

Tucson Supplemental Retirement System

ACTUARIAL VALUATION REPORT AS OF
June 30, 2023

September 21, 2023

The Board of Trustees
Tucson Supplemental Retirement System
Tucson, Arizona

Re: Actuarial Valuation of the Tucson Supplemental Retirement System as of June 30, 2023

Dear Board Members:

We are pleased to present the report on the actuarial valuation of the Tucson Supplemental Retirement System as of June 30, 2023.

This report presents the results of the June 30, 2023 actuarial valuation of the Tucson Supplemental Retirement System. The report describes the current actuarial condition of the Tucson Supplemental Retirement System, determines recommended annual employer and employee contribution rates, and analyzes changes in these required rates. This report should not be relied on for any purpose other than the purpose described in the primary communication. Information needed to comply with Statements No. 67 and 68 is provided in a separate accounting report.

We certify that the information included herein and contained in the June 30, 2023 Actuarial Valuation Report is accurate and fairly presents the actuarial position of the Tucson Supplemental Retirement System as of the valuation date.

Contribution Rates

There are no recommended changes to the contribution rates for FY 2023 for the employer rate or the employee rate for those hired prior to July 1, 2006. Based on the TSRS funding policy, the recommended employer rate will remain at 27.5%, and the recommended employee rates will remain at 5.00% for the members hired prior to July 1, 2006.

Currently, members hired prior to July 1, 2006 contribute a flat rate, while members hired after June 30, 2006 are subject to variable rates that are 50% of their tiers' normal cost, subject to a floor of 5.0%. These rates are further subject to a 5.00% floor and a roundup policy rounding to the next 0.25% percent. The Tier I and II variable rates based on this policy were 7.00% and 5.50%, respectively, as of the June 30, 2019 through June 30, 2021 valuations and 7.25% and 5.75%, respectively, as of the June 30, 2022 through June 30, 2023 valuations. However, the City has decided to override increases in employee contributions determined by the Board funding policy in favor of maintaining level employee contributions at the rates of 6.75% and 5.25%, respectively, through fiscal year 2024. Based on the Board funding policy, we recommend an increase to the employee rates from 6.75% to 7.25% for the Tier I variable class and from 5.25% to 5.75% for the tier II variable class for fiscal year 2025. Full details of these calculations are in the report.

Financing Objectives

The employer contributions, when combined with the contributions made by members, are intended to cover the Actuarially Determined Contribution (ADC), which is the sum of the Normal Cost plus a percent-of-pay amortization payment of the Unfunded Actuarial Accrued Liability (UAAL). Effective June 30, 2022, the board adopted a change to the amortization period used for the amortization of future actuarial gains and losses. The initial amortization base was established based on the UAAL as of July 1, 2022 and will be amortized as a level percent of pay over a closed 20-year period. The remaining base will be amortized over 19 years as of July 1, 2023, 18 years as of July 1, 2024, etc. A new base will be established each year for any additional gains or losses and each new base will be amortized as a level percent of pay over a closed 20-year period. If the contributions made are equal to the ADC, and if all actuarial assumptions are met, there will not be an unfunded accrued liability at the end of the 20-year period. Accordingly, the Actuarially Determined Contribution under the Board funding policy can be considered a “Reasonable Actuarially Determined Contribution” as required by the Actuarial Standards of Practice.

The Board has also adopted a funding policy which rounds up the employee and City contribution rates, and in addition, sets a 27.50% minimum on the City contribution rate until full funding is reached. Based on this funding policy, the System is projected to reach full funding in 2034 based on a projection of the Actuarial Value of Assets. The System is projected to reach full funding in 2036 based on a projection of the Market Value of Assets.

Progress Toward Realization of Financing Objectives

The UAAL/(surplus) and the funded ratio (ratio of the actuarial value of assets to the actuarial accrued liability) illustrate the progress toward the realization of certain financing objectives. Based on the actuarial valuation as of June 30, 2023, the Plan has an unfunded liability of \$315.4 million and a funded ratio of 75.0%.

The decrease in the funded ratio from 76.50% to 75.0% was due to the recognition of net asset losses on the Actuarial Value of Assets as well as liability losses related to salary increases greater than expected. A funded ratio less than 100% indicates an actuarially determined contribution that will require a normal cost and an amortization payment. If the contributions equal the ADC, and if all assumptions are met, the funded ratio should improve over time.

The Total Actuarially Determined Contribution as a percentage of pay based on the actuarial valuation as of June 30, 2023 is 25.96% compared to the total contribution rate in the prior year of 26.45%. This total rate, net of employee contributions, is used in setting City rates for the fiscal year beginning July 1, 2024 (FY 2025).

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in Section G of this report. This report does not include an assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment. We encourage a review and assessment of investment and other significant risks that may have a material effect on the System’s financial condition.

Benefit Provisions

All of the benefit provisions reflected in this valuation are those which were in effect on June 30, 2023. There were no changes to the benefit provisions since the prior valuation. The benefit provisions are summarized in Section D of this Report.

Assumptions and Methods

The Board has sole authority to determine the actuarial assumptions used for the Plan. The assumptions that are based upon the actuary's recommendations are internally consistent and are reasonably based on the actual past experience of the Plan.

The current assumptions were adopted by the Board in 2019 for first use in the June 30, 2019 valuation following a regularly scheduled experience study. The rationale for all of the current assumptions is included in that report, dated January 8, 2019.

The Board voted to lower the discount rate assumption from 7.00% to 6.75% effective with the June 30, 2022 valuation and updated the funding policy to reflect a 20-year closed, layered amortization of the Unfunded Liabilities.

There were no changes in actuarial methods and assumptions since the prior valuation.

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. The actuarial calculations presented in this Report are intended to provide information for rational decision making.

Data

The valuation was based upon information as of June 30, 2023, furnished by Tucson Supplemental Retirement System staff, concerning Plan benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by Tucson Supplemental Retirement System staff.

Certification

All of our work conforms with generally accepted actuarial principles and practices, and to the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of, where applicable, the Internal Revenue Code, and ERISA.

The signing actuaries are independent of the plan sponsor. Dana Woolfrey is an Enrolled Actuary and both Dana Woolfrey and Paul Wood are Members of the American Academy of Actuaries, and meet the Qualification Standards of the American Academy of Actuaries.

Respectfully submitted,

EXECUTIVE SUMMARY

Actuarial Valuation

Valuations are prepared annually, as of July 1 of each year, the first day of the fiscal year. The primary purposes of the valuation report are to measure the plan's liabilities, to determine the required contribution rates and to analyze changes in the Tucson Supplemental Retirement System's actuarial position.

In addition, the report provides summaries of the member data, financial data, plan provisions, and actuarial assumptions and methods.

Experience During the Year

As shown on page B-6, the expected accrued liability as of June 30, 2023, was \$1,228.3 million. The actual accrued liability was \$1,261.4 million, thus, the plan experienced a liability loss of \$33.1 million during fiscal year 2023, primarily due to salary increases being more than expected. The plan experienced an asset loss of \$12.7 million during fiscal year 2023. Please see page B-6 for further information.

Financial Position

The funded ratio decreased on an actuarial value basis from June 30, 2022 to June 30, 2023, primarily due to liability experience from salary increases greater than expected and recognizing past deferred asset losses. On a market value basis, the funded ratio increased from June 30, 2022 to June 30, 2023 due to market value investment returns greater than the assumed 6.75% during the year.

Funded Status Summary (\$ in millions)		
Valuation Date	June 30, 2023	June 30, 2022
Accrued Liability	\$1,261.4	\$1,214.2
Actuarial Value of Assets (smoothed)	<u>946.0</u>	<u>928.9</u>
Unfunded Accrued Liability	\$315.4	\$285.3
Funded Ratio (AVA basis)	75.00%	76.50%
Market Value of Assets	\$906.4	\$863.1
Unfunded Accrued Liability	\$355.0	\$351.1
Funded Ratio (MVA basis)	71.86%	71.08%

Financing Objectives and Funding Policy

The financing objective of the Retirement System is to establish and receive contributions, expressed as percent of active member payroll, which will remain approximately level from year to year and thereby minimize inter-generational cost transfers.

The Tucson Supplemental Retirement System is supported by member contributions, employer contributions, and investment return from retirement system assets. Currently, members hired prior to July 1, 2006 contribute a flat rate, while members hired after June 30, 2006 are subject to variable rates that are 50% of their tiers' normal cost, subject to a floor of 5.0%. The rates are outlined in the table below. These rates are further subject to a 5.00% floor and a roundup policy rounding to the next 0.25% percent - in this case, making the fiscal years 2024 & 2025 recommended rates 5.00%, 7.25%, and 5.75%, respectively.

Employee Group	Actuarial (Non Rounded) Rates	
	FY 2025*	FY 2024*
Employees hired prior to July 1, 2006	5.00%	5.00%
Tier I Variable - employees hired after June 30, 2006, before July 1, 2011	7.09%	7.19%
Tier II Variable - employees hired after June 30, 2011	5.60%	5.59%

**Before application of 5.0% floor or roundup policy.*

Total contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:

- (1) cover the normal cost (the actuarial present value of benefits allocated to the current year by the actuarial cost method described in Section C); and
- (2) finance over a period of future years the annual payment of the unfunded actuarial accrued liability (the actuarial present value of benefits not covered by valuation assets and anticipated future normal costs); and
- (3) cover administrative expenses of the System.

It is assumed that the investment return assumption of 6.75% is net of investment expenses. The additional explicit administrative expense charge to the contribution rate is applied to the recommended employer contribution.

The Total Actuarially Determined Contribution which is used to set rates for fiscal year 2025 decreased from 26.45% as of the prior valuation to 25.96% as of the current valuation. The decrease can be attributed to a reduced normal cost rate as new members enter the plan under the Tier 2 benefits as well as a reduction in the cost to amortize the UAAL as a percentage of pay due to the increase in total employee payroll.

Contribution Requirement Summary All Numbers Reported Middle of Year, Percent of Pay		
Fiscal Year Beginning	July 1, 2023	July 1, 2022
Total Actuarial Determined Contribution	25.96%	26.45%
Estimated Member Contribution	5.54%	5.52%
Net Annual Required Contribution	20.42%	20.93%

Normal Cost by Tier			
Aggregate Total Normal Cost			11.95%
Tier I Normal Cost (Hired before July 1, 2006)			13.09%
Tier I Normal Cost (Hired between July 1, 2006 and June 30, 2011)			14.17%
Tier II Normal Cost (Hired after June 30, 2011)			11.19%
Member and City Rates by Tier for Fiscal Year Beginning July 1, 2024			
Tier	Member Contribution*	City Contribution*	Total Contribution
Hired Prior to July 1, 2006	5.00%	20.96%	25.96%
Hired between July 1, 2006 and June 30, 2011	7.09%	18.87%	25.96%
Hired after June 30, 2011	5.60%	20.36%	25.96%
Blended Across Tiers	5.54%	20.42%	25.96%

*Prior to application of roundup policy and funding policy minimums. It is anticipated that the three member groups will contribute 5.00%, 7.25%, and 5.75%, respectively. It is anticipated that the City will contribute 27.50% of pay, in accordance with the funding policy minimum.

The recommended rates, with the application of the administrative expenses and the round up policy, are illustrated below:

FY 25 Recommended Rates Based on TSRS Funding Policy (full description of the TSRS funding policy may be found in Section I)				
	Actuarial Rate (50% of Normal Cost)	Round up to nearest .25%	FY 25 Board Recommended Rates	FY 24 Adopted Rates

Development of the Actuarially Determined Contribution

Fiscal Year Beginning ¹	July 1, 2023	July 1, 2022
1. Total Normal Cost	11.95%	12.12%
2. Total Contribution to the Unfunded Actuarial Accrued Liability ²	13.57%	13.85%
3. Administrative Expenses	<u>0.44%</u>	<u>0.48%</u>
4. Total Computed Contribution	25.96%	26.45%
5. Member Financed Portion ³	5.54%	5.52%
6. City Financed Portion ⁴	20.42%	20.93%

¹One-year lag in contribution timing. Contribution rates developed for the fiscal year beginning July 1, 2023 are used to set the actual contribution rates for fiscal year beginning July 1, 2024.

² Financed using a closed 20-year, layered amortization as a level percent of active member payroll starting June 30, 2022.

³ This percentage reflects the fact that members hired prior to July 1, 2006 contributed 5.00% of pay per year and members hired between July 1, 2006 and June 30, 2011 (Tier I variable class) and for those hired after July 1, 2011 (Tier II variable class), employee contributions are 50% of the respective Normal Cost for each class with a floor of 5.0%. The employee contribution rates, before application of the floor or roundup policy, for fiscal year 2025 are 7.09% and 5.60%, respectively.

⁴Prior to round up policy and application of 27.5% minimum.

SECTION D

SUMMARY OF BENEFIT PROVISIONS

SUMMARY OF BENEFIT PROVISIONS

JUNE 30, 2023

NORMAL RETIREMENT (NO REDUCTION FACTOR)

Eligibility :

Tier 1 – Members hired before July 1, 2011. Age 62, or a combination of age and creditable service equal to 80 (for those hired on or after July 1, 2009, eligibility at age 62 requires a minimum of 5 years of accrued service).

Tier 2 – Members hired on or after July 1, 2011. Age 65 with 5 years of service or a combination of age and creditable service equal to 85 and the attainment of age 60.

Amount - Creditable service times 2.25% of average final compensation for Tier 1 and 2.00% of average final compensation for Tier 2.

Average Final Compensation - The average monthly creditable compensation for the period of 36 consecutive months during which the member's creditable compensation was the highest during the 120 months immediately preceding the date of retirement for Tier 1 and 60 consecutive months during which the member's creditable compensation was the highest during the 120 months immediately preceding the date of retirement for Tier 2. Effective July 1, 2000, accrued unused sick leave at the final salary shall be substituted for an equal number of hours at the beginning of the 36 month period for Tier 1.

EARLY RETIREMENT (REDUCTION FACTOR)

Eligibility - Age 55 with 20 or more years of creditable service for Tier 1 and age 60 with 20 or more years of creditable service for Tier 2.

Amount - An amount computed as for normal retirement but reduced by 1/2 of 1% per month for each month (6% per year) retirement precedes normal retirement.

DEFERRED RETIREMENT (VESTED TERMINATION)

Eligibility - 5 or more years of accrued service. Deferred retirement benefits for terminated vested employee becomes automatic at age 62 (age 65 for Tier 2) or when a combination of age and creditable service equals 80 (85 with the attainment of age 60 for Tier 2), unless the member elects to withdraw the employee contribution account in lieu of a deferred retirement benefit. In addition to the eligibility listed above, the term-vested member may choose an Early Retirement (minimum age of 55 for Tier 1 and 60 for Tier 2 and minimum service of 20 yrs) subject to the same reduction – reduced by ½ of 1% per month for each month (6% per year) retirement precedes normal retirement eligibility.

Amount - An amount computed as for normal retirement.

DISABILITY RETIREMENT

Eligibility - Eligibility requires 10 or more years of credited service and a disability that is total and permanent.

Amount - An amount computed as for normal retirement. Disability Retirement Benefits are offset, if the combination of all employer-provided benefits exceeds 100% of the members adjusted income base, then members pension benefit from TSRS is reduced so income does not exceed the 100% maximum allowed.

PRE-RETIREMENT SURVIVOR BENEFITS

Eligibility - 5 or more years of accrued service and not eligible to retire.

Amount - Lump sum payment equal to twice the member's contributions, with interest.

Eligibility - After attaining eligibility for retirement, in the event the member dies prior to submitting an application for retirement benefits:

Amount - If the member is married, a default provision allows the member's spouse to elect to receive either a lump sum payment of twice the member's contributions account, or receive a lifetime annuity benefit determined as if the member had elected a joint & last survivor benefit of 100% survivor annuity prior to death. If the member is not married and has named a single non-spousal beneficiary, the beneficiary may elect to receive either a lump sum payment of twice the member's contributions account, or receive a 15 year annuity benefit determined as if the member elected payment of a 15 year term certain annuity. If the member has named multiple designated beneficiaries, a lump sum refund of the member's account balance will be paid to the named beneficiaries.

OTHER TERMINATION BENEFITS

Eligibility - Termination of employment without eligibility for any other benefit.

Amount - Accumulated contributions and interest in members account at time of termination.

EMPLOYEE CONTRIBUTIONS

As of July 1, 2017, interest is credited to member accumulated contributions accounts as compound interest two times per year at an annual interest rate of 3.0%. For those hired prior to July 1, 2006, employee contributions are 5.00% of salary. For those hired between July 1, 2006 and June 30, 2011

(Tier I variable class) and for those hired after July 1, 2011 (Tier II variable class), employee contributions are 50% of the respective Normal Cost for each class, with a floor of 5.0%. The employee contributions for the Tier I and Tier II variable classes for FY 2025 are 7.09% and 5.60%, respectively, before application of the floor or roundup policy.

CITY CONTRIBUTIONS

City Contributions are actuarially determined; which together with employee contributions and investment earnings will fund the obligations of the System in accordance with generally accepted actuarial principles. (please refer to the Funding Policy in Section I of this report).

POST-RETIREMENT ADJUSTMENTS

The TSRS Board has established formal policies to determine whether the system shall fund an annual supplemental post-retirement benefit payment to retired members and beneficiaries.

SECTION G

ACTUARIAL ASSUMPTIONS AND METHODS

SUMMARY OF ACTUARIAL METHODS AND ASSUMPTIONS

I. Valuation Date

The valuation date is July 1st of each plan year. This is the date as of which the actuarial present value of future benefits and the actuarial value of assets are determined.

II. Actuarial Cost Method

The actuarial valuation uses the Entry Age Normal actuarial cost method. Under this method, the employer contribution rate is the sum of (i) the employer normal cost rate, and (ii) a rate that will amortize the unfunded actuarial liability.

1. The valuation is prepared on the projected benefit basis. The present value of each participant's expected benefit payable at retirement or termination is determined, based on age, service, sex, compensation, and the interest rate assumed to be earned in the future (6.75%). The calculations take into account the probability of a participant's death or termination of employment prior to becoming eligible for a benefit, as well as the possibility of his terminating with a service benefit. Future salary increases are also anticipated. The present value of the expected benefits payable on account of the active participants is added to the present value of the expected future payments to retired participants and beneficiaries to obtain the present value of all expected benefits payable from the Plan on account of the present group of participants and beneficiaries.
2. The employer contributions required to support the benefits of the Plan are determined following a level funding approach, and consist of a normal cost contribution and an accrued liability contribution.
3. The normal contribution is determined using the Entry Age Normal method. Under this method, a calculation is made to determine the average uniform and constant percentage rate of employer contribution which, if applied to the compensation of each new participant during the entire period of his anticipated covered service, would be required in addition to the contributions of the participant to meet the cost of all benefits payable on their behalf. Effective July 1, 2013 the TSRS funding policy requires the computation of normal cost separately for those members in Tier 1 and Tier 2 (the variable rate tiers).
4. The unfunded accrued liability contributions are determined by subtracting the actuarial value of assets from the actuarial accrued liability. Amortization bases are established each year and amortized over closed 20-year periods as a level percentage of pay. It is assumed that payments are made throughout the year.

5. Administrative expenses for the recent year will be added to the employer normal cost in the current valuation and will be reflected in the recommended employer rate for the upcoming fiscal year.

III. Actuarial Value of Assets

The actuarial value of assets is based on recognizing gains and losses over a five-year period where gains and losses are determined by comparing the projected market value return (based on the prior year’s market value of assets, cash flows during the year and expected investment returns on those amounts) to the actual market investment return.

IV. Actuarial Assumptions

A. Economic Assumptions

1. Investment return: 6.75% per annum, compounded annually, composed of an assumed 2.50% inflation rate and a 4.25% real rate of return. This rate represents the assumed return, net of all investment expenses.
2. Salary increase rate:

Sample Attained Service	Percentage Increase in Salary with Less than Five Years of Service		
	Merit/Productivity	Inflation	Total
0	3.50 %	2.50 %	6.00 %
1	3.50	2.50	6.00
2	3.00	2.50	5.50
3	2.75	2.50	5.25
4	2.50	2.50	5.00

Sample Attained Age	Percentage Increase in Salary with Five or More Years of Service		
	Merit/Productivity	Inflation	Total
25	3.00 %	2.50 %	5.50 %
30	2.75	2.50	5.25
35	2.40	2.50	4.90
40	1.70	2.50	4.20
45	1.10	2.50	3.60
50	0.75	2.50	3.25
55	0.50	2.50	3.00
60	0.50	2.50	3.00
65	0.50	2.50	3.00

3. Payroll growth rate: In the amortization of the unfunded actuarial accrued liability, payroll is assumed to increase 3.00% per year. This increase rate is primarily due to the effect of inflation on salaries, with no allowance for future membership growth.

B. Demographic Assumptions

1. Mortality rates – Healthy Pre-Retirement Mortality RP-2014 Employee Mortality Tables projected with the ultimate rates of the MP-2018 projection scale. Healthy Post-Retirement Mortality RP-2014 Healthy Annuitant Mortality Tables projected with the ultimate rates of the MP-2018 projection scale. Disabled Mortality RP-2014 Disabled Mortality Tables projected with the ultimate rates of the MP-2018 projection scale. Mortality rates were adjusted to include margin for future mortality improvement as described in the table name above. Sample 2023 rates shown below:

40	1.16	0.60
45	1.53	0.84
50	1.86	1.09
55	2.13	1.32
60	2.43	1.55
65	2.89	1.91
70	3.69	2.58
75	4.96	3.75
80	7.00	5.58
85	10.35	8.26
90	15.91	12.20

3. Disability rates. Sample rates shown below:

Sample Attained Ages	Probability of Disablement Next Year	
	Men	Women
25	0.01 %	0.01 %
30	0.07	0.07
35	0.09	0.09
40	0.14	0.14
45	0.17	0.17
50	0.25	0.25
55	0.36	0.36
60	0.48	0.48

4. Termination rates (for causes other than death, disability or retirement): Termination rates are based on service and age. Termination rates are not applied after a member becomes eligible for a retirement benefit. Rates are shown:

Sample Attained Age	Years of Credible Service	Probability of Termination
Any	0	19.00 %
	1	14.00
	2	11.00
	3	9.00
	4	9.00
20	5 & over	7.40
25		7.40
30		6.98
35		4.88
40		3.83
45		3.10
50		2.68
55		2.57

5. Forfeiture rates: The percentages below represent the probability that a vested terminated member will take a refund of contributions rather than receive a deferred annuity benefit.

Sample Ages	% of Vested Terminating Members Choosing Refund at Termination
Under 30	50 %
30	45
35	40
40	35
45	30
50	25
55	20
60 and Over	0

6. Retirement rates for Tier 1. For those ages 62+, the Rule of 80 retirement rates only applies if the Rule of 80 is attained by age 62.

Attained Age	Tier 1 Members Percentage of Those Eligible Retiring During the Year		
	Rule of 80	Age Based	Early
50-54	24.0 %		6.0 %
55-59	24.0		
60	24.0		
61	24.0		
62	24.0	33.0 %	
63-65	24.0	18.0	
66	24.0	40.0	
67-69	24.0	30.0	
70 & Over	100.0	100.0	

Retirement rates for Tier 2. For those ages 65+, the Rule of 85 retirement rates only applies if the Rule of 85 is attained by age 65.

Attained Age	Tier 2 Members Percentage of Those Eligible Retiring During the Year		
	Rule of 85	Age Based	Early
60	24.0 %		6.0 %
61	24.0		6.0
62	24.0		6.0
63	24.0		6.0
64	24.0		6.0
65	24.0	18.0 %	
66	24.0	40.0	
67-69	24.0	30.0	
70 & Over	100.0	100.0	

Deferred vested members are assumed to retire at age first eligibility for unreduced benefits.

C. Other Assumptions

1. Percent married: 80% of employees are assumed to be married.
2. Age difference: Male members are assumed to be three years older than their spouses, and female members are assumed to be three years younger than their spouses.
3. Cost of living adjustment: None.
4. Optional forms: Members are assumed to elect the normal form of benefit.
5. Current and future deferred vested participants are assumed to retire at the earlier of age 62 and eligibility for rule of 80 for tier 1 and the earlier of age 65 and eligibility for the rules of 85 (but at least 60) for Tier 2.
6. Administrative expenses: Administrative expenses are added to the employer normal cost , before application of the round up policy.
7. Pay increase timing: End of year.
8. Decrement timing: Decrements of all types are assumed to occur mid-year.

9. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
10. Decrement relativity: Decrement rates are used directly, without adjustment for multiple decrement table effects.
11. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made.
12. Benefit and Eligibility Service due to Accrued Sick and Vacation Leave at Retirement and Termination: Tier 1 Members are assumed to have an additional 0.019 years per year of benefit and eligibility service at early or normal retirement and termination due to accrued sick and vacation leave. This assumption was developed using sick and vacation leave and service amounts for active members included in the actuarial valuation as of June 30, 2013.
13. Adjustment to Final Average Pay due to accrued sick leave at retirement and termination: For each year of additional service attributable to the prior service assumption, final average pay is assumed to increase 2.6%.

SECTION H

30-YEAR DETERMINISTIC PROJECTIONS

Tucson Supplemental Retirement System Historical and Projected Funding Results

(shows trend and projection of future funded ratios)
June 30, 2023

Funding policy reflects 27.50% of pay minimum City contribution until full funding is reached. Assumes actuarial value of assets earns 6.75% returns.

SECTION I

FUNDING POLICY OF THE TSRS BOARD

Basis for variable employee contribution rates

Effective July 1, 2013 the contribution requirement for members hired after July 1, 2006 was changed from 40% of the Actuarial Determined Contribution (or “ADC,” as defined below) to a range of 50% to 100% of the normal cost of their given tier. In no event shall the variable contribution tier members contribute less than 5% of pay as set forth in TCC §22-34(a) and (b). Members hired prior to 7/1/2006 contribute 5% of pay.

Amortization Policy

Effective June 30, 2022, the Board has adopted a 20-year closed, layered, level percent of pay amortization policy. An initial amortization base is determined as of June 30, 2022 based on the unfunded liability at that time, and that amount is then amortized over a 20-year closed period, assuming that the contribution amounts will remain level as a percent of the total payroll (so the dollar amount of the contribution is assumed to grow each year). Each subsequent year after the June 30, 2022 valuation, any actuarial gains or losses will be used to determine new amortization bases and amortized over a 20-year closed period.

Administrative Expenses

The annual administrative expenses incurred by the System, based on the administrative operating budget approved by the Board in advance of the fiscal year and determined as of the end of the fiscal year, shall be included in the calculation of the Actuarially Determined Contribution in accordance with sound actuarial principles. Administrative expenses paid by the System and included in the calculation of the ADC shall be reasonable and appropriate, and shall include staff salaries and related overhead expenses, actuarial, legal and other professional consulting fees, accounting charges, compliance expenses, and other fees and expenses necessary for the efficient administration of the System. Investment fees and expenses shall not be included in the calculation of the ADC.

Contribution Rounding Policy

- I. Member Contribution Rates: Member Contributions for Legacy Members, Tier I Members and Tier II Members shall be determined by the TSRS actuary pursuant to TCC Section 22-34: members hired prior to July 1, 2006 (the “Legacy Members”), members hired between July 1, 2006 and June 30, 2011 (“Tier I Members”) and members hired on or after July 1, 2011 (“Tier II Members”). The actuarially determined Member Contribution rate for each group shall be referred to as the “Calculated Rate” for the applicable group.

The Board will then review the Calculated Rate for each member group and set the “Charged Rate” for the upcoming fiscal year. The Charged Rate will equal the Calculated Rate, rounded up to the nearest 0.25%. The Charged Rate for a member group shall never be less than the Calculated Rate for that member group (for that same fiscal year). The Charged Rate for the legacy members is set at 5.00%.

- II. City Contribution Rates: The City Contribution rate for a particular fiscal year equals the difference between the Actuarially Determined Contribution and the Member Contribution rate(s). TCC §22-30(t). Because there are three different Member Contribution rates, the TSRS actuary shall calculate a City Contribution rate for each member group and a blended City Contribution rate for the entire member population. In no event shall the blended City Contribution rate for the entire member population be less than the City Contribution rate for any member group. The City Contribution rates calculated by the TSRS actuary are referred to as the “Calculated Rates.”

The Board will then review the Calculated Rates and set the “Charged Rate” for the City Contribution for the upcoming fiscal year. The Charged Rate will equal the blended Calculated City Contribution rate, rounded up to the nearest 0.50. The Charged Rate shall be rounded up to the nearest 0.50 instead of the nearest 0.25 because the Charged Rate is a blended rate. The Charged Rate shall never be less than the Calculated Rate for any member group for that same fiscal year.

- III. Funded Status of TSRS: It is the goal of the Board to increase the funded status of TSRS. The Board anticipates that Calculated Rates for both Member Contributions and City Contributions may decrease from time to time, based on various actuarial factors. The Board will not recommend a decrease in the Charged Rate for Member and/or City Contributions until such point as TSRS is fully funded because the unfunded accrued liability has been extinguished, and the Calculated Rates for Member and City Contributions represent the payment of the normal cost of benefits only. Moreover, the Board shall recommend a decrease in the Charged Rates for Member Contributions only to the extent that the Charged Rates for Tier I Member Contributions and Tier II Member Contributions decrease simultaneously, in the same percentage of pay.

SECTION J

RISKS ASSOCIATED WITH MEASURING THE ACCRUED LIABILITY

Risks Associated With Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. Investment risk – actual investment returns may differ from the expected returns;
2. Asset/Liability mismatch – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. Contribution risk – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. Salary and Payroll risk – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. Longevity risk – members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
6. Other demographic risks – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the

plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution rate shown on Exhibit B.5 may be considered as a minimum contribution rate that complies with the Board’s funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	<u>June 30, 2023</u>	<u>June 30, 2022</u>	<u>June 30, 2021</u>	<u>June 30, 2020</u>
Ratio of the market value of assets to total payroll	5.3	5.9	7.3	6.5
Ratio of actuarial accrued liability to payroll	7.4	8.3	8.5	9.0
Ratio of actives to retirees and beneficiaries	0.9	0.8	0.8	0.8
Ratio of net cash flows to market value of assets	-4%	-4%	-4%	-5%
Duration of the actuarial accrued liability	10.8	10.7	10.6	10.6

Ratio of Market Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 4.0 times the payroll, a return on assets 5% different than assumed would equal 20% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 5.5 times the payroll, a change in liability 2% other than assumed would equal 11% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

Ratio of Actives to Retirees and Beneficiaries

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

Ratio of Net Cash Flow to Market Value of Assets

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

Duration of Actuarial Accrued Liability

The duration of the actuarial accrued liability may be used to approximate the sensitivity to a 1% change in the assumed rate of return. For example, duration of 10 indicates that the liability would increase approximately 10% if the assumed rate of return were lowered 1%.

Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability

Low-Default-Risk Obligation Measure

Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, Measuring Pension Obligations and Determining Pension Plan Costs or Contributions. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the “Low-Default-Risk Obligation Measure” (LDROM). The rationale that the ASB cited for the calculation and disclosure of the LDROM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

“The ASB believes that the calculation and disclosure of this measure provides **appropriate, useful information for the intended user regarding the funded status of a pension plan**. The calculation and disclosure of this additional measure is **not intended to suggest that this is the “right” liability measure** for a pension plan. However, the ASB does believe that **this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.**”

Comparing the Accrued Liabilities and the LDROM

One of the fundamental financial objectives of the Tucson Supplemental Retirement System (TSRS) is to finance each member’s retirement benefits over the period from the member’s date of hire until the member’s projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities of TSRS is set equal to the **expected return** on the System’s diversified portfolio of assets (referred to sometimes as the investment return assumption). For TSRS, the investment return assumption is 6.75%.

The LDROM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDROM is very dependent upon market interest rates at the time of the LDROM measurement. The lower the market interest rates, the higher the LDROM, and vice versa. The LDROM results presented in this report are based on the entry age actuarial cost method and discount rates based upon the intermediate rate from the FTSE Pension Discount Curve and Liability Index published by the Society of Actuaries. This rate is 4.90% as of June 30, 2023. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan’s benefit obligation.

The difference between the two measures (Valuation and LDROM) is one illustration of the savings the sponsor anticipates by taking on risk in a diversified portfolio.

Valuation Accrued Liabilities	LDROM
\$1,261,411,189	\$1,533,250,981
