Board Members

City of Atlanta General Employees' Pension Fund Employees of the Atlanta Board of Education
Atlanta, Georgia

Dear Board Members:

We are pleased to submit this Actuarial Valuation and Review as of July 1, 2018. It summarizes the actuarial data used in the valuation, analyzes the preceding year's experience, and establishes the funding requirements for the fiscal year ending June 30, 2020.

This report was prepared in accordance with generally accepted actuarial principles and practices at the request of the Board to assist in administering the Pension Fund. The census information on which our calculations were based was prepared by Zenith American Solutions and the financial information was provided by KPMG. That assistance is gratefully acknowledged.

The actuarial calculations were directed under the supervision of Jeanette R. Cooper, FSA, FCA, MAAA, Enrolled Actuary. Ms. Cooper is a member of the American Academy of Actuaries and meets the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion herein. To the best of her knowledge, the information supplied in this actuarial valuation is complete and accurate. Further, in her opinion, the assumptions as approved by the Board are reasonably related to the experience of and the expectations for the Fund.

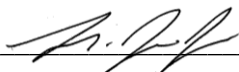

We hereby certify that the City of Atlanta General Employees' Pension Fund for the Employees of the Atlanta Board of Education has been funded in conformity with the minimum funding standards specified in Code Section 47-20-10 of the Official Code of Georgia Annotated known as the Public Retirement Systems Standards Law. This certification covers the 2018 fiscal year of the Plan.

We look forward to reviewing this report at your next meeting and to answering any questions.

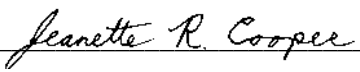

Sincerely,

Segal Consulting, a Member of The Segal Group, Inc.

By:

Leon F. (Rocky) Joyner, Jr., ASA, FCA, MAAA, EA
Vice President and National Public Sector Retirement Practice Leader

Jeanette R. Cooper, FSA, FCA, MAAA, EA

Section 1: Actuarial Valuation Summary

Purpose and Basis

This report was prepared by Segal Consulting to present a valuation of the City of Atlanta General Employees' Pension Fund Employees of the Atlanta Board of Education as of July 1, 2018. The valuation was performed to determine whether the assets and contributions are sufficient to provide the prescribed benefits. The measurements shown in this actuarial valuation may not be applicable for other purposes. In particular, the measures herein are not necessarily appropriate for assessing the sufficiency of Fund assets to cover the estimated cost of settling the Fund's benefit obligations. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements; and changes in plan provisions or applicable law.

Certain disclosure information required by GASB Statements No 67 and 68 as of June 30, 2019 and June 30, 2018 was provided in separate reports.

The contribution requirements presented in this report are based on:

- The benefit provisions of the Pension Fund, as administered by the Board;
- The characteristics of covered active participants, inactive participants, and retired participants and beneficiaries as of June 30, 2018, provided by Zenith American Solutions;
- The assets of the Fund as of June 30, 2018, provided by KPMG;
- Economic assumptions regarding future salary increases and investment earnings;
- Other actuarial assumptions regarding employee terminations, retirement, death, etc. and
- The funding policy adopted by the School Board.

Significant Issues

1. The July 1, 2018 valuation is used to determine the recommended contribution for the fiscal year period July 1, 2019 to June 30, 2020 (FY'20). The recommended contribution is adjusted for interest to the middle of the fiscal period and satisfies the minimum funding standards under Georgia law Code Section 47-20-10.
2. The plan receives employee contributions of 7% or 8% of base salary. The School Board contributes the recommended contribution amount which is net of employee contributions. The recommended contribution amount is composed of the employer normal cost including administrative expenses and a payment to amortize the Unfunded Actuarial Accrued Liability (UAAL).
3. On June 2, 2014, the Atlanta Board of Education adopted a resolution (Report 13/14-0117) to change the funding policy. The revised policy increases the FY '14 contribution 3.0% annually until the Plan is fully funded.
4. If the Fund earns the assumed 7.25% annual investment return and increases the contribution 3.0% annually, then the UAAL would be fully amortized in around 8.5 years. If the Fund earns the assumed 7.25% annual investment return and does not increase the contribution annually, then the UAAL would be fully amortized in about 9.7 years.
5. Segal Consulting ("Segal") recommends an actuarial funding method that targets 100% funding of the actuarial accrued liability. Generally, this implies payments that are ultimately at least enough to cover normal cost, interest on the UAAL and the principal balance. The funding policy adopted by the School Board meets this standard.
6. The School Board's recommended contribution for FY '20 is \$56.7 million. This amount is an increase of \$1.6 million from the prior valuation's contribution due to a mandated overall 3% increase.
7. The total contributions made during the fiscal year ending June 30, 2018 were sufficient to cover the normal cost plus interest on the UAAL, thereby reducing the UAAL by \$24.1 million.
8. The funded ratio (the ratio of the actuarial value of assets to actuarial accrued liability) is 28.89%, compared to the prior year funded ratio of 25.70%. This ratio is one measure of funding status, and its history is a measure of funding progress. Using the market value of assets, the funded ratio is 29.45%, compared to 25.98% as of the prior valuation date. These measurements are not necessarily appropriate for assessing the sufficiency of Fund assets to cover the estimated cost of settling the Fund's benefit obligation or the need for or the amount of future contributions.
9. The UAAL is \$374.5 million, which is a decrease of \$24.1 million since the prior valuation.
10. The actuarial gain from investment and other experience is \$10,964, which is less than 0.1% of the actuarial accrued liability.
11. The net experience loss from sources other than investment experience was 0.4% of the actuarial accrued liability. This loss is not significant.

12. The rate of return on the market value of assets was 9.75% for the July 1, 2017 to June 30, 2018 plan year. The return on the actuarial value of assets was 8.83% for the same period due to the recognition of prior years' investment gains and losses. This resulted in an actuarial gain of \$2.2 million when measured against the assumed rate of return of 7.25%. Given the low fixed income interest rate environment, target asset allocation and expectations of future investment returns for various classes, we advise the Board to continue to monitor actual and anticipated investment returns relative to the assumed long-term rate of return on investments of 7.25%.
13. The actuarial value of assets is 98.11% of the market value of assets. The investment experience in the past years has only been partially recognized in the actuarial value of assets. As the deferred net gain is recognized in future years, the cost of the Plan is likely to decrease unless the net gain is offset by future experience. The recognition of the market gains of \$2.9 million will also have an impact on the future funded ratio.
14. There have been no changes in plan provisions, actuarial assumptions or methods since the last valuation.
15. Plan assets are currently roughly equal to three years of projected benefit payments. The imbalance between benefit levels in the Fund and the resources available to pay for them must continue to be addressed. We are available to prepare solvency projections upon request.
16. The disclosure information required for compliance with GASB Statement No. 67, *Financial Reporting for Pension Plans* for the fiscal year ended June 30, 2018, was released to the School Board's Finance Department on November 1, 2018. Draft information required for compliance with GASB Statement No. 68, *Accounting and Financial Reporting for Pensions*, for the fiscal year ended June 30, 2019, based on a June 30, 2018 measurement date was released to the School Board's Finance Department on May 1, 2019.
17. This actuarial report as of July 1, 2018 is based on financial and demographic data as of that date. Changes subsequent to that date are not reflected and will affect future actuarial costs of the plan.
18. Since the actuarial valuation results are dependent on a given set of assumptions, there is a risk that emerging results may differ significantly as actual experience proves to be different from the assumptions. We have included a discussion of various risks that may affect the plan in *Section 2*.

Summary of Key Valuation Results

FISCAL YEAR		2019	2018

Important Information About Actuarial Valuations

An actuarial valuation is a budgeting tool with respect to the financing of future projected obligations of a pension plan. It is an estimated forecast – the actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.

In order to prepare a valuation, Segal Consulting (“Segal”) relies on a number of input items. These include:

Plan of benefits	Plan provisions define the rules that will be used to determine benefit payments, and those rules, or the interpretation of them, may change over time. Even where they appear precise, outside factors may change how they operate. It is important to keep Segal informed with respect to plan provisions and administrative procedures, and to review the plan summary included in our report to confirm that Segal has correctly interpreted the plan of benefits.
Participant data	An actuarial valuation for a plan is based on data provided to the actuary by the plan administrator. Segal does not audit such data for completeness or accuracy, other than reviewing it for obvious inconsistencies compared to prior data and other information that appears unreasonable. It is important for Segal to receive the best possible data and to be informed about any known incomplete or inaccurate data.
Assets	The valuation is based on the market value of assets as of the valuation date, as provided by KPMG. The School Board uses an “actuarial value of assets” that differs from market value to gradually reflect year-to-year changes in the market value of assets in determining the contribution requirements.
Actuarial assumptions	In preparing an actuarial valuation, Segal projects the benefits to be paid to existing plan participants for the rest of their lives and the lives of their beneficiaries. This projection requires actuarial assumptions as to the probability of death, disability, withdrawal, and retirement of each participant for each year. In addition, the benefits projected to be paid for each of those events in each future year reflect actuarial assumptions as to salary increases and cost-of-living adjustments. The projected benefits are then discounted to a present value, based on the assumed rate of return that is expected to be achieved on the plan’s assets. There is a reasonable range for each assumption used in the projection and the results may vary materially based on which assumptions are selected. It is important for any user of an actuarial valuation to understand this concept. Actuarial assumptions are periodically reviewed to ensure that future valuations reflect emerging plan experience. While future changes in actuarial assumptions may have a significant impact on the reported results, that does not mean that the previous assumptions were unreasonable.

The user of Segal’s actuarial valuation (or other actuarial calculations) should keep the following in mind:

- The actuarial valuation is prepared at the request of the Board. Segal is not responsible for the use or misuse of its report, particularly by any other party.
- An actuarial valuation is a measurement of the plan’s assets and liabilities at a specific date. Accordingly, except where otherwise noted, Segal did not perform an analysis of the potential range of future financial measures. The actual long-term cost of the plan will be determined by the actual benefits and expenses paid and the actual investment experience of the plan.
- Actuarial results in this report are not rounded, but that does not imply precision.
- If the Board is aware of any event or trend that was not considered in this valuation that may materially change the results of the valuation, Segal should be advised, so that we can evaluate it.
- Segal does not provide investment, legal, accounting, or tax advice. Segal’s valuation is based on our understanding of applicable guidance in these areas and of the plan’s provisions, but they may be subject to alternative interpretations. The Board should look to their other advisors for expertise in these areas.

As Segal Consulting has no discretionary authority with respect to the management or assets of the Fund, it is not a fiduciary in its capacity as actuaries and consultants with respect to the Fund.

Section 2: Actuarial Valuation Results

Participant Data

The Actuarial Valuation and Review considers the number and demographic characteristics of covered participants, including active participants, inactive vested participants, retired participants and beneficiaries.

This section presents a summary of significant statistical data on these participant groups.

More detailed information for this valuation year and the preceding valuation can be found in *Section 3, Exhibits A, B, and C.*

PARTICIPANT POPULATION: 2008 – 2018

Year Ended June 30 ¹	Active Participants ²	Inactive Vested Participants ³	Retired Participants and Beneficiaries	Total Non- Actives	Ratio of Non-Actives to Actives
2008	974	43	2,362	2,405	2.47
2010	871	38	2,467	2,505	2.88
2011	803	28	2,312	2,340	2.91
2012	763	26	2,253	2,279	2.99
2013	737	27	2,165	2,192	2.97
2014	698	33	2,141	2,174	3.11
2015	799	35	2,094	2,129	2.66
2016	738	33	2,028	2,061	2.79
2017	734	37	1,969	2,006	2.73
2018	662	36	1,926	1,962	2.96

¹ Prior to 2010, the valuation cycle was for the 12-month period ending December 31

² Excludes participants receiving Workers' Compensation benefits

³ Excludes terminated participants due a refund of employee contributions

Active Participants

Plan costs are affected by the age, years of service and payroll of active participants. In this year's valuation, there were 662 active participants with an average age of 49.8, average years of service of 11.4 years and average payroll of \$28,262. The 734 active participants in the prior valuation had an average age of 49.7, average service of 11.2 years and average payroll of \$27,185.

Inactive Participants

In this year's valuation, there were 36 participants with a vested right to a deferred or immediate vested benefit. In addition, there were 129 participants entitled to a return of their employee contributions.

Distribution of Active Participants as of June 30, 2018

ACTIVES BY AGE

ACTIVES BY YEARS OF SERVICE

Retired Participants and Beneficiaries

As of June 30, 2018, 1,624 retired participants and 302 beneficiaries were receiving total monthly benefits of \$4,232,313. For comparison, in the previous valuation, there were 1,668 retired participants and 301 beneficiaries receiving monthly benefits of \$4,278,928.

As of June 30, 2018, the average monthly benefit for retired participants and beneficiaries is \$2,197, compared to \$2,173 in the previous valuation. The average age for retired participants and beneficiaries is 76.0 in the current valuation, compared with 75.8 in the prior valuation.

Distribution of Pensioners as of June 30, 2018

AND AGE**

Historical Plan Population

The chart below demonstrates the progression of the active population over the last ten valuations. The chart also shows the changes among the retired population over the same time period.

PARTICIPANT DATA STATISTICS: 2008 – 2018

Year Ended June 30*	Active Participants			Retired Participants and Beneficiaries		
	Count	Average Age	Average Service	Count	Average Age	Average Monthly Amount
2008	974	49.8	13.3	2,362	74.2	\$1,854
2010	871	49.0	12.4	2,467	74.1	1,943
2011	803	49.8	13.6	2,312	74.3	2,004
2012	763	49.9	13.4	2,253	74.5	2,058
2013	737	50.3	13.6	2,165	74.7	2,106
2014	698	50.6	13.8	2,141	75.0	2,128
2015	799	49.4	11.8	2,094	75.4	2,149
2016	738	49.9	12.2	2,028	75.6	2,149
2017	734	49.7	11.2	1,969	75.8	2,173
2018	662	49.8	11.4	1,926	76.0	2,197

*Prior to 2010, the valuation cycle was for the 12-month period ending December 31.

Financial Information

Retirement plan funding anticipates that, over the long term, both contributions and investment earnings (less investment fees) will be needed to cover benefit payments and administrative expenses. Retirement plan assets change as a result of the net impact of these income and expense components.

Additional financial information, including a summary of transactions for the valuation year, is presented in *Section 3, Exhibits D, E and F*.

**COMPARISON OF CONTRIBUTIONS MADE WITH BENEFITS AND EXPENSES PAID
FOR YEARS ENDED JUNE 30, 2009 – 2018***

* Prior to 2018 investment earnings were net of investment fees and administrative expenses.

It is desirable to have level and predictable plan costs from one year to the next. For this reason, the Board has approved an asset valuation method that gradually adjusts to market value. Under this valuation method, the full value of market fluctuations is not recognized in a single year and, as a result, the asset value and the plan costs are more stable. The amount of the adjustment to recognize market value is treated as income, which may be positive or negative. Realized and unrealized gains and losses are treated equally and, therefore, the sale of assets has no immediate effect on the actuarial value.

DETERMINATION OF ACTUARIAL VALUE OF ASSETS FOR YEAR ENDED JUNE 30, 2018

1. Market value of assets, June 30, 2018				\$155,112,000
2.	Calculation of unrecognized return	Original Amount¹	Percent Deferred	Unrecognized Amount²
(a)	Year ended June 30, 2018	\$3,512,420	80%	\$2,809,936
(b)	Year ended June 30, 2017	7,276,137	60	4,365,681
(c)	Year ended June 30, 2016	-8,978,725	40	-3,591,490
(d)	Year ended June 30, 2015	-3,287,038	20	-657,408
(e)	Year ended June 30, 2014	11,935,912	0	<u>0</u>
(f)	Total unrecognized return			2,926,719
3.	Preliminary actuarial value: (1) - (2f)			\$152,185,281
4.	Adjustment to be within 20% corridor			0
5.	Final actuarial value of assets as of June 30, 2018: (3) + (4)			<u>152,185,281</u>
6.	Actuarial value as a percentage of market value: (5) ÷ (1)			98.11%
7.	Amount deferred for future recognition: (1) - (5)³			\$2,926,719

¹Total return minus expected return on a market value basis

²Recognition at 20% per year over five years

³Deferred return as of June 30, 2018 recognized in each of the next four years:

(a) Amount recognized on June 30, 2019	-\$295,442
(b) Amount recognized on June 30, 2020	361,966
(c) Amount recognized on June 30, 2021	2,157,711
(d) Amount recognized on June 30, 2022	702,484

Both the actuarial value and market value of assets are representations of the Fund’s financial status. As investment gains and losses are gradually taken into account, the actuarial value of assets tracks the market value of assets. The actuarial asset value is significant because the Plan’s liabilities are compared to these assets to determine what portion, if any, remains unfunded. Amortization of the unfunded actuarial accrued liability is an important element in determining the contribution requirement.

ACTUARIAL VALUE OF ASSETS VS. MARKET VALUE OF ASSETS AS OF JUNE 30, 2009 – 2018

Actuarial Experience

To calculate any actuarially determined contribution, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year actual experience is measured against the assumptions. If overall experience is more favorable than anticipated (an actuarial gain), any contribution requirement will decrease from the previous year. On the other hand, any contribution requirement will increase if overall actuarial experience is less favorable than expected (an actuarial loss).

Taking account of experience gains or losses in one year without making a change in assumptions reflects the belief that the single year's experience was a short-term development and that, over the long term, experience will return to the original assumptions. For contribution requirements to remain stable, assumptions should approximate experience.

If assumptions are changed, the contribution requirement is adjusted to take into account a change in experience anticipated for all future years.

The total gain is \$10,964, which includes \$2,200,930 from investment gains and \$2,189,966 in losses from all other sources. The net experience variation from individual sources other than investments was 0.4% of the actuarial accrued liability. A discussion of the major components of the actuarial experience is on the following pages.

ACTUARIAL EXPERIENCE FOR YEAR ENDED JUNE 30, 2018

1	Net gain from investments*	\$2,200,930
2	Net loss from administrative expenses	-5,051
3	Net loss from other experience	-2,184,915
4	Net experience gain: 1 + 2 + 3	\$10,964
*Details on next page.		

Investment Experience

A major component of projected asset growth is the assumed rate of return. The assumed return should represent the expected long-term rate of return, based on the Fund's investment policy. The rate of return on the market value of assets was 9.75% for the year ended June 30, 2018.

For valuation purposes, the assumed rate of return on the actuarial value of assets is 7.25%. The actual rate of return on an actuarial basis for the 2017-2018 plan year was 8.83%. Since the actual return for the year was greater than the assumed return, the Fund experienced an actuarial gain during the year ended June 30, 2018 with regard to its investments.

INVESTMENT EXPERIENCE

	Year Ended June 30, 2018		Year Ended June 30, 2017	
	Market Value	Actuarial Value	Market Value	Actuarial Value
1 Net investment income	\$13,692,000	\$12,271,322	\$16,529,000	\$10,642,121
2 Average value of assets	140,408,000	138,901,959	123,371,500	127,752,338
3 Rate of return: 1 ÷ 2	9.75%	8.83%	13.40%	8.33%
4 Assumed rate of return	7.25%	7.25%	7.50%	7.50%
5 Expected investment income: 2 x 4	10,179,580	10,070,392	9,252,863	9,581,425
6 Actuarial gain/(loss): 1 – 5	<u>\$3,512,420</u>	<u>\$2,200,930</u>	<u>\$7,276,137</u>	<u>\$1,060,696</u>

Because actuarial planning is long term, it is useful to see how the assumed investment rate of return has followed actual experience over time. The chart below shows the rate of return on an actuarial basis compared to the actual market value investment return for the last 20 years, including averages over select time periods.

INVESTMENT RETURN – ACTUARIAL VALUE VS. MARKET VALUE: 1998 - 2018

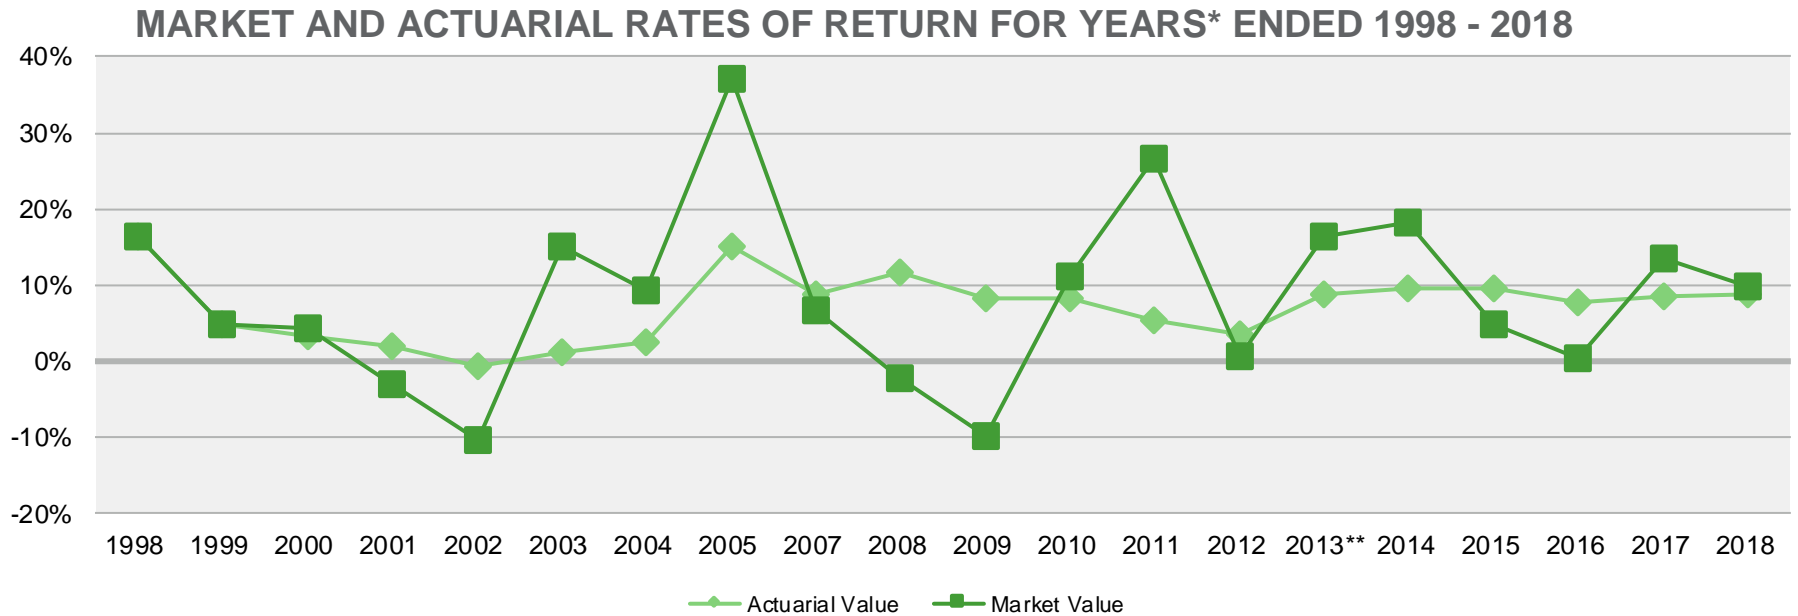

Year Ended June 30 ¹	Actuarial Value Investment Return		Market Value Investment Return		Year Ended June 30	Actuarial Value Investment Return		Market Value Investment Return	
	Amount	Percent	Amount	Percent		Amount	Percent	Amount	Percent

								9.10%	
								8.65%	
								9.47%	
								7.78%	

Note: Each year's yield is weighted by the average asset value in that year.

¹ Prior to 2007 financial information was based on 12-month periods ending December 31.

²The amounts for the year ended June 30, 2007 represent an 18-month period from January 1, 2006 through June 30, 2007.

As described earlier in this section, the actuarial asset valuation method gradually recognizes fluctuations in the market value rate of return. The goal of this is to stabilize the actuarial rate of return and to produce more level pension plan costs.

*Prior to 2007, financial information was based on 12-month periods ending December 31.

**Actuarial rate of return before method change.

Administrative Expenses

Administrative expenses for the year ended June 30, 2018 totaled \$212,000 compared to the assumption of \$200,000 as of the beginning of the year. This resulted in a loss of \$5,051 for the year. Because it is expected that these expenses will continue to increase, the actuarial assumption includes an annual 2.25% inflationary increase.

Other Experience

There are other differences between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- the extent of turnover among participants,
- retirement experience (earlier or later than projected),
- mortality (more or fewer deaths than projected),
- the number of disability retirements (more or fewer than projected), and
- salary increases (greater or smaller than projected).

The net loss from this other experience for the year ended June 30, 2018 amounted to \$2,184,915, which is 0.4% of the actuarial accrued liability.

Changes in the Actuarial Accrued Liability

The actuarial accrued liability as of July 1, 2018 is \$526,709,905, a decrease of \$9,806,185, or 1.8%, from the actuarial accrued liability as of the prior valuation date. The liability is expected to grow each year with normal cost and interest, and to decline due to benefit payments made. Additional fluctuations can occur due to actual experience that differs from expected (as discussed in the previous subsection).

Actuarial Assumptions

- There are no assumption changes reflected in this report.
- Administrative expenses increased with inflation to \$204,500 for the year beginning July 1, 2018.
- Details on actuarial assumptions and methods are in *Section 4, Exhibit I*.

Plan Provisions

- There were no changes in plan provisions since the prior valuation.
- A summary of plan provisions is in *Section 4, Exhibit II*.

Development of Unfunded Actuarial Accrued Liability

DEVELOPMENT FOR YEAR ENDED JUNE 30, 2018

1	Unfunded actuarial accrued liability at beginning of year	\$398,626,131
2	Normal cost at beginning of year	3,648,166
3	Total contributions	-54,913,000
4	Interest	
	• For whole year on 1 + 2	\$29,164,887
	• For half year on 3	<u>-1,990,596</u>
	Total interest	<u>27,174,291</u>
5	Expected unfunded actuarial accrued liability	\$374,535,588
6	Changes due to experience gains and losses	<u>-\$10,964</u>
7	Unfunded actuarial accrued liability at end of year	<u>\$374,524,624</u>

Actuarially Determined Contribution

The actuarially determined contribution for the 2019-2020 fiscal year is \$56,700,000, a 3% increase from the prior year. This recommended contribution is based on a funding policy that increases the 2013-2014 fiscal year contribution 3.0% annually until the plan is fully funded. If the plan earns the assumed rate of return (7.25%), then it will be fully funded by about the 2027-2028 fiscal year.

ACTUARIALY DETERMINED CONTRIBUTION FOR FISCAL YEAR BEGINNING JULY 1

	2019	2018
1. Total normal cost	\$3,167,011	\$3,448,166
2. Administrative expenses	204,500	200,000
3. Expected employee contributions	<u>-1,449,995</u>	<u>-1,546,446</u>
4. Employer normal cost: (1) + (2) + (3)	\$1,921,516	\$2,101,720
5. Actuarial accrued liability	526,709,905	536,516,090
6. Actuarial value of assets	152,185,281	137,889,959
7. Unfunded actuarial accrued liability: (5) - (6)	374,524,624	398,626,131
8. Payment on unfunded actuarial accrued liability	51,233,859	49,553,679
9. Adjustment for timing*	<u>3,544,625</u>	<u>3,444,601</u>
10. Total recommended contribution: (4) + (8) + (9)	<u>\$56,700,000</u>	<u>\$55,100,000</u>

*Actuarially determined contributions are assumed to be paid at the middle of every year.

History of School Board Contributions

A history of the most recent years of contributions is shown below.

HISTORY OF SCHOOL BOARD CONTRIBUTIONS: 2010 – 2019

Fiscal Year Ended June 30	Actuarially Determined Employer Contribution (ADEC) ¹	Actual Employer Contribution	Percent Contributed
2010	\$43,584,939	\$45,500,000	104.39%
2011	37,216,555	39,000,000 ²	104.79%
2012	38,830,014	39,000,000	100.44%
2013	42,169,235	43,013,000	102.00%
2014	47,435,217	48,000,000	101.19%
2015	48,900,000	48,905,000	100.01%
2016	50,400,000	50,400,000	100.00%
2017	51,900,000	52,000,000	100.19%
2018	53,500,000	53,400,000	99.81%
2019	56,700,000	--	--

¹Prior to GASB 67/68, this amount was the Annual Required Contribution (ARC).

²Changed from \$47,333,000 per School Board.

Risk

Since the actuarial valuation results are dependent on a given set of assumptions and data as of a specific date, there is a risk that emerging results may differ significantly as actual experience differs from the assumptions.

This report does not contain a detailed analysis of the potential range of future measurements, but does include a brief discussion of some risks that may affect the Fund. Upon request, a more detailed assessment of the risks can be provided to enable a better understanding of the risks specific to your Fund.

- Investment Risk (the risk that returns will be different than expected)

The market value rate of return over the last 20 years has ranged from a low of -10.43% to a high of 37.20%.

- Longevity Risk (the risk that mortality experience will be different than expected)

The actuarial valuation includes an expectation of future improvement in life expectancy. Emerging plan experience that does not match these expectations will result in either an increase or decrease in the unfunded actuarial accrued liability.

- Contribution Risk (the risk that actual contributions will be different from actuarially determined contribution)

The School Board's funding policy requires payment of the actuarially determined contribution. As long as this policy is adhered to, contribution risk is negligible.

- Demographic Risk (the risk that participant experience will be different than assumed)

Examples of this risk include:

- Actual retirements occurring earlier or later than assumed. The value of retirement plan benefits is sensitive to the rate of benefit accruals and any early retirement subsidies that apply.
- More or less active participant turnover than assumed.

While it is difficult to quantify the impact of potential experience, for your Fund, each 1% change in the actuarial cost factors would result in a change in the unfunded actuarial accrued liability of \$5,267,099 or 1.4%.

- Actual Experience Over the Last Ten Valuations and Implications for the Future

Past experience can help demonstrate the sensitivity of key results to the Fund's actual experience. Over the past ten valuations:

The investment gain(loss) on a market value basis for a year has ranged from a loss of \$24,022,547 in 2009 to a gain of \$18,873,727 in 2011.

The investment gain(loss) on an actuarial value basis has ranged from a loss of \$4,742,602 in 2012 to a gain of \$2,445,930 in 2015.

The non-investment gain(loss) for a year has ranged from a loss of \$24,645,931 in 2010 to a gain of \$58,769,199 in 2011.

The funded percentage on the actuarial value of assets has ranged from a low of 15.98% as of July 1, 2012 to a high of 28.89% as of July 1, 2018. The funded percentage on the market value of assets has ranged from a low of 15.78% as of July 1, 2009 to a high of 29.45% as of July 1, 2018.

- Maturity Measures

As pension plans mature, the cash need to fulfill benefit obligations will increase over time. Therefore, cash flow projections and analysis should be performed to assure that the Fund's asset allocation is aligned to meet emerging pension liabilities.

Currently the Plan has a non-active to active participant ratio of 2.96. For the prior year benefits paid and administrative expenses were \$2,024,000 less than contributions received. As the Fund matures, more cash will be needed from the investment portfolio to meet benefit payments.

GFOA Solvency Test

The Actuarial Accrued Liability represents the present value of benefits earned, calculated using the plan's actuarial cost method. The Actuarial Value of Assets reflects the financial resources available to liquidate the liability. The portion of the liability covered by assets reflects the extent to which accumulated plan assets are sufficient to pay future benefits, and is shown for liabilities associated with employee contributions, pensioner liabilities, and other liabilities. The Government Finance Officers Association (GFOA) recommends that the funding policy aim to achieve a funded ratio of 100 percent.

GFOA SOLVENCY TEST AS OF JUNE 30

	2018	2017
Actuarial accrued liability (AAL)		
• Active member contributions	\$14,141,251	\$15,157,178
• Retirees and beneficiaries	461,696,880	467,008,626
• Active and inactive members (employer-financed)	50,871,774	54,350,286
Total	\$526,709,905	\$536,516,090
Actuarial value of assets	\$152,185,281	\$137,889,959
Cumulative portion of AAL covered		
• Active member contributions	100.00%	100.00%
• Retirees and beneficiaries	29.90%	26.28%
• Active and inactive members (employer-financed)	0.00%	0.00%

Actuarial Balance Sheet

An overview of a plan’s funding is given by an Actuarial Balance Sheet. In this approach, first the amount and timing of all future payments that will be made by the Fund for current participants is determined. Then these payments are discounted at the valuation interest rate to the date of the valuation, thereby determining the present value, referred to as the “liability” of the Fund.

Second, this liability is compared to the assets. The “assets” for this purpose include the net amount of assets already accumulated by the Fund, the present value of future member contributions, the present value of future employer normal cost contributions, and the present value of future employer amortization payments for the unfunded actuarial accrued liability.

ACTUARIAL BALANCE SHEET

	Year Ended	
	June 30, 2018	June 30, 2017
Liabilities		
• Present value of benefits for retired participants and beneficiaries	\$461,696,880	\$467,008,626
• Present value of benefits for inactive vested participants	1,910,983	2,227,757
• Present value of benefits for active participants	<u>85,039,440</u>	<u>91,180,623</u>
Total liabilities	\$548,647,303	\$560,417,006
Assets		
• Total valuation value of assets	\$152,185,281	\$137,889,959
• Present value of future contributions by members	10,111,049	10,811,307
• Present value of future employer contributions for:		
» Entry age cost	11,826,349	13,089,609
» Unfunded actuarial accrued liability	<u>374,524,624</u>	<u>398,626,131</u>
Total of current and future assets	<u>\$548,647,303</u>	<u>\$560,417,006</u>

Actuarial Present Value of Accumulated Plan Benefits

The actuarial present value of accumulated plan benefits is shown below as of July 1, 2018 and as of July 1, 2017.

ACTUARIAL PRESENT VALUE OF ACCUMULATED PLAN BENEFITS

	Benefit Information Date	
	July 1, 2018	July 1, 2017
Actuarial present value of vested accumulated plan benefits:		
• Participants currently receiving payments	\$461,696,880	\$467,008,626
• Other vested benefits	<u>46,171,744</u>	<u>48,360,469</u>
• Total vested benefits (PVVB)	\$507,868,624	\$515,369,095
Actuarial present value of non-vested accumulated plan benefits	<u>3,826,094</u>	<u>3,924,080</u>
Total actuarial present value of accumulated plan benefits (PVAB)	<u>\$511,694,718</u>	<u>\$519,293,175</u>
Actuarial Value of Assets (AVA)	\$152,185,281	\$137,889,959
Market Value of Assets (MVA)	\$155,112,000	\$139,396,000
Funded Ratios (PVVB):		
• AVA as a percentage of present value of vested accumulated benefits	29.97%	26.76%
• MVA as a percentage of present value of vested accumulated benefits	30.54%	27.05%
Funded Ratios (PVAB):		
• AVA as a percentage of present value of accumulated benefits	29.74%	26.55%
• MVA as a percentage of present value of accumulated benefits	30.31%	26.84%

Note: The amounts stated as vested benefits include employee contribution accounts, which are considered 100% vested.

The factors that affected the change in the actuarial present value of accumulated plan benefits from the preceding to the current benefit information date are as follows:

Factors	Change in Actuarial Present Value of Accumulated Plan Benefits
Benefits accumulated, net experience gain or loss, changes in data	\$9,339,329
Benefits paid	-52,677,000
Interest	<u>35,739,214</u>
Total	<u>-\$7,598,457</u>

State Minimum Requirements

Under Georgia minimum funding requirements, liability may be amortized as a percent of payroll, rather than a fixed dollar amount. In general, with fixed dollar amortization, actual experience close to the assumptions will result in a total contribution requirement (the normal cost plus the payment on the unfunded actuarial liability) that decreases over time as a percentage of payroll. With percentage of payroll amortization, given expected experience, the total contribution requirement should remain level as a percentage of payroll if the aggregate payroll increases as assumed.

The Board has adopted a policy for amortizing the unfunded actuarial liability, and the amortization period is 8.5 years for FY 2020. The contributions determined under this method continue to meet the Georgia minimum funding requirements by virtue of Georgia Code Section 47-20-10(b).

Section 3: Supplemental Information

EXHIBIT A – TABLE OF PLAN COVERAGE

Category	Year Ended June 30		Change From Prior Year
	2018	2017

11. Market value of assets as of July 1, 2018: (1) + (9) + (10)	\$1,300,987,000	\$155,112,000	\$1,456,099,000

EXHIBIT F – DEVELOPMENT OF THE FUND THROUGH JUNE 30, 2018

Year Ended June 30	Employer Contributions	Employee Contributions	Net Investment Return ¹	Admin. Expenses	Benefit Payments	Market Value of Assets at Year-End	Actuarial Value of Assets at Year-End	Actuarial Value as a Percent of Market Value
2009	\$42,005,043	\$2,544,188	-\$11,589,873	\$0	\$54,740,338	\$101,315,675 ²	\$112,295,208	110.84%
2010	45,500,000	2,478,458	10,809,475	0	54,530,318	105,573,290	114,615,676	108.57%
2011	39,000,000 ³	1,971,000	35,373,710 ⁴	0	56,276,000	125,642,000	113,553,224	90.38%
2012	39,000,000	1,841,000	624,000	0	56,824,000	110,283,000	101,272,560	91.83%
2013	43,013,000	1,689,000	17,035,000	0	56,511,000	115,509,000	115,509,000	100.00%
2014	48,000,000	1,554,000	20,355,000	0	56,063,000	129,355,000	119,806,270	92.62%
2015	48,905,000	1,684,000	6,247,000	0	55,058,000	131,133,000	126,601,083	96.54%
2016	50,400,000	1,663,000	5,143,000 ⁵	0	54,177,000	123,876,000	128,256,838	103.54%
2017	52,000,000	1,441,000	16,529,000	0	54,450,000	139,396,000	137,889,959	98.92%
2018	53,400,000	1,513,000	13,692,000 ⁶	212,000	52,677,000	155,112,000	152,185,281	98.11%

¹On a market basis, net of investment fees (and administrative fees prior to 2018)

²Includes a -\$37,407,319 correction by Auditor

³Changed from \$47,333,000 per School Board

⁴Includes \$8,333,000 asset adjustment

⁵Includes -\$5,706,000 asset adjustment

⁶Includes \$155,000 asset adjustment

EXHIBIT G – DEFINITION OF PENSION TERMS

The following list defines certain technical terms for the convenience of the reader:

Actuarial Accrued Liability for Actives:	The equivalent of the accumulated normal costs allocated to the years before the valuation date.
Actuarial Accrued Liability for Pensioners and Beneficiaries:	The single-sum value of lifetime benefits to existing pensioners and beneficiaries. This sum takes account of life expectancies appropriate to the ages of the annuitants and the interest that the sum is expected to earn before it is entirely paid out in benefits.
Actuarial Cost Method:	A procedure allocating the Actuarial Present Value of Future Benefits to various time periods; a method used to determine the Normal Cost and the Actuarial Accrued Liability that are used to determine the actuarially determined contribution.
Actuarial Gain or Loss:	A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two Actuarial Valuation dates. Through the actuarial assumptions, rates of decrements, rates of salary increases, and rates of fund earnings have been forecasted. To the extent that actual experience differs from that assumed, Actuarial Accrued Liabilities emerge which may be the same as forecasted, or may be larger or smaller than projected. Actuarial gains are due to favorable experience, e.g., assets earn more than projected, salary increases are less than assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, actuarial losses are the result of unfavorable experience, i.e., actual results yield in actuarial liabilities that are larger than projected. Actuarial gains will shorten the time required for funding of the actuarial balance sheet deficiency while actuarial losses will lengthen the funding period.
Actuarially Equivalent:	Of equal actuarial present value, determined as of a given date and based on a given set of Actuarial Assumptions.
Actuarial Present Value (APV):	<p>The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions. Each such amount or series of amounts is:</p> <p>Adjusted for the probable financial effect of certain intervening events (such as changes in compensation levels, marital status, etc.)</p> <p>Multiplied by the probability of the occurrence of an event (such as survival, death, disability, withdrawal, etc.) on which the payment is conditioned, and</p> <p>Discounted according to an assumed rate (or rates) of return to reflect the time value of money.</p>

Actuarial Present Value of Future Plan Benefits:	The Actuarial Present Value of benefit amounts expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age, anticipated future compensation, and future service credits. The Actuarial Present Value of Future Plan Benefits includes the liabilities for active members, retired members, beneficiaries receiving benefits, and inactive members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.
Actuarial Valuation:	The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB, such as the Actuarially Determined Contribution (ADC) and the Net Pension Liability (NPL).
Actuarial Value of Assets (AVA):	The value of the Fund's assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets, but commonly plans use a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the ADC.
Actuarially Determined:	Values that have been determined utilizing the principles of actuarial science. An actuarially determined value is derived by application of the appropriate actuarial assumptions to specified values determined by provisions of the law.
Actuarially Determined Contribution (ADC):	The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under the Plan's funding policy. The ADC consists of the Employer Normal Cost and the Amortization Payment.
Amortization Method:	A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization Payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the assumed rate at which total covered payroll of all active members will increase.
Amortization Payment:	The portion of the pension plan contribution, or ADC, that is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

Assumptions or Actuarial Assumptions:	The estimates upon which the cost of the Fund is calculated, including: <u>Investment return</u> - the rate of investment yield that the Fund will earn over the long-term future; <u>Mortality rates</u> - the death rates of employees and pensioners; life expectancy is based on these rates; <u>Retirement rates</u> - the rate or probability of retirement at a given age or service; <u>Disability rates</u> - the probability of disability retirement at a given age; <u>Withdrawal rates</u> - the rates at which employees of various ages are expected to leave employment for reasons other than death, disability, or retirement; <u>Salary increase rates</u> - the rates of salary increase due to inflation and productivity growth.
Closed Amortization Period:	A specific number of years that is counted down by one each year, and therefore declines to zero with the passage of time. For example, if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc. See Open Amortization Period.
Decrements:	Those causes/events due to which a member's status (active-inactive-retiree-beneficiary) changes, that is: death, retirement, disability, or withdrawal.
Defined Benefit Plan:	A retirement plan in which benefits are defined by a formula applied to the member's compensation and/or years of service.
Defined Contribution Plan:	A retirement plan, such as a 401(k) plan, a 403(b) plan, or a 457 plan, in which the contributions to the plan are assigned to an account for each member, the plan's earnings are allocated to each account, and each member's benefits are a direct function of the account balance.
Employer Normal Cost:	The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.
Experience Study:	A periodic review and analysis of the actual experience of the Fund that may lead to a revision of one or more actuarial assumptions. Actual rates of decrement and salary increases are compared to the actuarially assumed values and modified as deemed appropriate by the Actuary.
Funded Ratio:	The ratio of the actuarial value of assets (AVA) to the actuarial accrued liability (AAL). Plans sometimes calculate a market funded ratio, using the market value of assets (MVA), rather than the AVA.

GASB 67 and GASB 68:	Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68. These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 68 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67 sets the rules for the systems themselves.
Investment Return:	The rate of earnings of the Fund from its investments, including interest, dividends and capital gain and loss adjustments, computed as a percentage of the average value of the fund. For actuarial purposes, the investment return often reflects a smoothing of the capital gains and losses to avoid significant swings in the value of assets from one year to the next.
Net Pension Liability (NPL):	The Net Pension Liability is equal to the Total Pension Liability minus the Plan Fiduciary Net Position.
Normal Cost:	That portion of the Actuarial Present Value of pension plan benefits and expenses allocated to a valuation year by the Actuarial Cost Method. Any payment in respect of an Unfunded Actuarial Accrued Liability is not part of Normal Cost (see Amortization Payment). For pension plan benefits that are provided in part by employee contributions, Normal Cost refers to the total of employee contributions and employer Normal Cost unless otherwise specifically stated.
Open Amortization Period:	An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. If the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period with level percentage of payroll is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never decrease, but will become smaller each year, in relation to covered payroll, if the actuarial assumptions are realized.
Plan Fiduciary Net Position:	Market value of assets.
Total Pension Liability (TPL):	The actuarial accrued liability under the entry age normal cost method and based on the blended discount rate as described in GASB 67 and 68.
Unfunded Actuarial Accrued Liability:	The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets. This value may be negative, in which case it may be expressed as a negative Unfunded Actuarial Accrued Liability, also called the Funding Surplus.
Valuation Date or Actuarial Valuation Date:	The date as of which the value of assets is determined and as of which the Actuarial Present Value of Future Plan Benefits is determined. The expected benefits to be paid in the future are discounted to this date.

Section 4: Actuarial Valuation Basis

EXHIBIT I – ACTUARIAL ASSUMPTIONS AND ACTUARIAL COST METHOD

Rationale for Assumptions:	The information and analysis used in selecting each assumption that has a significant effect on this actuarial valuation is shown in the Review of Actuarial Experience for the five year period ended June 30, 2016 dated June 7, 2017.	
Net Investment Return:	7.25%, the investment return rate is assumed to be net of investment expenses. The net investment return assumption was chosen by the Pension Fund's Board of Trustees, with input from the actuary. This assumption is a long-term estimate derived from historical data, current and recent market expectations, and professional judgment. As part of the analysis, a building block approach was used that reflects inflation expectations and anticipated risk premiums for each of the portfolio's asset classes, as well as the Fund's target asset allocation.	
Administrative Expenses:	\$200,000 per year, projected annually with 2.25% inflation. As of July 1, 2018, the assumed annual expense is \$204,500. The annual administrative expenses were based on historical and current data and adjusted to reflect estimated future experience and professional judgment.	
Salary Increases:	Age	Rate (%)
	Under 25	14.75
	25 - 29	11.75
	30 - 34	8.75
	35 - 39	6.75
	40 - 44	5.75
	45 - 49	5.00
	50 - 54	4.25
	55 - 59	3.75
	60 - 64	3.25
	65 & over	3.00
	<i>Salary increases include an assumed inflation rate of 2.25% and 0.75% productivity.</i>	
Vacation Pay Adjustment:	Retirement benefits are increased by 4% to reflect vacation pay.	

Payroll Growth:	3.00%, compounded annually																																																					
Cost-of-Living Adjustments:	2.25%, compounded annually																																																					
Mortality Rates:																																																						
<i>Pre-retirement:</i>	Approximate RP-2006 Blue Collar Employee Table, loaded by 25% with sex-distinct rates and projected generationally with scale SSA2016-2D																																																					
<i>Healthy annuitants:</i>	Approximate RP-2006 Blue Collar Healthy Annuitant Table, loaded by 25% with sex-distinct rates and projected generationally with scale SSA2016-2D																																																					
<i>Disabled annuitants:</i>	Approximate RP-2006 Disabled Retiree Mortality Table, loaded by 25% with sex-distinct rates and projected generationally with scale SSA2016-2D																																																					
	Based on a five-year experience study for the period ended June 30, 2016, the above tables reasonably reflect the mortality experience of the Fund. The mortality tables are adjusted to future years using generational projection under scale SSA2016-2D to reflect expected mortality improvement.																																																					
Annuitant Mortality Rates:	<table border="1"> <thead> <tr> <th rowspan="3">Age</th> <th colspan="4">Rate (%)</th> </tr> <tr> <th colspan="2">Healthy*</th> <th colspan="2">Disabled*</th> </tr> <tr> <th>Male</th> <th>Female</th> <th>Male</th> <th>Female</th> </tr> </thead> <tbody> <tr> <td>55</td> <td>0.80</td> <td>0.52</td> <td>3.11</td> <td>1.88</td> </tr> <tr> <td>60</td> <td>1.12</td> <td>0.82</td> <td>3.51</td> <td>2.43</td> </tr> <tr> <td>65</td> <td>1.81</td> <td>1.32</td> <td>4.54</td> <td>3.16</td> </tr> <tr> <td>70</td> <td>2.98</td> <td>2.12</td> <td>6.10</td> <td>4.28</td> </tr> <tr> <td>75</td> <td>4.86</td> <td>3.44</td> <td>8.38</td> <td>6.14</td> </tr> <tr> <td>80</td> <td>7.98</td> <td>5.67</td> <td>11.78</td> <td>9.07</td> </tr> <tr> <td>85</td> <td>13.13</td> <td>9.75</td> <td>17.14</td> <td>13.56</td> </tr> <tr> <td>90</td> <td>21.64</td> <td>16.72</td> <td>25.57</td> <td>19.83</td> </tr> </tbody> </table> <p><i>*Rates shown do not include generational projection</i></p>	Age	Rate (%)				Healthy*		Disabled*		Male	Female	Male	Female	55	0.80	0.52	3.11	1.88	60	1.12	0.82	3.51	2.43	65	1.81	1.32	4.54	3.16	70	2.98	2.12	6.10	4.28	75	4.86	3.44	8.38	6.14	80	7.98	5.67	11.78	9.07	85	13.13	9.75	17.14	13.56	90	21.64	16.72	25.57	19.83

	Mortality ¹		Ordinary Disability ²		Withdrawal ³
	Male	Female	Male	Female	All Lives
20	0.08	0.03	0.01	0.03	18.00
25	0.09	0.03	0.02	0.04	18.00
30	0.08	0.03	0.02	0.07	12.00
35	0.09	0.04	0.03	0.12	10.00
40	0.12	0.07	0.04	0.17	8.50
45	0.20	0.11	0.07	0.26	8.00
50	0.32	0.16	0.12	0.41	0.00
55	0.48	0.24	0.20	0.69	0.00
60	0.80	0.39	0.31	0.84	0.00

¹Rates shown do not include generational projection

²Occupational disability rates are 10% of the ordinary disability rates

³Withdrawal rates do not apply at or beyond the later of age 50 and 5 years of service

Retirement Rates:

Less than 30 Years of Service		30 or More Years of Service	
Age	Rate	Age	Rate
50-52	2%	50-52	15%
53-54	3	53-54	15
55-59	5	55-59	20
60	20	60	35
61	15	61	20
62	20	62	20
63-64	15	63-64	20
65-69	25	65-69	20
70 & over	100	70 & over	100

The retirement rates were based on historical and current demographic data, adjusted to reflect estimated future experience and professional judgment. As part of the analysis, a comparison was made between the actual number of retirements by age and the projected number based on the prior year's assumption over the five-year period ended June 30, 2016.

Retirement Age for Vested Inactive Participants:	Age 65 for participants in vested inactive status as of the valuation date; age 60 for active participants assumed to terminate prior to retirement eligibility.
Unknown Data for Participants:	There were no records that were missing both service amounts and dates of hire. For participants with less than one year of benefit service, salaries were annualized.
Weighted Average Retirement Age:	Age 62.3, determined as follows: The weighted average retirement age for each participant is calculated as the sum of the product of each potential current or future retirement age times the probability of surviving from current age to that age and then retiring at that age, assuming no other decrements. The overall weighted retirement age is the average of the individual retirement ages based on all the active participants included in the July 1, 2018 actuarial valuation.
Percent Married:	75%
Age of Spouse:	Females are assumed to be three years younger than their male spouses.
Refunds of Employee Contributions for Terminated Vested Participants	50% of participants elect a refund of their employee contribution balances.
Actuarial Value of Assets:	Market value of assets less unrecognized returns in each of the last five years. Unrecognized return is equal to the difference between the actual market return and the expected return on the market value, and is recognized over a five-year period, further adjusted, if necessary, to be within 20% of the market value.
Actuarial Cost Method:	Entry Age Actuarial Cost Method. Entry Age is current age minus years of service. Normal Cost and Actuarial Accrued Liability are calculated on an individual basis and are allocated by salary.
Assumption Changes:	There have been no changes in actuarial assumptions or methods since the last valuation.

EXHIBIT II – SUMMARY OF PLAN PROVISIONS

This exhibit summarizes the major provisions of the City of Atlanta General Employees' Pension Fund Employees of the Atlanta Board of Education included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

Plan Year:	July 1 through June 30
Plan Status:	Ongoing
Normal Retirement:	
<i>Eligibility</i>	A participant may retire at age 60 after completing 10 years of service.
<i>Monthly Amount</i>	2.5% of average monthly salary for each year of credited service. This amount cannot be less than \$17 per month for each year of service, and is capped at 80% of average monthly salary. Average monthly salary is defined as the highest average monthly base compensation over any 36-month period.
<i>Normal Form of Payment</i>	75% joint and survivor annuity (no reduction in benefit for providing survivor coverage)
Early Retirement:	
<i>Service Requirement</i>	10 years credited service
<i>Monthly Amount</i>	Normal pension monthly amount reduced by 1/2 of 1% per month for the first 60 months and by 1/4 of 1% per month for the remaining months by which age at retirement is less than 60. More favorable early retirement adjustments may apply to participants in prior plans. Unreduced early retirement is available with 30 years of credited service.
Disability:	
<i>Service Requirement</i>	5 years credited service for non-job-related disability. None for job-related disability.
<i>Monthly Amount</i>	Normal pension based on service accrued and final average salary at disability, payable immediately; cannot be less than 50% of average monthly salary. This amount is payable until attainment of normal retirement age at which time the benefit is recalculated to value years while disabled as years of service.

Vesting:	<p>An employee who terminates employment may receive a percentage of his accrued benefit payable at age 60 as determined below:</p> <table border="1" data-bbox="898 256 1675 597"> <thead> <tr> <th data-bbox="898 256 1360 305">Completed Years of Service</th> <th data-bbox="1360 256 1675 305">Percentage Vesting</th> </tr> </thead> <tbody> <tr> <td data-bbox="898 305 1360 345">Less than 5</td> <td data-bbox="1360 305 1675 345">0%</td> </tr> <tr> <td data-bbox="898 345 1360 386">5</td> <td data-bbox="1360 345 1675 386">25</td> </tr> <tr> <td data-bbox="898 386 1360 427">6</td> <td data-bbox="1360 386 1675 427">30</td> </tr> <tr> <td data-bbox="898 427 1360 467">7</td> <td data-bbox="1360 427 1675 467">35</td> </tr> <tr> <td data-bbox="898 467 1360 508">8</td> <td data-bbox="1360 467 1675 508">40</td> </tr> <tr> <td data-bbox="898 508 1360 548">9</td> <td data-bbox="1360 508 1675 548">45</td> </tr> <tr> <td data-bbox="898 548 1360 597">10 or more</td> <td data-bbox="1360 548 1675 597">100</td> </tr> </tbody> </table> <p data-bbox="898 605 1732 638"><i>Note: A participant is always 100% vested in his/her contributions to the Fund.</i></p>	Completed Years of Service	Percentage Vesting	Less than 5	0%	5	25	6	30	7	35	8	40	9	45	10 or more	100
Completed Years of Service	Percentage Vesting																
Less than 5	0%																
5	25																
6	30																
7	35																
8	40																
9	45																
10 or more	100																
Termination:	A participant terminating employment may elect a refund of their own contributions with interest. A refund will cause the forfeiture of any other vested accrued benefit from the Plan.																
Death Benefits:	<p>If a participant dies prior to his attainment of eligibility for retirement, a lump sum of his own contributions with interest is payable to his beneficiary or estate.</p> <p>If an active participant who is eligible to retire, or a retired participant, dies, 75% of the accrued pension benefit is payable to the beneficiary. Eligible beneficiaries are the spouse or unmarried children under 23 (18 if not in post-secondary school). If the spouse is more than five years younger than the participant, the amount payable is reduced by 2% per year by which the spouse is younger.</p>																
Credited Service:	Service is credited for employment as an employee of the Atlanta Board of Education or as a general employee of the City of Atlanta. Additional credit is granted for accumulated sick leave and for other prior service as specified in the plan.																
Participation:	All employees of the Atlanta Board of Education who are not covered by the Georgia Teachers' Retirement System or the Employees' Retirement System of Georgia.																
Employee Contributions:	<table border="1" data-bbox="793 1125 1785 1278"> <thead> <tr> <th data-bbox="793 1125 1528 1166">Employee</th> <th data-bbox="1528 1125 1785 1166">% of Base Salary</th> </tr> </thead> <tbody> <tr> <td data-bbox="793 1166 1528 1206">Unmarried employees without beneficiaries</td> <td data-bbox="1528 1166 1785 1206">7%</td> </tr> <tr> <td data-bbox="793 1206 1528 1247">Unmarried employees with beneficiaries</td> <td data-bbox="1528 1206 1785 1247">8%</td> </tr> <tr> <td data-bbox="793 1247 1528 1278">Married employees</td> <td data-bbox="1528 1247 1785 1278">8%</td> </tr> </tbody> </table>	Employee	% of Base Salary	Unmarried employees without beneficiaries	7%	Unmarried employees with beneficiaries	8%	Married employees	8%								
Employee	% of Base Salary																
Unmarried employees without beneficiaries	7%																
Unmarried employees with beneficiaries	8%																
Married employees	8%																

Interest on Employee Contributions:	Employee contributions earn 5% interest each year.
Cost-of-Living Provision:	Benefits are adjusted annually on January 1 of each year based on the change in the Consumer Price Index from November 1 through October 31 of the preceding year. Such annual adjustment cannot exceed 3%.
Changes in Plan Provisions:	There have been no changes in plan provisions since the last valuation.
