \%$ | $4.0 \%$ | $4.7 \%$ |
| 45 | $0.5 \%$ | $4.0 \%$ | $4.5 \%$ |
| 50 | $0.4 \%$ | $4.0 \%$ | $4.4 \%$ |
| 55 | $0.2 \%$ | $4.0 \%$ | $4.2 \%$ |
| 60 | $0.0 \%$ | $4.0 \%$ | $4.0 \%$ |
| Ref: | 382 |  |  |

Active member payroll is assumed to grow at $4.00 \%$ per year. Although no specific price inflation assumption is required to perform this valuation, since no benefits are linked to prices, a price inflation assumption on the order of $3.0 \%$ to $4.0 \%$ would be consistent with the other economic assumptions.

## VALUATION ASSUMPTIONS

The healthy mortality table used to evaluate death after retirement in this valuation of the System was the RP 2000 Mortality table (adjusted by $105 \%$ for both males and females). This assumption was first used for the June 30, 2012 valuation of the System. Sample rates of mortality and years of life expectancy are shown below:

| Sample <br> Attained <br> Ages | Probability of <br> Dying Next Year |  | Future Life <br> Expectancy (years) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Men | Women | Men | Women |
|  |  |  |  |  |
| 50 | $0.22 \%$ | $0.18 \%$ | 30.37 | 33.14 |
| 55 | 0.38 | 0.29 | 25.76 | 28.47 |
| 60 | 0.71 | 0.53 | 21.35 | 23.95 |
| 65 | 1.34 | 1.02 | 17.24 | 19.72 |
| 70 | 2.33 | 1.76 | 13.54 | 15.86 |
| 75 | 3.97 | 2.95 | 10.27 | 12.40 |
| 80 | 6.76 | 4.82 | 7.50 | 9.38 |
| Ref: | $506 \quad \mathrm{x} \quad 1.05$ | $507 \quad \mathrm{x} \quad 1.05$ |  |  |

This assumption is used to measure the probabilities of each benefit payment being made after retirement. For disabled members, non-disability rates with a 5 -year set forward were used.

The disabled mortality table used to evaluate death after retirement in this valuation of the System was the RP 2000 Mortality table (set forward 10 years for both males and females). This assumption was first used for the June 30, 2012 valuation of the System. Sample rates of mortality and years of life expectancy are shown below:

| Sample <br> Attained <br> Ages | Probability of <br> Dying Next Year |  | Future Life <br> Expectancy (years) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Men | Women | Men | Women |
|  |  |  |  |  |
| 50 | $0.67 \%$ | $0.51 \%$ | 21.74 | 24.38 |
| 55 | 1.27 | 0.97 | 17.61 | 20.12 |
| 60 | 2.22 | 1.67 | 13.88 | 16.23 |
| 65 | 3.78 | 2.81 | 10.57 | 12.74 |
| 70 | 6.44 | 4.59 | 7.75 | 9.68 |
| 75 | 11.08 | 7.74 | 5.49 | 7.09 |
| 80 | 18.34 | 13.17 | 3.86 | 5.15 |
| Ref: | $506 \quad \mathrm{x} 1.00$ | $507 \quad \mathrm{x} 1.00$ |  |  |

## VALUATION ASSUMPTIONS

For actives, the sample rates of mortality for death-in-service are shown below, and were first used for the June 30, 2012 valuation of the System.

| Sample <br> Attained <br> Ages | Probability of Dying Next Year |  |
| :---: | :---: | :---: |
|  | Men | Women |
| 50 | 0.17\% | 0.13\% |
| 55 | 0.29 | 0.22 |
| 60 | 0.54 | 0.40 |
| 65 | 1.02 | 0.78 |
| Ref: | $\begin{array}{lll}506 & \text { x } & 0.80\end{array}$ | 507 $\quad$ x 0.80 |
|  | 0 year set forward | 0 year set forward |

The rates of regular retirement used to measure the probability of eligible members retiring during the next year are shown below. These assumptions was first used for the June 30, 2012 valuation of the System.

Retirement Rates: Age-related rates for members hired before January 1, 2012 are shown below:

| Age at <br> Retirement | Rates |
| :---: | :---: |
|  |  |
| 60 | $60 \%$ |
| 61 | $60 \%$ |
| 62 | $60 \%$ |
| 63 | $60 \%$ |
| 64 | $60 \%$ |
| 65 | $60 \%$ |
| 66 | $60 \%$ |
| 67 | $60 \%$ |
| 68 | $60 \%$ |
| 69 | $60 \%$ |
| 70 | $60 \%$ |
| 71 | $60 \%$ |
| 72 | $60 \%$ |
| 73 | $60 \%$ |
| 74 | $60 \%$ |
| 75 | $100 \%$ |
| Ref. | 2153 |

These retirement rates are applicable to employees attaining age 62 before attaining 20 ( 25 for dispatchers) years of service.

## VALUATION ASSUMPTIONS

Service-related rates for members hired before January 1, 2012 are shown below:

| Service at <br> Retirement | Rates |
| :---: | :---: |
|  |  |
| 20 | $28 \%$ |
| 21 | $28 \%$ |
| 22 | $22 \%$ |
| 23 | $20 \%$ |
| 24 | $17 \%$ |
| 25 | $33 \%$ |
| 26 | $33 \%$ |
| 27 | $25 \%$ |
| 28 | $17 \%$ |
| 29 | $17 \%$ |
| 30 | $30 \%$ |
| 31 | $30 \%$ |
| 32 | $50 \%$ |
| 33 | $50 \%$ |
| 34 | $75 \%$ |
| 35 | $75 \%$ |
| 36 | $75 \%$ |
| 37 | $100 \%$ |
| Ref. | 2154 |

These retirement rates are applicable to employees attaining 20 ( 25 for dispatchers) years of service before attaining age 62 .

Age-related rates for members hired after January 1, 2012 are shown below:

| Age at <br> Retirement | Rates |
| :---: | :---: |
|  |  |
| 53 | $40 \%$ |
| 54 | $40 \%$ |
| 55 | $30 \%$ |
| 56 | $15 \%$ |
| 57 | $15 \%$ |
| 58 | $30 \%$ |
| 59 | $30 \%$ |
| 60 | $65 \%$ |
| 61 | $65 \%$ |
| 62 | $100 \%$ |
| Ref. | 1744 |

## VALUATION ASSUMPTIONS

Rates of separation from active membership used in the valuation are shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members remaining in employment. This assumption was first used for the June 30, 2012 valuation of the System.

| Sample <br> Ages | Years of Service | \% of Active Members Separating Within Next Year |
| :---: | :---: | :---: |
| All | 0 | 25.00\% |
|  | 1 | 20.00\% |
|  | 2 | 16.00\% |
|  | 3 | 14.00\% |
|  | 4 | 12.00\% |
|  | 5 | 9.00\% |
|  | 6 | 9.00\% |
|  | 7 | 9.00\% |
|  | 8 | 8.00\% |
|  | 9 | 8.00\% |
|  | 10 | 8.00\% |
|  | 11 | 5.00\% |
|  | 12 | 4.00\% |
|  | 13 | 4.00\% |
|  | 14 | 3.00\% |
|  | 15 | 3.00\% |
|  | 16 | 3.00\% |
|  | 17 | 2.00\% |
|  | 18 | 2.00\% |
|  | 19 | 2.00\% |
| Ref. |  | 729 |

## VALUATION ASSUMPTIONS

Rates of disability among active members used in the valuation are shown below, and were first used for the June 30, 2012 valuation of the System.

| Sample <br> Ages | \% of Active Members Becoming <br> Disabled within Next Year |
| :---: | :---: |
|  |  |
| 20 | $0.03 \%$ |
| 25 | $0.03 \%$ |
| 30 | $0.03 \%$ |
| 35 | $0.04 \%$ |
|  |  |
| 40 | $0.05 \%$ |
| 45 | $0.06 \%$ |
| 50 | $0.08 \%$ |
| 55 | $0.08 \%$ |
| Ref | 592 |

# SUMMARY OF ASSUMPTIONS USED JUNE 30, 2014 <br> Miscellaneous and Technical Assumptions 

| Marriage Assumption: | $80 \%$ of males and females are assumed to be married for <br> purposes of death-in-service benefits. Male spouses are assumed <br> to be three years older than female spouses for active member <br> valuation purposes. |
| :--- | :--- |
| Pay Increase Timing: | Six months after the valuation date. This means that the pays <br> received are assumed to be annual rates of pay on the valuation <br> date as opposed to W-2 type earnings for the prior 12 months. |
| Decrement Timing: | Decrements of all types are assumed to occur mid-year. |
| Eligibility Testing: | Eligibility for benefits is determined based upon the age nearest <br> birthday and service nearest whole year on the date the <br> decrement is assumed to occur. |
| Decrement Relativity: | Decrement rates are used directly from the experience study, <br> without adjustment for multiple decrement table effects. |
| Decrement Operation: | Disability and turnover decrements do not operate during <br> retirement eligibility. |
| Service Credit Accruals: | It is assumed that members accrue one year of service credit per <br> year. |
| Incidence of Contributions: | Contributions are assumed to be received continuously <br> throughout the year based upon the computed percent of payroll |
| shown in this report, and the actual payroll payable at the time |  |

## SECTION F <br> PLAN PROVISIONS

Summary of Plan Provisions<br>Valued and/OR CONSIDERED

Membership: Designated positions for the following employers that elect to join the Plan are eligible to participate in the CORP if the employee's customary employment is for at least forty (40) hours per week, or as defined by statute. A.R.S. § 38-881(13):

- For a County: A county detention officer and non-uniformed employees of a sheriff's department whose primary duties require direct inmate contact.
- For the State Department of Corrections and the Department of Juvenile Correction: Specific positions are eligible to participate. Refer to the statute for specific positions.
- For a City or Town, a City or Town Detention Officer.
- For an employer of an eligible group as defined in A.R.S. § 38-842, full-time dispatchers.
- For the judiciary, probation, surveillance, and juvenile detention officers and those positions designated by the Local Board.
- For the Department of Public Safety, state detention officers.

Dispatchers hired after November 24, 2009 must participate in the Arizona State Retirement System. A.R.S. § 38-902(C).

## Average Monthly Compensation:

## For members hired before January 1, 2012:

One-thirty-sixth of total compensation paid to member during the three years, out of the last 10 years of credited service, in which the amount paid was highest. Compensation is the amount including base salary, overtime pay, shift differential pay and holiday pay, paid to an employee on a regular payroll basis and longevity pay paid at least every six months for which contributions are made to the System.

## For members hired after January 1, 2012:

One-sixtieth of total compensation paid to member during the five years, out of the last 10 years of credited service, in which the amount paid was highest. Compensation is the amount including base salary, overtime pay, shift differential pay and holiday pay, paid to an employee on a regular payroll basis and longevity pay paid at least every six months for which contributions are made to the System.

## Normal Retirement (no reduction for age)

For members hired before January 1, 2012:
A corrections officer may retire upon meeting one of the following age and service requirements:
a) Any age with 20 ( 25 for dispatchers) or more years of credited service (effective August 9, 2001);
b) Age 62 years with 10 or more years of credited service; or
c) A combination of age and credited service equal to 80 (effective July 1, 1995).

The amount of normal pension at 20 years of credited service is $50 \%$ of average monthly salary with $2 \%$ increments for every year over 20 years of credited service up to 25 years of credited service. With 25 or more years of credited service the accrual rate is $2.5 \%$ for each year.

## Summary of Plan Provisions <br> Valued and/OR CONSIDERED

The maximum amount payable as a normal retirement pension is $80 \%$ of the average monthly compensation.

## For members hired after January 1, 2012:

First day of month following the attainment of age 52.5 and completion of 25 years of service or the attainment of age 62 and completion of 10 years of service.

The amount of monthly normal pension is based on credited service and average monthly compensation as follows:

- Age 62 and 10 years of service, $2.5 \%$ of average monthly compensation per year of credited service.
- Age 52.5 with 25 or more years of credited service, $62.5 \%$ of average monthly compensation, plus $2.5 \%$ of average monthly compensation for each year of credited service over 25 .
- Age 52.5 with 25 years of service, but less than 25 years of credited service, $2.5 \%$ of average monthly compensation multiplied total credited service.

The maximum amount payable as a normal retirement pension is $80 \%$ of the average monthly compensation.

Early Retirement (reduction for age). No provision.
Vested Termination (deferred retirement): Termination of covered position employment with 10 or more years of credited service. Pension is calculated based on twice the member's accumulated contributions with payments commencing at age 62 . Benefit is forfeited if accumulated contributions are refunded. The following schedule shows additional money which would be payable to members who receive a refund of their accumulated member contributions.

| Years of Credited Service |  | Additional Monies <br> (\% of Contributions) $)$ |
| :---: | :---: | :---: |
|  | $0-4$ | $0 \%$ |
| $5-6$ | $25-40$ |  |
| $7-8$ | $55-70$ |  |
| $9-10$ | $85-100$ |  |

For members hired on or after January 1, 2012 that cease to hold office for any reason other than death or retirement, member can withdraw their accumulated contributions less any benefit payments already received or any amount the member owes the Plan (no employer match of refund contributions) with interest at rate set by Board.

Disability Retirement. A member who is injured in the performance of his duties which totally and permanently prevent him from performing a reasonable range of duties in his department and was the

Summary of Plan Provisions<br>Valued and/OR CONSIDERED

result of either physical contact with an inmate, responding to a confrontational situation with an inmate or a job-related motor vehicle accident may be retired under accidental disability. A corrections officer who becomes incapacitated for any gainful employment, as the direct and proximate result of performance of duty as a corrections officer, may be retired by the Board of Trustees under total and permanent disability. The amount of pension for both types of disability is 50 percent of average monthly salary.

A member who has a total and permanent disability that prevents the performance of a reasonable range of duties in his department may be retired by the Board of Trustees under an ordinary disability (non-duty related). The amount of the pension is a percentage of normal retirement benefit. The percentage based on credited service divided by 20 ( 25 for dispatchers).

DROP: Beginning July 1, 2006 and through June 30, 2016, the CORP shall offer the Reverse Deferred Retirement Option Plan (Reverse DROP) to members that are eligible for a normal pension (based on service and age) applicable to a membership date that is either prior to, or after January 1, 2012 (who is not awarded an accidental, ordinary or total and permanent disability pension). Under the Reverse DROP, the member must voluntarily and irrevocably elect to terminate employment and receive a normal retirement upon participation in the Reverse DROP. The Reverse DROP date is the first day of the month immediately following completion of required credited service, or a date not more than sixty (60) consecutive months before the date the member elects to participate in the Reverse DROP, whichever is later.

The member's pension will be calculated using the factors of credited service and average monthly benefit compensation in effect on the Reverse DROP Date. The lump sum distribution is credited as though it accrued monthly from the Reverse DROP date to the date the member elected to participate in the Reverse DROP (plus interest equal to the yield on a five (5) year Treasury note as of the first day of the month as published by the Federal Reserve Board).

Survivor Pensions. Payable to the eligible beneficiary of a retired corrections officer or an active corrections officer. An eligible beneficiary is a surviving spouse who was married to the retired or active corrections officer for at least two years. A surviving spouse's pension terminates upon death. The amount of a surviving spouse's pension is $80 \%$ of the pension being paid the deceased retired corrections officer and $40 \%$ ( $100 \%$ if duty-related) of the average monthly salary of the deceased active corrections officer. Eligible surviving children are paid equal shares of the pension which would have been payable to a surviving spouse if a surviving spouse pension is not being paid. If no pension is payable because of the death of an active member, a refund of twice the member's accumulated contributions is paid to the beneficiary.

Other Terminations. The member is paid a refund of accumulated member contributions, plus an additional amount if the member has at least five years of service credited. The additional amount is a percent, based on service credit, of the member contribution amount, ranging from $25 \%$ (with five years of service credited) to $100 \%$ (with 10 or more years of service credited).

# Summary of Plan Provisions <br> Valued and/OR CONSIDERED 

## Post-Retirement Adjustments:

## For members retired on or before July 1, 2011:

Contingent upon the excess investment earnings, effective July 1 of each year, eligible retired members or survivors may be entitled to a permanent benefit increase in their base benefit. To be eligible for the increase, the retired member or survivor must be either age 55 or older on July 1 of the current year and receiving benefits on or before July 31 of the previous year, or the retired member or survivor has been receiving benefits on or before July 31 of the previous two years. The maximum amount of the increase is $4 \%$ of the average normal benefit being received on the preceding June 30.

Prior to July 1, 2013 a PBI reserve is maintained and used to pay for the post-retirement adjustment. The investment return on the PBI reserve is the same as the return on the market value of assets (whether the return is positive or negative). Additional amounts are added to the PBI reserve in years when the investment return on the market value of assets exceeds $9.0 \%$. Each year the present value of that year's post-retirement adjustment is subtracted from the PBI reserve. A post-retirement adjustment is paid as long as there is a positive balance in the PBI reserve.

## For members retired on or after August 1, 2011:

A PBI is only paid in a year when the annual return on the market value of assets of the prior fiscal year exceeds $10.5 \%$ and the plan is at least $60 \%$ funded. $100 \%$ of the excess earnings is used to determine whether a PBI can be paid and the size of the PBI for that year. No PBI reserve will accumulate and the present value of that year's PBI for eligible retirees cannot exceed $100 \%$ of the earnings in excess of $10.5 \%$. If the excess earnings is high enough to exceed the present value of that year's PBI, the excess stays in the fund.

To be eligible for an increase the retiree or the survivor must be:

- In the case of a retired member who became a member of the plan before January 1, 2012, the retired member or survivor was receiving benefits on or before July 31 of the two previous years; or
- In the case of a retired member who became a member of the plan before January 1, 2012, the retired member or survivor was 55 or older on July 1 of the current year and was receiving benefits on or before July 31 of the previous year.
- In the case of a retired member who became a member of the plan on or after January 1, 2012, the retired member or survivor was at least 55 or older on July 1 and receiving benefits.
- In the case of a retired member who became a member of the plan on or after January 1, 2012, if under 55 on July 1, was receiving accidental disability benefits for the preceding 2 years.
- In the case of a member who became a member of the plan on or after January 1, 2012, if the survivor is under 55 on July 1, is the survivor of the member who was killed in the line of duty, and has been receiving a survivor benefits for the preceding 2 years.

The amount of the PBI to be paid is determined as follows:

- Funded ratio is $60-64 \%, \mathrm{PBI}$ is $2 \%$
- Funded ratio is $65-69 \%, \mathrm{PBI}$ is $2.5 \%$

# Summary of Plan Provisions <br> Valued and/OR CONSIDERED 

- Funded ratio is $70-74 \%, \mathrm{PBI}$ is $3 \%$
- Funded ratio is $75-79 \%, \mathrm{PBI}$ is $3.5 \%$
- Funded ratio is $80 \%$ or more, PBI is $4 \%$

Post-Retirement Health Insurance Subsidy: Payable on behalf of retired members and survivors who elect coverage provided by the state or participating employer. The monthly amounts cannot exceed:

| Member Only |  |  | With Dependents |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Not Medicare <br> Eligible | Medicare <br> Eligible |  | All Not <br> Medicar <br> Eligible | All <br> Medicare <br> Eligible | One With <br> Medicare |
| $\$ 150$ | $\$ 100$ |  | $\$ 260$ | $\$ 170$ | $\$ 215$ |

Member Contributions. $8.50 \%$ of base salary. For fiscal years 2007/2008 and 2008/2009, the member contribution rate is $7.96 \%$ pursuant to legislation adopted in 2005. Effective after $9 / 26 / 2008$, non-dispatcher members contribute $8.41 \%$, or a $50 / 50$ split between employer and employee, whichever is lower, until the Plan is $100 \%$ funded. Minimum employee contribution rate of $7.65 \%$, minimum employer contribution rate of $6 \%$. Dispatcher contribution rate is $.45 \%$ less than the nondispatcher rate until the plan is $100 \%$ funded then rates are equal thereafter.

Employer Contributions. Percent of payroll normal cost plus 30-year (22 years remaining as of June $30,2014)$ amortization of unfunded actuarial accrued liability ( 20 -year amortization for credit). The minimum employer contribution rate is $6 \%$ for fiscal years beginning with FY 2007/2008 (5\% for units under 5\% as of June 30, 2005 valuation).

## SECTION G

FUNDING POLICY

## Actuarial Funding Policy

## Introduction

The purpose of this Actuarial Funding Policy is to record the funding objectives and policy set by the Board for the Arizona Public Safety Personnel Retirement System (PSPRS). The Board establishes this Funding Policy to help ensure the systematic funding of future benefit payments for members of the Retirement System.

In 2012, the Governmental Accounting Standards Board (GASB) approved two new financial reporting standards. GASB Statement No. 67, "Financial Reporting for Pension Plans" replaces the requirements of Statement No. 25. GASB Statement No. 68, "Accounting and Financial Reporting for Pensions" replaces the requirements of Statements No. 27 and No. 50. Prior to the changes, the Annual Required Contribution (ARC) rate was used as a basis for funding decisions. The new GASB statements separate accounting cost (expense) from funding cost (contributions), necessitating the creation of this funding policy.

This funding policy shall be reviewed by the Board annually for several years following initial adoption until the next experience study. Subsequently, it shall be reviewed every five years in conjunction with the experience study.

## Funding Objectives

1. Maintain adequate assets so that current plan assets plus future contributions and investment earnings are sufficient to fund all benefits expected to be paid to members and their beneficiaries.
2. Maintain stability of employer contribution rates, consistent with other funding objectives.
3. Maintain public policy goals of accountability and transparency. Each policy element is clear in intent and effect, and each should allow an assessment of whether, how and when the funding requirements of the plan will be met.
4. Promote intergenerational equity. Each generation of members and employers should incur the cost of benefits for the employees who provide services to them, rather than deferring those costs to future members and employers.
5. Provide a reasonable margin for adverse experience to help offset risks.
6. Continue progress of systematic reduction of the Unfunded Actuarial Accrued Liabilities (UAAL).

## Actuarial Funding Policy

## Elements of Actuarial Funding Policy

## 1. Actuarial Cost Method

a. The Individual Entry Age Normal level percent-of-pay actuarial cost method of valuation shall be used in determining Actuarial Accrued Liability (AAL) and Normal Cost. Differences in the past between assumed experience and actual experience ("actuarial gains and losses") shall become part of the AAL. The Normal Cost shall be determined on an individual basis for each active member.

## 2. Asset Smoothing Method

a. The investment gains or losses of each valuation period, resulting from the difference between actual investment return and assumed investment return, shall be recognized annually in level amounts over 7 years in calculating the Funding Value of Assets
b. The Funding Value of Assets so determined shall be subject to a $20 \%$ corridor relative to Market Value of Assets.

## 3. Amortization Method

a. The Funding Value of Assets are subtracted from the computed AAL. Any unfunded amount is amortized as a level percent-of-payroll over a closed period. If the Funding Value of Assets exceeds the AAL, the excess is amortized over an open period of 20 years and applied as a credit to reduce the Normal Cost otherwise payable.

## 4. Funding Target

a. The targeted funded ratio shall be $100 \%$.
b. The maximum amortization period shall be 30 years.
c. If the funded ratio is between $100 \%$ and $120 \%$, a minimum contribution equal to the Normal Cost will be made.

## Actuarial Funding Policy

## Elements of Actuarial Funding Policy

## 5. Risk Management

a. Assumption Changes

- The actuarial assumptions used shall be those last adopted by the PSPRS Board based on the most recent experience study and upon the advice and recommendation of the actuary. In accordance with best practices, the actuary shall conduct an experience study every five years. The results of the study shall be the basis for the actuarial assumption changes recommended to the PSPRS Board.
- The actuarial assumptions can be updated during the 5-year period if significant plan design changes or other significant events occur, as advised by the actuary.
b. Amortization Method
- The amortization method, Level Percent Closed, will ensure full payment of the UAAL over a finite, systematically decreasing period not to exceed 30 years. The amortization period will be reviewed once the period reaches 15 years.
c. Risk Measures
- The following risk measures will be annually determined to provide quantifiable measurements of risk and their movement over time.
(i) Classic measures currently determined
- Funded ratio (assets/liability)
(ii) UAAL/Total Payroll
- Measures the risk associated with contribution decreases relative impact on the ability to fund the UAAL. An increase in this measure indicates a increase in contribution risk.
(iii)Total Liability/Total Payroll
- Measures the risk associated with the ability to respond to liability experience through adjustments in contributions. An increase in this measure indicates an increase in experience risk.

## Actuarial Funding Policy

## Glossary

1. Actuarial Accrued Liability (AAL): The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as "accrued liability" or "past service liability."
2. Actuarial Assumptions: Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.
3. Actuarial Cost Method: A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future plan benefits" between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the "actuarial funding method."
4. Actuarial Gain (Loss): A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used. For example, if during a given year the assets earn more than the investment return assumption, the amount of earnings above the assumption will cause an unexpected reduction in UAAL, or "actuarial gain" as of the next valuation. These include contribution gains and losses that result from actual contributions made being greater or less than the level determined under the policy.
5. Actuary: A person who is trained in the applications of probability and compound interest to problems in business and finance that involve payment of money in the future, contingent upon the occurrence of future events. Most actuaries in the United States are Members of the American Academy of Actuaries (MAAA). The Society of Actuaries (SOA) is an international research, education and membership organization for actuaries in the life and health insurance, employee benefits, and pension fields. The SOA administers a series of examinations leading initially to Associateship and the designation ASA and ultimately to Fellowship with the designation FSA.
6. Amortization: Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.
7. Entry Age Normal Actuarial Cost Method: A funding method that calculates the Normal Cost as a level percentage-of-pay over the working lifetime of the plan's members.
8. Experience Study: An actuarial investigation of demographic and economic experiences of the system during the period studied. The investigation is made for the purpose of updating the actuarial assumptions used in valuing the actuarial liabilities.

## Actuarial Funding Policy

9. Funding Value of Assets: The value of current plan assets recognized for valuation purposes. Generally based on a phased-in recognition of all or a portion of market related investment return. Sometimes referred to as Actuarial Value of Assets.
10. Market Value of Assets: The fair value of plan assets as reported in the plan's audited financial statements.
11. Normal Cost (NC): The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as "current service cost." Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.
12. Unfunded Actuarial Accrued Liability (UAAL): The positive difference, if any, between the actuarial accrued liability and valuation assets. Sometimes referred to as "unfunded accrued liability."

## SECTION H

GLOSSARY

Actuarial Accrued Liability

Accrued Service<br>Actuarial Assumptions

Actuarial Cost Method

Actuarial Equivalent

Actuarial Present Value

Amortization

Experience Gain/(Loss)

Normal Cost

The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as "accrued liability" or "past service liability."

The service credited under the plan which was rendered before the date of the actuarial valuation.

Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future plan benefits" between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the "actuarial funding method."

A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as "current service cost." Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

## Reserve Account

## Unfunded Actuarial Accrued Liability

Valuation Assets

An account used to indicate that funds have been set aside for a specific purpose and is not generally available for other uses.

The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as "unfunded accrued liability."

The value of current plan assets recognized for valuation purposes. Generally based on market value plus a portion of unrealized appreciation or depreciation.

## APPENDIX I <br> ACCOUNTING DISCLOSURES

This information is presented in draft form for review by the System's auditor. Please let us know if there are any items that the auditor changes so that we may maintain consistency with the System's financial statements. Please note Plan reporting under GASB Statement No. 25 has been replaced by GASB Statement No. 67.

# Information Required by GASB Statement No. 67 

The Governmental Accounting Standards Board Statement No. 67 (GASB 67) contains certain requirements regarding the accounting and disclosure of financial information. In addition to disclosing the system's fiduciary net position, retirement systems are also required to disclose information regarding the plan's total pension liability, net pension liability, and change in net pension liability from the prior year. In actuarial terms, these are the plan's actuarial accrued liability and unfunded actuarial accrued liability on a market value of asset basis. This section of the report contains information that is part of the Retirement System's disclosure requirements under this accounting standard.

## Determination of the Total Pension Liability

The total pension liability shown in this subsection is also shown as of the last date of the pension plan's fiscal year, June 30, 2014.

A single discount rate of $7.85 \%$ was used to measure the total pension liability. This single discount rate was based on the expected rate of return on pension plan investments of $7.85 \%$. The projection of cash flows used to determine this single discount rate assumed that plan member contributions will be made at the current contribution rate and that employer contributions will be made at rates equal to the difference between actuarially determined contribution rates and the member rate. Based on these assumptions, the pension plan's fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the long-term expected rate of return on pension plan investments was applied to all periods of projected benefit payments to determine the total pension liability.

An exhibit providing the projections and calculations used to determine the single equivalent discount rate under GASB Statement No. 67 can be provided upon request.

## Measurement of Net Pension Liability

The net pension liability is to be measured as the total pension liability, less the amount of the pension plan's fiduciary net position. As of the plan year ending June 30, 2014, the net pension liability is $\$ 1,140,300,163$. If a single discount rate that was 100 basis points lower was used, the net pension liability would have been $\$ 1,488,068,005$. Similarly, if a single discount rate that was 100 basis points higher was used, the net pension liability would have been $\$ 852,333,128$.

The following exhibit provides information regarding the total pension liability, net pension liability, and change in the net pension liability since the prior plan year (and related ratios).

## GASB STATEMENT NO. 67 SUPPLEMENTARY INFORMATION

## Summary of Actuarial Methods and Assumptions Used to DETERMINE CONTRIBUTION RATES

The information presented in the required supplementary schedules was determined as part of the actuarial valuations at the dates indicated. Additional information as of the latest actuarial valuation follows:

| Valuation date | June 30, 2014 |
| :--- | :--- |
| Actuarial cost method | Entry-Age Normal |
| Amortization method | Level percent-of-pay, Closed |
| Remaining amortization period | 22 years |
| Asset valuation method | 7 -year smoothed market <br> $80 \% / 120 \%$ market corridor |
| Inflation | $4.00 \%$; no explicit price inflation assumption is used in this <br> valuation. |

Actuarial assumptions:

| Investment rate of return | $7.85 \%$ |
| :--- | :--- |
| Projected salary increases | $4.00 \%-7.25 \%$ |
| Payroll growth | $4.00 \%$ |

Mortality

Assumed Future Permanent Benefit Increases

Retirement Age Experience-based table of rates that is specific to the type of eligibility condition.

RP-2000 mortality table (adjusted by 105\% for both males and females). valuation.
4.00\%

Members retired on or before July 1, 2011: 2.25\% of benefit. Members retired on or after August 1, 2011: $0.5 \%$ of benefit.

## GASB STATEMENT NO. 45 SUPPLEMENTARY INFORMATION

The following information is presented concerning the post-retirement health insurance subsidy. The liabilities and computed contribution for the post-retirement health insurance subsidy were based on the same assumptions and actuarial cost methods as indicated for GASB Statement No. 25.

## Schedule of Funding Progress
