Retirement Board
Public Employee Retirement System
State of Idaho
State House
Boise, ID 83720

Dear Members of the Board:

In accordance with your request, we have performed an actuarial valuation of the Public Employee Retirement System of Idaho for determining the System's financial status as of July 1, 2014. The major findings of the valuation are contained in this report, including discussion regarding the impact of the 2.30% Restoration of Purchasing Power COLA, the cancellation of future contribution rate increases and the 0.70% discretionary March 1, 2015 COLA. Results within this report reflect these plan changes. Aside from these changes, this report reflects the benefit provisions and contribution rates in effect as of July 1, 2014.

Certification

In preparing this letter, we relied, without audit, on information (some oral and some in writing) supplied by PERSI's staff. This information includes, but is not limited to, statutory provisions, member census data, and financial information. We found this information to be reasonably consistent and comparable with data used for other purposes. The valuation results depend on the integrity of this information. If any of this information is inaccurate or incomplete our results may be different and our calculations may need to be revised.

All costs, liabilities, rates of interest, and other factors for the System have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the System and reasonable expectations); and which, in combination, offer our best estimate of anticipated experience affecting the System. Further, in our opinion, each actuarial assumption used is reasonably related to the experience of the System and to reasonable expectations which, in combination, represent our best estimate of anticipated experience under the System.

This valuation report is only an estimate of the System's financial condition as of a single date. It can neither predict the System's future condition nor guarantee future financial soundness. Actuarial valuations do not affect the ultimate cost of System benefits, only the timing of System contributions. While the valuation is based on an array of individually reasonable assumptions, other assumption sets may also be reasonable and valuation results based on those assumptions would be different. No one set of assumptions is uniquely correct. Determining results using alternative assumptions is outside the scope of our engagement.

This work product was prepared solely for PERSI for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work. Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not perform an analysis of the potential range of future measurements. The Retirement Board has the final decision regarding the appropriateness of the assumptions and actuarial cost methods.

Actuarial computations presented in this report are for purposes of determining the recommended funding amounts for the System. The calculations in the enclosed exhibits have been made on a basis consistent with our understanding of the System's funding requirements and goals. Determinations for purposes other than meeting this requirement may be significantly different from the results contained in this letter. Accordingly, additional determinations may be needed for other purposes.

Milliman's work is prepared solely for the internal business use of the System. To the extent that Milliman's work is not subject to disclosure under applicable public records laws, Milliman's work may not be provided to third parties without Milliman's prior written consent. Milliman does not intend to benefit or create a legal duty to any third party recipient of its work product. Milliman's consent to release its work product to any third party may be conditioned on the third party signing a Release, subject to the following exception(s):

- (a) The System may provide a copy of Milliman's work, in its entirety, to the System's professional service advisors who are subject to a duty of confidentiality and who agree to not use Milliman's work for any purpose other than to benefit the System.
- (b) The System may provide a copy of Milliman's work, in its entirety, to other governmental entities, as required by law.

No third party recipient of Milliman's work product should rely upon Milliman's work product. Such recipients should engage qualified professionals for advice appropriate to their own specific needs.

The consultants who worked on this assignment are pension actuaries. Milliman's advice is not intended to be a substitute for qualified legal or accounting counsel.

The signing actuaries are independent of the plan sponsor. We are not aware of any relationship that would impair the objectivity of our work.

On the basis of the foregoing, we hereby certify that, to the best of our knowledge and belief, this letter is complete and accurate and has been prepared in accordance with generally recognized and accepted actuarial principles and practices. We are members of the American Academy of Actuaries and Fellows of the Society of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

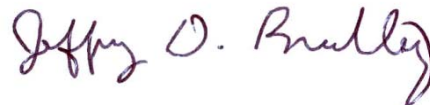

We would like to express our appreciation to Don Drum, Executive Director of the System, and to members of his staff, who gave substantial assistance in supplying the data on which this report is based.

We respectfully submit the following report and we look forward to discussing it with you.

Sincerely,

Robert L. Schmidt, FSA, EA, MAAA

Public Employee Retirement System of Idaho

Section 1: Summary of the Findings

Our actuarial valuation of the System as of July 1, 2014 shows that the current scheduled contribution rates will meet the normal costs of the System as they accrue. The current scheduled rates are sufficient to amortize the Unfunded Actuarial Accrued Liability (UAAL) in 25 or fewer years. Therefore, the amortization period is less than the 25-year maximum permitted under Section 59-1322, Idaho Code.

Specifically, based on the current blended contribution rate of 18.39% of pay, including the March 1, 2015 discretionary COLA and Restoration of Purchasing Power (ROPP) COLA, and removing the once scheduled future rate increases, the UAAL is projected to be amortized over 11.6 years if future experience matches the actuarial assumptions.

One measure of the adequacy of the contribution rates is the funding ratio, which compares the value of the actuarial assets to the actuarial accrued liability. The following compares the 2013 and the 2014 valuations.

Including Effect of :	Funding Ratio	
	2013	2014
COLA commencing		
March 1, 2013	85.3%	
March 1, 2014	85.3%	93.9%
March 1, 2015		92.9%

The funding ratio reflects the current value of the assets. For the 2013 valuation, the table reflects that there was no discretionary COLA granted at March 1, 2014.

The cancelled future contribution rate increases are reflected in the 2014 funding ratios. For the 2014 valuation, the table shows the funding ratio with the granted discretionary COLA effective March 1, 2015.

Summary of the Findings (continued)

The calculations in this report assume a 1.0% automatic COLA in all future years. The impact of the March 1, 2015 discretionary COLA is included in this report in all final 2014 values, except where noted for comparison. The calculations do not reflect any discretionary COLAs that may be granted beyond March 1, 2015. While the Board has granted discretionary COLAs in the past, the decision whether or not to grant each COLA is made one year at a time. If the COLA assumption used for the actuarial valuation included provision for potential future discretionary COLAs, the impact would be a material increase in the costs and liabilities reported herein.

The 2014 actuarial valuation indicates that an actuarial experience gain of \$1,269.2 million occurred during the fiscal year that just ended. This gain is based on the expected UAAL (Funding Reserve) as of July 1, 2014 of \$2,172.6 million versus the actual UAAL of \$903.4 million, before accounting for the discretionary COLA and cancelled rate increases. The gain was primarily due to investment gains, as reflected in the 16.77% investment yield for the past year. The effect of the gain can be distributed as shown in Table 1.

Table 2 illustrates the gains and losses incurred in the last three fiscal years attributable to both expected and unexpected experience, as well as changes in assumptions, benefits and methods.

**Change in Assumptions,
Benefits or Contribution
Rates**

At its May 2014 meeting, the Board adopted new mortality assumptions, as recommended by Milliman as part of our 2014 Investigation of Experience.

The assumptions changes are:

- The setback for General Male mortality was changed from zero years to one year.
- The set forward for Disabled Female mortality was changed from two years to one year.

In the September 2014 Board meeting, the Board approved the 0.7% discretionary COLA and a Retroactive COLA of 2.3% effective March, 1, 2015.

During the September 2014 Board meeting, all future contribution rate increases were also cancelled by the Board.

All of these changes are reflected in this report.

There have been no other changes in actuarial assumptions or plan benefits since the July 1, 2013 valuation.

Discretionary COLAs

The System automatically provides a 1% increase in retirement benefits each year if the Consumer Price Index (CPI) has increased by at least that amount. The Board is empowered to go beyond 1% and match the full increase in the CPI, up to a total of 6%, subject to rejection or amendment by the Legislature. If the increase is less than 1%, or negative, the COLA is automatic. A negative COLA cannot decrease benefits by more than 6% in one year, and each retiree's benefit cannot be less than the amount of the retirement allowance at the member's commencement date.

The CPI grew at a rate of 1.70% during the last year. As the Board has already approved a discretionary COLA of 3.0% (CPI greater than 1.0% + 2.3% ROPP), the effect of the additional benefit increase is reflected in the balance of this report, except as noted. The increase in actuarial liabilities due to the additional 3.0% granted discretionary increase is \$159.2 million as of July 1, 2014.

Table 2: Analysis of Actuarial Gains and Losses
(All Dollar Amounts in Millions)

	<u>Gain (Loss) for Period</u>		
	<u>2011-2012</u>	<u>2012-2013</u>	<u>2013-2014</u>
Investment Income			
Investment income was greater (less) than expected	(669.0)	179.8	1,146.6
Pay Increases			
Pay increases were less (greater) than expected	171.3	49.4	155.9
Membership Growth			
(Additional) liability for new members	(8.1)	(15.2)	(16.9)
Return to Employment			
Less (more) reserves were required for terminated members returning to work	(10.5)	(9.9)	(10.7)
Death After Retirement			
Retirees died younger (lived longer) than expected	(9.2)	(6.9)	(10.2)
Cost of Living Adjustment (COLA)			
Different automatic COLA than expected	NA	NA	NA
Other			
Miscellaneous gains (and losses) resulting from other causes ⁽¹⁾	<u>7.1</u>	<u>(14.0)</u>	<u>(15.9)</u>
Total Gain (Loss) During the Period From Actuarial Experience	(518.4)	183.2	1,269.2
Contribution Income			
Actual contributions were greater (less) than the normal cost and interest on the Unfunded Actuarial Accrued Liability	(31.5)	(70.3)	(23.6)
Non-Recurring Items			
Changes in actuarial assumptions caused a gain (loss) ⁽²⁾	(255.0)	None	(76.2)
Changes in actuarial methods caused a gain (loss) ⁽³⁾	None	(143.5)	None
Changes in plan provisions caused a gain (loss) ⁽⁴⁾	None	None	(159.2)
Changes to Contribution Rate Increase Schedule	<u>(6.0)</u>	<u>0.0</u>	<u>11.6</u>
Composite Gain (Loss) During the Period	(810.9)	(30.6)	1,021.8

Note: Numerical results are expressed as a decrease increase) in the actuarial accrued liability.

(1) Reflects losses on active and inactive member experience.

(2) For 2011-2012, this reflects changes made to the demographic and economic assumptions adopted according to the 2012 Active Member Experience Study. For 2013-2014, this reflects changes made to the mortality assumptions adopted according to the 2014 Experience Study.

(3) For 2012-2013, this reflects the change from Aggregate Entry Age Cost Method to Individual Entry Age Cost Method

(4) For 2014 this reflects the 0.70% discretionary and 2.30% retroactive COLA, effective March 1, 2015.

6. Funded Status (<i>\$Millions</i>)			
A. Funding Reserve (Unfunded Actuarial Accrued Liability, UAAL) (<i>5A – 4F</i>)	\$(2,074.1)	\$(1,052.3)	
B. Funded Ratio (<i>5A ÷ 4F</i>)	85.3%	92.9%	
7. Contribution Rates (<i>percent of salaries</i>)			
A. Current Total Blended Contribution Rate	18.39%	18.39%	
B. Total Normal Cost Rate	<u>14.19%</u>	<u>14.34%</u>	
C. Contribution Rate Minus Normal Cost Rate (<i>7A – 7B</i>)	4.20%	4.05%	
D. Ultimate Total Blended Contribution Rate ⁽³⁾	22.17%	18.39%	
E. Amortization Period for UAAL Based on Currently Scheduled Contribution Rates ⁽³⁾	13.1 years	11.6 years	

(1) Final results reflecting all COLA's adopted in prior year.

(2) Final results reflecting 3.0% discretionary COLA and cancellation of all future rate increases.

(3) The Board cancelled all future rate increases. These cancellations were not incorporated in the 2013 Actuarial Valuation but have been included in the 2014 Actuarial Valuation.

Contribution Rates

In November 2002, the Board approved three 1% contribution rate increases to take effect on July 1, 2004, July 1, 2005, and July 1, 2006. The total rate increase of 1% each year is split between the employer and employee contributions.

Due to the 17.63% investment return in the year ending June 30, 2004, in November 2004, the Board delayed the scheduled contribution rate increases for July 1, 2005 and July 1, 2006 to July 1, 2006 and July 1, 2007 respectively.

Due to the 10.34% investment return in the year ending June 30, 2005, in the fall of 2005, the Board delayed the contribution rate increases again, to July 1, 2007 and July 1, 2008.

Due to the 11.79% investment return in the year ending June 30, 2006, in the fall of 2006, the Board delayed the contribution rate increases again, to July 1, 2008 and July 1, 2009.

Due to continued improvements in the funded status, including exceeding a 100% funded ratio by July 1, 2007, the Board cancelled the contribution rate increases in the fall of 2007.

In December 2009, due to a significant drop in funded status because of investment losses in the year ending June 30, 2009, the Board approved three contribution rate increases: 1.5% at July 1, 2011, 1.5% at July 1, 2012, and 2.28% at July 1, 2013.

Due to the 12.01% investment return in the year ending June 30, 2010, in December 2010, the Board delayed the scheduled contribution rate increases for July 1, 2011, July 1, 2012, and July 1, 2013, to July 1, 2012, July 1, 2013, and July 1, 2014, respectively.

Due to the 20.25% investment return in the year ending June 30, 2011, in December 2011, the Board delayed the scheduled contribution rate increases for July 1, 2012, July 1, 2013, and July 1, 2014, to July 1, 2013, July 1, 2014, and July 1, 2015, respectively.

On July 1, 2013, the first of three scheduled contribution rate increases went into effect. The total rate increase of 1.5% is split between the employer and employee contributions.

In October 2013 the Board delayed the scheduled contribution rate increases for July 1, 2014 and July 1, 2015, to July 1, 2015 and July 1, 2016, respectively.

Due to the 16.77% investment return in the year ending June 30, 2014, in September 2014 the Board cancelled the contribution rate increases scheduled for July 1, 2015 and July 1, 2016. The current contribution rates are sufficient to amortize the UAAL in 11.6 years. This meets the 25-year amortization period limit required under Section 59-1322, Idaho Code.

Gain Sharing

Beginning in 2000, under Section 59-1309, Idaho Code, the Board may allocate all or a portion of “extraordinary gains” to active and retired members and employers as Gain Sharing. Extraordinary gains are defined as the excess, if any, at the close of the fiscal year of the Assets over Actuarial Accrued Liabilities plus an amount necessary to absorb a one standard deviation market event without increasing contribution rates, as determined by the Board. Under the Board’s current investment policy, assets in excess of a 113% funded ratio are considered extraordinary gains. Therefore, no assets are available for gain sharing as of July 1, 2014.

Public Employee Retirement System of Idaho

Section 2: Scope of the Report

This report presents the actuarial valuation of the Public Employee Retirement System of Idaho as of July 1, 2014. This valuation was requested by the System's Board.

Your particular attention is called for in reading our cover letter, where we refer to the guidelines employed in the preparation of this report. We also comment on the sources and reliability of both the data and the actuarial assumptions upon which our findings depend. Those comments are the basis for our certification that this report is complete and accurate to the best of our knowledge and belief.

A summary of the findings resulting from this valuation is presented in the previous section. Section 3 describes the assets and investment experience of the System. Sections 4 and 5 describe how the obligations of the System are to be met under the actuarial cost method in use. In compliance with the new Statement No. 67 of the Governmental Accounting Standards Board (GASB), the information that was contained in Section 6 of prior years' reports will now be provided in a separate accounting valuation report, which will disclose the information required. Section 6 of this report (formerly Section 7) shows the estimated cash flow of future retirement benefit payments, based on the actuarial assumptions and a distribution of retired members by year of retirement.

This report includes several appendices:

- Appendix A A summary of the actuarial procedures and assumptions.
- Appendix B A summary of the current benefit structure based on governing law on July 1, 2014.
- Appendix C Schedules of valuation data classified by various categories; a brief summary of the System's recent experience; and comparative statistics since June 30, 1968.
- Appendix D A glossary of actuarial terms used in this report.

Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

Public Employee Retirement System of Idaho

Section 3: Assets

In many respects, an actuarial valuation can be thought of as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is July 1, 2014. On that date, the assets available for the payment of benefits are appraised. These assets are compared with the actuarial liabilities, which are generally well in excess of the assets. The actuarial process thus leads to a method of determining what contributions by members and their employers are needed to strike a balance.

This section of the report deals with the asset determination. In the next section, the actuarial liabilities will be discussed. Section 5 deals with the process for determining required contributions based on the relationship between the assets and actuarial liabilities.

Total Actuarial Assets

For all years shown in this table, the actuarial value of assets has been equal to the Market Value of Assets on the valuation date.

At July 1, 2014, the actuarial value of assets was \$14.217 billion. Table 4 presents a summary of the System's assets, and Table 5 presents an analysis of the investments.

The actuarial value of total assets has increased 95% over the value in 2000. The chart on the previous page illustrates this growth.

Tables 4 through 7 are derived from data furnished to us by the Retirement System. We have accepted these tables for use in this report without audit, but we have reviewed them for reasonableness and consistency with previous reports.

The net assets at June 30, 2014, of \$14,217,115,797 shown in Tables 4 and 6 include assets used in plan operations and assets held for the Firefighters' Retirement Fund and the Idaho Falls Policemen's Retirement Fund. The allocation of the fund is shown at the bottom of Table 4.

The yield rates shown at the top of Table 7 on both a market and an actuarial valuation basis are net of investment expenses, but not net of administrative expenses. The summary at the bottom of Table 7 shows the annual yields before expenses, net of investment expenses, and net of both investment and administrative expenses. Each yield should be compared with the appropriate actuarial assumption shown in the left column. The yield on the actuarial valuation basis, net of all expenses, is 16.71% for the year ending June 30, 2014, which is compared with the actuarial assumption, net of all expenses, of 7.00% for the fiscal year ended June 30, 2014.

Public Employee Retirement System of Idaho

Section 4: Actuarial Liabilities

In the previous section, an actuarial valuation was compared with an inventory process, and an analysis was given of the inventory of assets of the System as of the valuation date, July 1, 2014. In this section, the discussion will focus on the commitments of the System which are referred to as its actuarial liabilities.

Table 9 contains an analysis of the actuarial present value of all future benefits for contributing members and for former contributing members and their survivors. The analysis is given by type of benefit, by gender, and by class of membership.

The actuarial liabilities summarized in Table 9 include the actuarial present value of all future benefits expected to be paid with respect to each member. For an active member, this value includes measures of both benefits already earned and future benefits to be earned. For all members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and, if an optional benefit is chosen, for the lives of the surviving beneficiaries.

The actuarial assumptions are based on the results of the 2014 Active Member Experience Study. New mortality assumptions were adopted by the Board effective July 1, 2014.

Effective July 1, 2013, the Board adopted a change in the actuarial cost method from an aggregate entry age to an individual entry age calculation.

In September 2014 the Board granted a 2.30% Restoration of Purchasing Power (ROPP) COLA, cancelled future contribution rate increases and granted a 0.70% discretionary COLA. Liabilities within this report reflect these plan changes (except as noted). Aside from these changes, all liabilities reflect the benefits in effect as of July 1, 2014. No future increases are considered in determining the liabilities shown.

**Public Employee Retirement
System of Idaho**

Table 9: Actuarial Present Value of Future Benefits for Contributing Members and Former Contributing Members and Their Survivors

(All amounts in millions)

July 1, 2014

Contributing Members	Fire & Police	General Employees		Teachers		Grand Total
		Male	Female	Male	Female

(1) Including all benefits provided by voluntary contributions and the cancellation of all future rate increases.

(2) Includes granted discretionary March 1, 2015 COLA of 0.70% and the March 1, 2015 ROPP of 2.30%.

Public Employee Retirement System of Idaho

Section 5: Employer Contributions

The previous two sections were devoted to a discussion of the assets and actuarial liabilities of the System. Comparison of Tables 4 and 9 indicates that current assets fall short of meeting the actuarial liabilities. This is expected in all but a fully closed down fund, where no further contributions of any sort are anticipated.

In an active system, there will always be a difference between the actuarial assets and liabilities. This difference has to be made up out of future contributions and investment returns. An actuarial valuation method sets out a schedule of future contributions that will deal with this difference in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. For this valuation, the individual entry age actuarial cost method has been used. Under this method — or essentially any actuarial cost method — the contributions required to meet the difference between current assets and current actuarial liabilities are allocated each year between two elements:

- A normal cost amount, which ideally is relatively stable as a percentage of salary over the years; and
- Whatever amount is left over, which is used to amortize what is called the unfunded actuarial accrued liability.

Normal Cost

The two items described above — the normal cost and unfunded actuarial accrued liability — are the keys to understanding the actuarial cost method.

The normal cost is the theoretical contribution rate that will meet the ongoing costs of a group of average new employees. Suppose that a group of new employees was covered under a separate fund from which all benefits and to which all contributions and associated investment returns were paid. Under the individual entry age actuarial cost method, the normal cost contribution rate is that level percentage of pay that would be exactly right to maintain this fund on a stable basis. If experience were to follow the actuarial assumptions precisely, the fund would be completely liquidated when the last payment to the last survivor of the group has been made.

**Normal Cost
(continued)**

We have determined the normal cost rates for the System separately by class of employee and by type of benefit. These rates are summarized in Table 11. The normal cost rates in Table 11 reflect the actuarial assumptions adopted by the Board effective July 1, 2014, the plan provisions effective July 1, 2014, and the July 1, 2014 total contribution rate of 18.39%.

**Unfunded Actuarial
Accrued Liability**

The term "fully funded" is often applied to a system in which contributions for everyone at the normal cost rate are sufficient to pay for the benefits of existing employees as well as for those of new employees. More often than not, systems are not fully funded, either because of past benefit improvements that have not been completely paid for or because of actuarial deficiencies that have occurred because experience has not been as favorable as anticipated. Under these circumstances, an unfunded actuarial accrued liability (UAAL) exists.

**Amortization of
UAAL or Funding
Reserve**

However, even if a system does not have a positive UAAL, a portion or all of the normal cost contribution payments will need to be continued in order to have sufficient funds to pay future benefits. The use of the term "fully funded" may imply no further contributions are required at all. Therefore, a better term is a "well-funded" plan. This occurs when the value of the assets exceeds the actuarial accrued liability and the difference is referred to in the PERSI funding policy as the Funding Reserve.

Table 10 shows how the UAAL or Funding Reserve was derived for the System. Line A shows the total actuarial liability for all future benefits. The portion of the future liability expected to be paid from future normal cost contributions, both employer and employee, is shown on Line B. The difference between lines A and B is the System's actuarial accrued liability as of the actuarial valuation date.

Amortization of UAAL or Funding Reserve (continued)

The UAAL at any date after establishment of a system is affected by any actuarial gains or losses arising when the actual experience of the system varies from the experience anticipated by the actuarial assumptions used in the valuations. To the extent actual experience, as it develops, differs from that expected according to the assumptions used, so also will the emerging costs differ from the estimated costs disclosed in this report.

ORP Contributions

Under Idaho Code 33-107A each institution participating in the optional retirement program (ORP) is required to pay an amount equal to 1.49% of salaries of their ORP participants to PERSI. This amount is to be paid until July 1, 2025. Likewise, under Idaho Code 33-107B each community college and post-secondary vocational education institution is required to pay an amount equal to 3.83% of salaries of their ORP participants to PERSI. This amount was to be paid until July 1, 2011, and has since expired. These payments from the ORP employers are in lieu of amortization payments and withdrawal contributions otherwise required under PERSI. Table 10 Line D shows the present value of these future ORP contributions. The difference between the future ORP contributions and the computed actuarial accrued liability is the portion of the actuarial accrued liability that is expected to be funded by PERSI assets and contributions.

Line F in Table 10 indicates the actuarial value of assets. The excess of the actuarial accrued liability for PERSI in Line E over the actuarial assets is the UAAL for PERSI as shown on Line G.

Funding Adequacy

A key consideration in determining the adequacy of the funding of the System is how the UAAL is being serviced. If the UAAL amount is positive, that is the actuarial accrued liability to be funded is greater than the assets, then the UAAL is amortized. Idaho law calls for the UAAL to be liquidated in no more than 25 years. Table C-5 (Appendix C) illustrates, for historical comparison purposes only, the contribution rates on a 30-year amortization basis through 1992 and the contribution rates on the 25-year amortization basis beginning in 1993.

**Funding Adequacy
(continued)**

From July 1, 1998 to July 1, 2000, there was no UAAL, and the actuarial value of the assets exceeded the value of the actuarial accrued liability to be funded by PERSI, resulting in a Funding Reserve. However, asset losses for the year ending July 1, 2001, resulted in the re-emergence of a UAAL. The UAAL also grew during the years ending July 1, 2002 and July 1, 2003, due to further asset losses. The UAAL decreased during the years ending July 1, 2004, July 1, 2005, and July 1, 2006, due to asset gains. During the year ending July 1, 2007, the asset gain resulted in a Funding Reserve. During the year ending July 1, 2008, the asset loss resulted in the re-emergence of a UAAL. The UAAL grew further during the year ending July 1, 2009, due to asset losses. The UAAL decreased during the years ending July 1, 2010, and July 1, 2011, due to asset gains. During the year ending July 1, 2012, the asset loss resulted in an increase to the UAAL. The UAAL again increased during the year ending June 30, 2013. The UAAL decreased during the year ending July 1, 2014 due primarily to asset gains. The dollar amount of the UAAL is \$1,052.3 after reflecting the adoption of the discretionary and ROPP March 1, 2015 COLA benefits and the cancellation of all future rate increases. The cancellation of future rate increases lowered the UAAL by \$10.3 million as of July 1, 2014.

**Discretionary COLA
Increases**

The costs of providing future postretirement increases of 1% per year are included in the "Pre-Adjustments" amounts shown in Table 10. These increases are automatic as long as the increase in the CPI-U is at least 1%. The Board may, subject to modification or rejection by the Legislature, grant discretionary increases of an additional 5% per year, provided that the total percentage increase does not exceed the percentage change in the CPI and that the increase can be supported by the assets of the System. The CPI grew at a rate of 1.70% during the year.

The March 1, 2015 discretionary postretirement benefit increase of 0.70% increased the actuarial present value of all future benefits by \$55.2 million as of July 1, 2014. The ROPP COLA of 2.30% increased the actuarial present value of all future benefits by \$104.0 million as of July 1, 2014.

The 2015 COLA's and the cancellation of rate increases have both been incorporated in the liabilities shown on Table 10. Thus, the July 1, 2014 Post-Adjustment amounts shown on lines A, C, E, and G have been increased \$148.9 million from the Pre-Adjustment amounts.

Gain Sharing

The cost of providing the Gain Sharing allocation, if any, is also included in the “post-adjustments” amounts shown in Table 10. Beginning in 2000, under Section 59-1309, Idaho Code, the Board may allocate all or a portion of “extraordinary gains” to active and retired members and employers as Gain Sharing. Extraordinary gains are defined as the excess, if any, at the close of the fiscal year of the Assets over Actuarial Accrued Liabilities plus an amount necessary to absorb a one standard deviation market event without increasing contribution rates, as determined by the Board. Under the Board’s current investment policy, assets in excess of a 113% funded ratio are considered extraordinary gains. Since the funding ratio as of July 1, 2014, is less than 113%, no assets are available for consideration for Gain Sharing.

Funding Policy

Table 12 shows the effect on the valuation of the statutory requirement that member contribution rates must always be a fixed percentage of the employer contribution rate (72% for fire and police and 60% for other employees). Effective July 1, 2003, the employer contribution rate for fire and police members is set at 0.34% higher than for general members, reflecting 0.24% for the 1993 changes in disability provisions for fire and police members, and 0.10% for the 2003 addition of a \$100,000 death benefit for fire and police members who die in the line of duty.

The Board has set the current total contribution rate to 18.39%. Increases in the total contribution rate were scheduled for July 1, 2015 to 19.89% and for July 1, 2016 to 22.17%. These rate increases were cancelled during the September 2014 Board meeting. A continuation of a total rate in excess of the normal cost rate is expected to meet the criteria of the Board’s Funding Policy. The revised Funding Policy was adopted September 29, 1998, and establishes guidelines for the Board in setting contribution rates. Several of the funding goals under this Policy include establishing a range of safety, while maintaining a stable contribution rate and a well-funded status.

As shown in Table 12, as of July 1, 2014, the current contribution rates, without any future rate increases, will permit the Board to achieve these goals, since the UAAL amortization period is less than or equal to 25 years, as required by statute.

Employer Contributions
(continued)

**Funding Policy
(continued)**

The schedule of member and employer contribution rates by class is shown in the table below.

	Fire and Police	General and Teachers	Combined Mix
July 1, 2014 Rates			
Employer	11.66%	11.32%	11.36%
Member	8.36%	6.79%	7.03%

Public Employee Retirement System of Idaho

Section 6: Supplemental Information

Cash Flow Projections

Table 13 summarizes the historical cash flows for PERSI and the projected cash flows for the next 10 years. Contributions include both employer and member contributions. The table shows that net cash flow has been decreasing in recent years. This is a typical pattern in the maturing of a retirement system. Beginning in 2007, contributions were less than benefits and the System began drawing on the fund that has been built. The cash flow is projected to be negative in each of the next ten years.

The historical cash flows include contributions made for Optional Retirement Program (ORP) members as well as contributions, expenses, and excess benefits paid by the Firefighters Retirement Fund and the Idaho Falls Police Retirement Fund prior to 1996.

The projected cash flows include PERSI contributions, benefits, and expenses. They are based on the actuarial assumptions as stated in Appendix A. Expenses are based on the expenses for the year ended June 30, 2014 increased annually with the actuarial inflation assumption of 3.25%. Any increases in future contribution rates will increase net cash flow. The projected cash flows do not include:

- Projected contributions for ORP members
- Projected benefits payable to the spouses of disabled members
- Projected benefits to currently inactive members
- Future discretionary COLA payments
- Future discretionary Gain Sharing allocations

Distribution of Retired Members

Table 14 shows two charts. The top chart illustrates the average monthly benefit payment for each group of retired members, based on the year of retirement. The bottom chart illustrates the number of members receiving a monthly benefit as of July 1, 2014, based on the year of retirement. The jump in retirements in 1996 is believed to be an issue with imperfect retirement date data in PERSI's records. The retirement date issue does not affect the funding calculations of this valuation.

**Public Employee Retirement
System of Idaho**

Table 13: Cash Flow History and Projections
(All dollar amounts in millions)

Year Ending June 30	Historical Cash Flows		
	Contributions	Benefits and Administrative Expenses	Net Cash Flow
2005	\$ 382	\$ 363	\$ 19
2006	405	405	0
2007	419	442	(23)
2008	444	485	(41)
2009	465	524	(59)
2010	463	560	(97)
2011	458	603	(145)
2012	456	647	(191)
2013	470	694	(224)
2014	515	736	(221)

Year Ending June 30	Projected Cash Flows (PERSI Funds Only)		
	Contributions ⁽¹⁾	Benefits & Administrative Expenses ⁽²⁾	Net Cash Flow ⁽³⁾
2015	\$ 516	\$ 775	\$ (259)
2016	535	824	(289)
2017	555	865	(310)
2018	576	908	(332)
2019	598	953	(355)
2020	620	1000	(380)
2021	643	1048	(405)
2022	667	1098	(431)
2023	692	1150	(458)
2024	718	1203	(485)

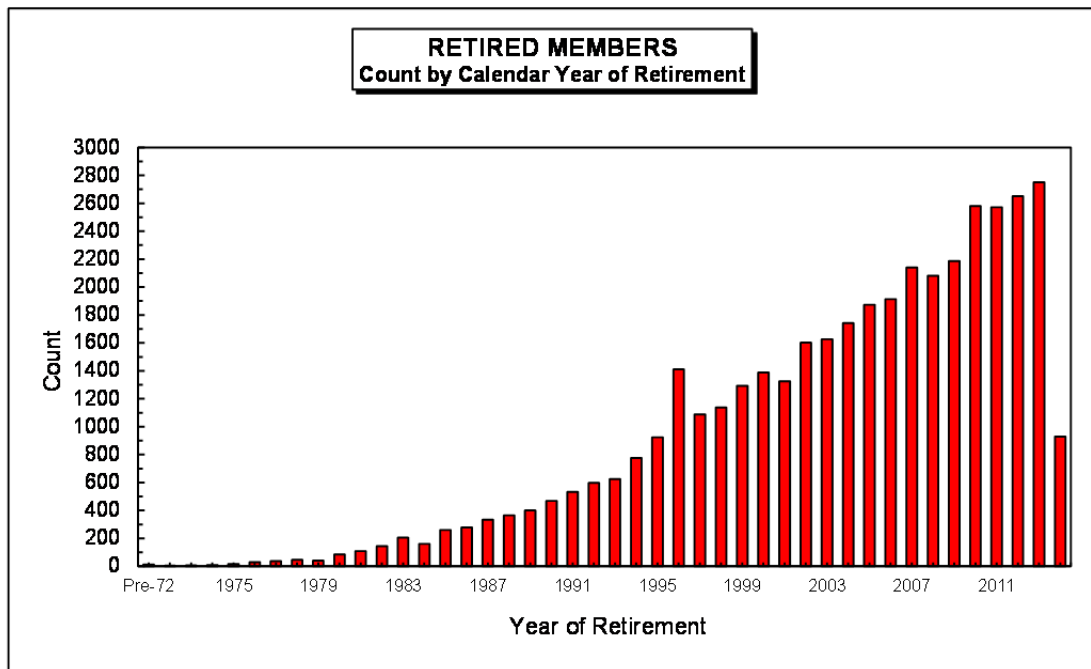

- (1) Projected contributions are based on the contribution rate schedule adopted at the Sept. 2014 Board Meeting.
- (2) Projected expenses are based on expenses for FYE 2014 and the annual inflation assumption of 3.25%
- (3) A negative cash flow means a portion of the fund's investment income will need to be used to cover expected benefit payments. This could impact the fund's future asset allocations and liquidity needs.

Public Employee Retirement
System of Idaho

System of Idaho

Table 14: Distribution of Retired Members by Calendar Year of Retirement

2014 reflects only a partial year of retirements.

Public Employee Retirement System of Idaho

Appendix A: Actuarial Procedures and Assumptions

The actuarial procedures and assumptions used in this valuation are described in this section. The mortality and economic assumptions were changed as of July 1, 2014 as a result of our 2014 Investigation of Experience.

The mortality assumptions are based on the RP-2000 Mortality Table with generational mortality adjustments, as described in this section.

The actuarial assumptions used in the valuations are intended to estimate the future experience of the members of the System and of the System itself in areas that affect the projected benefit flow and anticipated investment earnings. Any variations in future experience from that expected from these assumptions will result in corresponding changes in the estimated costs of the System's benefits.

Table A-1 summarizes the assumptions. The mortality rates are taken from the sources listed. The other rates were developed from the experience of the System and are illustrated in Tables A-7 through A-13, as noted.

Tables A-2 through A-4 shows how current active members are expected to leave active status. Subgroups by age and employment class are analyzed according to the expected termination cause, based on the actuarial assumptions used in this valuation.

Tables A-5 and A-6 present the expected annual percentage increase in salaries. Table A-13 presents the probability of refund of contributions upon termination. The other tables in this section give rates of decrement expressed as percentages. The rates of decrement are referred to in actuarial notation by the general symbol "q".

Actuarial Cost Method

The actuarial valuation is prepared using the individual entry age actuarial cost method. In August 2013 the Board adopted this new cost method. Under the principles of this method, the actuarial present value of the projected benefits of each individual included in the valuation is allocated as a level percentage of the individual's projected compensation between entry age and assumed exit. The portion of this actuarial present value allocated to a valuation year is called the normal cost. The portion of this actuarial present value not provided for at a valuation date by the sum of (a) the actuarial value of the assets, and (b) the actuarial present value of future normal costs is called the unfunded actuarial accrued liability (UAAL). The UAAL, if positive, is amortized as a level percentage of the projected salaries of present and future members of the System (and ORP) during various amortization periods. In effect, this means that UAAL amortization payments are assumed to grow at the same rate as the General Wage increase assumption (currently 3.75%).

The normal cost rates used in this valuation were calculated based on all current active members as of July 1, 2014, for each sex and type of employee in that valuation. The normal cost and projected salaries for fiscal year 2015 for all active members were calculated. The ratio of the two is the aggregate normal cost rate. Separate normal cost rates for each sex and type of employee are shown in Table 11. The separate rates are for illustrative purposes and are not used otherwise in the actuarial valuation.

Records and Data

The data used in this valuation consist of financial information and the age, service, and income records for contributing and former contributing members and their survivors. All of the data were supplied by the System and are accepted for valuation purposes without audit but were reviewed for reasonableness.

Growth in Membership

For benefit determination purposes, no growth in the membership of the System is assumed. For funding purposes, the total payroll of covered members is assumed to grow due to the combined effects of future wage increases of current active members and the replacement of the current active members by new employees. No growth in the total number of active members is assumed.

Employer Contributions	The employer contribution rate has been set by the Retirement Board effective July 1, 2013 at 11.66% for fire and police members and 11.32% for general members. During the September 2014 Board meeting, the two future scheduled rate increases were cancelled.
ORP Contributions	Until July 1, 2025, 1.49% of the university ORP members' salaries will be used to finance the actuarial accrued liability.
Member Contributions	The member contribution rate is set by law to be 60% of the employer contribution rate for all members except fire and police members, whose member contribution rate is set at 72% of the employer rate (prior to the 0.10% increase for the death benefit for fire and police members). After the 72% is applied, the safety member rates are increased by 0.04% for the member-paid lump sum duty disability benefit. As of July 1, 2013, the general member rate is 6.79% and the fire and police rate is 8.36%. The Board voted to cancel future rate increases at the September 2014 Board meeting.
Valuation of Assets	All assets are valued at market as of the valuation date. The market-value valuation basis for all assets was effective July 1, 1994.
Investment Earnings and Expenses	The future investment earnings of the assets of the System are assumed to accrue at an annual rate of 7.50%, compounded annually. Investment earnings of 0.50% are assumed sufficient to cover the expenses of the System, allocated 0.40% for investment expenses and 0.10% for general administrative expenses. These rates were adopted July 1, 2012.
Postretirement Benefit Increases	A nondiscretionary postretirement increase of 1% per year is assumed for the primary valuation.
Cash Refund Benefits	Members receiving retirement benefits will not receive less than each member's accumulated member contributions at retirement. For the active members, this is approximated in the valuation using a three year certain period for annuity retirement benefits.

**Interest on
Employee
Contributions**

The credited interest rate on employee contributions is assumed to be 8.00%, the current investment return assumption plus one percentage point. The actual credited interest rate will depend on the returns earned by the System's assets. The Board's current policy is to credit interest during each calendar year equal to the greater of: 1) 90% of PERSI's actual rate of return, net of expenses for the prior fiscal year (ending June 30), or 2) a rate based on U.S. Treasury bills with a minimum of 1.0%.

Gain Sharing

The report shows the cost of Gain Sharing, if any, to be distributed. Gain Sharing is reflected as a reduction in assets. No Gain Sharing is available for 2014.

Future Salaries

The rates of annual salary increase assumed for the purpose of the valuation are illustrated in Tables A-5 and A-6. The current assumptions for promotions and longevity were adopted July 1, 2012. In addition to increases in salary due to promotions and longevity, this scale includes an assumed 3.75% per annum rate of increase in the general wage level of the membership, adopted July 1, 2012.

Retirement

After members attain age 55 (50 for fire and police) and have five years of service, they may retire early with a reduced benefit. These early retirement rates are shown in Table A-9.

During the year after first satisfying the age and service requirements for unreduced benefits, whether for service or early retirement, members are assumed to retire at the rates shown in Table A-7. After the first year of eligibility, members are assumed to retire at the rates shown in Table A-8.

All general members who attain or who have attained age 75 in active service and all other members who have attained age 70 in active service are assumed to retire immediately.

The assumptions regarding termination of employment, early retirement, and unreduced service retirement are treated as a single set of decrements with regard to a particular member. For example, a teacher member hired at age 30 could be expected to possibly withdraw from the System due to death, disability, or other termination of employment until age 55. After age 55, the member could still withdraw due to death or disability. From age 55-60, the member could also withdraw with an early retirement and a reduced benefit as shown in Table A-9. At age 60 (Rule of 90), the member is first eligible to retire with an unreduced benefit. The probability of retiring at age 60 is shown in Table A-7.

**Retirement
(continued)**

Thereafter, the probabilities of retirement for this member are indicated in Table A-8.

Thus, in no year during the member's projected employment would more than one of the decrements shown in Tables A-12, A-7, A-8, or A-9 be applied.

Tables A-7, A-8, and A-9 were revised July 1, 2012.

Disablement

The rates of disablement used in the valuation are illustrated in Table A-10. These rates were revised July 1, 2012.

**Mortality – Other
Than Disabled
Members**

Several different sets of mortality rates are used in the valuation for contributing members, members retired for service, and beneficiaries. These rates are illustrated in Table A-11. These rates were adopted July 1, 2014.

Teachers

Males RP-2000 Combined Table for Healthy Individuals for males, set back three years.

Females RP-2000 Combined Table for Healthy Individuals for females, set back three years.

Fire and Police

Males RP-2000 Combined Table for Healthy Individuals for males with no offset.

Females RP-2000 Combined Table for Healthy Individuals for females, set forward one year.

For deaths of active Fire and Police members, 10% are assumed to be duty related. This rate was adopted July 1, 2008.

General Employees and All Beneficiaries

Males RP-2000 Combined Table for Healthy Individuals for males, set back one year.

Females RP-2000 Combined Table for Healthy Individuals for females, set back one year.

All mortality tables are adjusted with generational mortality adjustments using projection scale AA as shown in Table A-11B.

The projection scale is applied from the year 2000 to the year in which the mortality assumption is being applied.

Mortality – Disabled Members

For disabled members, the mortality rates used in the valuation are the rates from the RP-2000 table for disabled individuals for respective sexes, with a one-year setback for males and a one-year set forward for females. These rates are illustrative in Table A-11A. These rates were adopted July 1, 2014.

All mortality tables are adjusted with generational mortality adjustments using projection scale AA as shown in Table A-11B.

The projection scale is applied from the year 2000 to the year in which the mortality assumption is being applied.

Other Employment Terminations

Table A-12 shows the rates assumed in this valuation for future withdrawal from active service for reasons other than death, disability, or retirement with an unreduced benefit. These rates were revised July 1, 2012.

Terminating employees may withdraw their contributions immediately upon termination of employment and forfeit the right to further benefits, or they may leave their contributions with the System. Former contributing members whose contributions are on deposit may later elect to receive a refund, may return to work, or may remain inactive until becoming eligible to receive a retirement benefit.

All terminating members who are not eligible for vested benefits are assumed to withdraw their contributions immediately.

Table A-13 gives the assumed probabilities that vested members will withdraw their contributions immediately upon termination. These rates were adopted July 1, 2012.

Note: Effective July 1, 1985, certain police officers were reclassified and included in the general employee group. For this class of members, the actuarial assumptions are the same as those shown for fire and police.

Probability of Marriage

If death occurs in active or disability retirement status, 75% of all members were assumed to have eligible surviving spouses. The spouse is assumed to be three years younger than the male members and three years older than the female members.

Fire and Police Duty Death and Disability

For the Fire and Police active members, 10% of deaths and 25% of disabilities are assumed to be duty related.

**Joint and Survivor
Pop-Up Loading
Factors**

PERSI provides that for members retiring on or after October 1, 1992, if the spouse of a member with a joint and survivor form of payment dies, the member's PERSI benefit is increased to eliminate the reduction to the member's benefit for the joint and survivor option.

For retired members who have both a level income option and a joint & survivor form of payment, we value their benefit by valuing the joint and survivor benefit without the pop-up feature and apply a load to account for the pop-up feature. For retired members, our current assumption is a 1% load for male members and 1.50% load for female members. These percentages are applied to the Present Value of Benefits (PVB) for these members.

For active members, we also make an adjustment to the liabilities other than for death and disability to account for the joint and survivor pop-up feature. Our current assumption is a 0.65% load factor for males and 0.35% factor for females. These assumptions were adopted July 1, 2008.

Inactive Members

For vested inactive members not currently receiving benefits, the present value of benefits is determined based on the estimated benefit payable for retirement at the later of the member's current age or age 60 (age 53 for fire and police members). This assumption was adopted July 1, 2012.

For non-vested inactive members not currently receiving benefits, the present value of benefits is equal to the accumulated member contributions.

**Present Value of
Benefits for Active
Members with No
Salary**

There are active members who are reported in the valuation data as active, but with no salary. Discussions with PERSI staff indicated that these members are generally terminated, but that their record has not yet been completely updated. For the valuation, we treat these members as either vested inactive or non-vested inactive members. For the vested members, we do not have sufficient benefit information to determine a liability directly. We assume that these members have a liability determined from the ratio of Present Value of Benefits to accumulated member contributions for vested inactive members. Currently that ratio is 1.45. This assumption was adopted July 1, 2012.

Public Employee Retirement
System of Idaho

Table A-1: Summary of Valuation Assumptions
July 1, 2014

I. Economic Assumptions	
A. General wage increases	3.75%
B. Investment earnings (including 0.50% for expenses)	7.50

System of Idaho

Table A-2: Analysis of Current Active Membership by Expected Cause of Termination - Fire and Police

Tables A-2 through A-4 summarizes, quinquennially, all causes of termination by type of termination and member's current age. For example, of the fire and police members currently age 30-34, 42.4%, or 463, are expected to eventually terminate membership due to a service retirement. Likewise, 46.0%, or 503, are expected to leave employment prior to retirement, death or disability.

<u>Age</u>	<u>Number Active</u>	<u>Service Retirement</u>	<u>Early Retirement</u>	<u>Death & Disability</u>	<u>Other Terminations</u>

Public Employee Retirement System of Idaho

Appendix B: Provisions of Governing Law

All actuarial calculations are based on our understanding of the statutes governing the Public Employee Retirement System of Idaho, as contained in Sections 59-1301 through 59-1399, inclusive, of the Idaho Code, with amendments effective through July 1, 2014. The benefit and contribution provisions of this law are summarized briefly below, along with corresponding references to the Idaho Code. This summary does not attempt to cover all the detailed provisions of the law. Only those benefits in effect through July 1, 2014 and those ratified at the September 2014 Board Meeting are considered in this valuation. The items in parentheses are the provisions applicable to firefighters and police officers.

Effective Date

The effective date of the Retirement System was July 1, 1965.

Member Contribution Rate

The member contribution rate effective July 1, 2014 is 6.79% (8.36%) of salary. As described in Section 5, there are currently no scheduled rate increases.

The member contribution rate is fixed at 60% (72%) of the employer contribution rate. For firefighters and police officers, the 72% adjustment is applied after reducing the employer rate by 0.10% for the 2003 addition of a \$100,000 death benefit for fire and police members who die in the line of duty. After the 72% is applied, the resulting rate is increased by 0.04% for the lump sum duty disability benefit. Member contributions have been “picked up” on a pre-tax basis by the employer since June 30, 1983 (Sections 59-1331 and 59-1332).

Employer Contribution Rate

The employer contribution rate is set by the Retirement Board (Section 59-1322). As described in Section 5, there are no longer any future scheduled rate increases. The current rates are reflected in this valuation

Service Retirement Allowance

Eligibility

Age 65 (60) with five years of service, including six months of membership service (Section 59-1341).

Amount of Allowance

For each year of credited service, the annual service retirement allowance is 2.0% (2.3%) of the highest 42-month average salary (Section 59-1342).

Service Retirement Allowance (continued)

Minimum Benefit

\$60 (\$72) annual allowance for each year of service. The dollar amounts increase after 1974 according to the rate of cost of living increases in retirement allowances (Section 59-1342).

Maximum Benefit

In no case may a member's regular retirement benefit exceed the highest three-year average salary of the member (Section 59-1342).

Normal Form

Straight life retirement allowance plus any death benefit (Section 59-1351).

Optional Form

Actuarial equivalent of the normal form under the options available, according to the mortality and interest basis adopted by the Board (Section 59-1351).

Early Retirement Allowance

Eligibility

Age 55 (50) with five years of service, including six months of membership service (contributing members only) (Section 59-1345).

Amount of Allowance

Full accrued service retirement allowance if age plus service equals 90 (80); otherwise, the accrued service retirement allowance, reduced by 3% for each of the first five years by which the early retirement date precedes the date the member would be eligible to receive the full accrued benefit, and by 5.75% for each additional year (Section 59-1346).

Vested Retirement Allowance

Eligibility

Former contributing members with five years of membership service are entitled to receive benefits after attaining age 55 (50) (Section 59-1345).

Amount of Allowance

Same as early retirement allowance (Section 59-1345).

Disability Retirement Allowance

Eligibility

Five years of membership service. For a police officer or a firefighter hired after July 1, 1993, who is disabled from an occupational cause, there is no service requirement (Section 59-1352).

Amount of Allowance

Projected service retirement allowance based on accrued service plus service projected to age 65 (60) (latter limited to excess of 30 years over accrued service) less any amount payable under workers' compensation law (Section 59-1353).

Normal Form

Temporary annuity to age 65 (60) plus any death benefit. Service retirement allowance becomes payable at age 65 (60) (Section 59-1354).

Safety Member Lump Sum Duty Disability Benefit

Fire and Police members who are disabled in the line of duty are eligible for a \$100,000 lump sum benefit, in addition to the annuity benefits discussed above (Section 59-1352A).

Death Benefits

After Retirement

Under the normal form of the retirement allowance, the excess, if any, of the member's accumulated contributions with interest at retirement over all payments received. Otherwise, payable according to the option elected (Section 59-1361).

Before Retirement

A. An automatic joint and survivor option applied to the actuarial equivalent of the member's accrued service retirement allowance is paid to the surviving spouse of a member with at least five years of service who dies while:

- i. contributing;
- ii. not contributing, but eligible for benefits; or
- iii. retired for disability,

or

B. If a member with at least five years of service has no spouse, a lump sum payment is made equal to twice the accumulated contributions with interest (Section 59-1361).

or

C. If a member with at least five years of service has no spouse, a lump sum payment is made equal to twice the accumulated contributions with interest (Section 59-1361).

Fire and police members are entitled to an additional \$100,000 payment if death occurs in the line of duty. (Section 59-1361 A).

Withdrawal Benefits

Accumulated contributions with interest (Section 59-1358). The interest rate is determined by the Board (Section 59-1301(26)).

**Postretirement
Increases**

Postretirement benefit increases are based on changes in the Consumer Price Index. The measurement period for changes in the CPI-U is August to August. The COLA changes are implemented effective on the March 1 following the measurement period.

If the CPI-U increases by at least 1%, the COLA is at least 1%. If the CPI-U increases by more than 1%, an additional postretirement increase of up to 5% each year (but not more than the increase in the CPI-U) may be authorized by the Board, subject to the approval of the Legislature, if it finds that the System's assets are no less in value than its actuarial liabilities, including those created by the additional increase.

If the CPI-U increases by less than 1% or decreases, the COLA is automatic, based on the change in the CPI. If a negative COLA is applicable, the negative COLA cannot decrease benefits by more than 6%. Additionally, a negative COLA cannot decrease a member's benefit below the amount of the benefit at the initial benefit date.

If a COLA is implemented that is less than the increase in the CPI-U, members' benefits will not retain their full inflation-adjusted purchasing power. In such cases the Board may implement a Restoration of Purchasing Power (ROPP) COLA at a later date to bring those members closer to 100% of inflation adjusted purchasing power. As with a discretionary COLA, a ROPP is subject to approval of the Legislature and requires that the System's assets are no less in value than its actuarial liabilities, including those created by the additional increase. (Section 59-1355).

Gain Sharing

Beginning in 2000, under Section 59-1309, Idaho Code, the Board may allocate all or a portion of “extraordinary gains” to active and retired members and employers as Gain Sharing.

Extraordinary gains are defined as the excess, if any, at the close of the fiscal year of the Assets over Actuarial Accrued Liabilities plus an amount necessary to absorb a one standard deviation market event without increasing contribution rates, as determined by the Board. Under the Board’s current investment policy, assets in excess of a 113% funded ratio are considered extraordinary gains. The Board has the authority to rescind the Gain Sharing up to the date of distribution.

This work product was prepared solely for PERSI for the purposes described herein and may not be appropriate to use for other purposes. Public Employee Retirement System of Idaho

Appendix C: Valuation Data and Comparative Schedules

This valuation is based on the membership of the System as of June 30, 2014. We relied on data supplied by the System. If there are material defects in the data, it is possible they would be uncovered by a detailed, systematic review and comparison of the data to search for data values that are questionable or relationships that are materially inconsistent. Such a review was beyond the scope of our assignment.

The membership of the System includes employees of the State of Idaho and participating political subdivisions. The membership is divided into three categories:

1. *Fire and Police*

State police officers, most local police officers and sheriffs, local firefighters, penitentiary employees, employees of the Youth Services Center, and employees of the adjutant general and military department.

2. *Teachers*

Faculty members of local school districts and institutions of higher learning who are not members of an Optional Retirement Program.

3. *General Employees*

Other state employees and general employees of the political subdivisions, local school districts, and colleges and universities.

The data for all contributing members, former contributing members, and their survivors are summarized in Table C-1. Table C-2 summarizes their age and service statistics. Table C-3 summarizes the active members by age groups.

Detailed statistics regarding the distributions of members receiving service or disability retirement benefits, beneficiaries of deceased members, and active members in each category of membership have been reported separately to the System.

Tables C-4 through C-7 summarizes the experience of the System since June 30, 1968. Earlier data are not comparable, since the Idaho Teachers' Retirement System merged with the Public Employee Retirement System of Idaho just prior to that date.

Table C-4 shows a summary of the active members and the annuitants covered as of the various valuation dates.

Table C-5 summarizes the contribution rates, the amortization period, and the UAAL determined at each annual actuarial valuation.

Table C-6 presents a brief history of the financial experience of the System's investments.

Any review of these comparative schedules should be made in the light of Tables C-7 and C-8, which show the significant changes affecting the actuarial valuations in recent years.

Table C-9 summarizes changes in status for active and inactive numbers and annuitants between July 1, 2013 and July 1, 2014.

Table C-10 reconciles the member records received from PERSI with the records used in the valuation.

The total salaries paid to ORP members who are contributing 1.49% for the year ending June 30, 2014 was \$263,871,881. As of July 1, 2012, the ORP members who had been contributing 3.83% of salary are no longer required to contribute anything. These contributions are used to finance the UAAL.

Public Employee Retirement System of Idaho

Table C-1: Summary of Membership Data

	Active Members			Annuitants		
	Number ⁽¹⁾	Annual Salaries in Thousands	Average Annual Salaries	Number	Annual Benefits in Thousands	Average Annual Benefits

Total	65,535	\$2,634,566	\$40,201	38,947	\$651,466	\$16,727

(1) Not included in these figures are the following:

	Vested Inactive Members Not Currently Receiving Benefits			Non-Vested Inactive Members	Other Inactive Members ⁽³⁾	Total Inactive Members
	Number	Annual Benefits in Thousands ⁽²⁾	Average Annual Benefits			
2014	11,478	\$69,010	\$6,012	16,769	26	28,273
2013	11,050	\$65,853	\$5,960	16,026	34	27,110

(2) At assumed retirement date. New assumptions for the assumed retirement age were adopted for the July 1, 2012 valuation.

(3) These members were active with at least 5 years of service as of the valuation date, but PERSI reported their salary as zero. They were treated as vested inactive members, and their liability was estimated as 1.45 times the accumulated employee contributions.

Note: In 2014, 135 vested annuitants of the Firefighters' Retirement Fund were not eligible for a PERSI benefit. In 2013, 139 were not eligible.

This work product was prepared solely for PERSI for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work. Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

Notes on Table C-5

- (1) Normal cost rates and employee rates prior to 1986 are based on actual employer rates. They would vary from the rates shown if employer rates were changed.
- (2) Excludes additional administrative contributions required before 1980. Aggregate weighted employer rate since 1993. Cannot be less than the normal cost rate.
- (3) 3.6% of annual salary up to \$4,800, plus 7.2% of excess.
- (4) 3.0% of annual salary up to \$4,800, plus 6.0% of excess.
- (5) Calculated as of the valuation date, prior to any COLA adjustment or Gain Sharing allocation. Beginning in 1991, amounts funded by ORP contributions are not included in the UAAL.
- (6) For actuarial valuations prior to 1971, an explicit amortization period was not calculated. The current employer contribution rate was compared to a contribution rate based on either a 30 or 50 year amortization period.
- (7) Based on the results of the 1977 experience study, the valuation results indicated that the employer contribution rate in effect at the time of the valuation would be insufficient to amortize the UAAL over a reasonable period. Subsequent increases in the employer contribution rate in 1979 and 1980 resulted in a reasonable amortization period.
- (8) Amortization rates in 1992 and before represent 30-year funding. Amortization rates in 1993 and after represent 25-year funding.
- (9) GASB required an ARC to be computed for all plan years after June 15, 1996. As long as a positive UAAL exists and is being amortized over a reasonable period of time, generally less than 30 years, the ARC is equal to the actual contribution rate set by the Board. If a Funding Reserve exists, GASB requires the amortization of the reserve and a calculated ARC less than the normal cost rate. The actual PERSI rate cannot be less than the normal cost rate under the statutory requirements. The ARC calculated as of the valuation date is applicable to the employer fiscal year commencing October 1 of the calendar year following the valuation date. The ARC includes the discretionary COLA increases if approved by the Board prior to the completion of the valuation report.
Beginning with the 2014 valuation, the ARC will no longer be reported. A separate accounting valuation report will be issued in accordance to the new GASB 67 and 68 reporting standards.
- (10) Permanent rate is shown; temporary rate of 9.80% was effective November 1, 1997 until Board adopted permanent 9.80% rate April 2000.
- (11) The highest scheduled contribution rate that is reflected in the valuation is shown.
- (12) For 2014, the amortization period and UAAL reflect the granted March 1, 2015 discretionary COLA and cancelled rate increases.

(1) Valuations as of July 1. Postretirement increase effective previous January 1 for years prior to 1987, previous March 1 for 1987 and after.

(2) Minimum monthly benefit per year of service; benefit levels for fire and police members are 20% greater than amount shown.

(3) Average rate credited on member contributions during year prior to valuation date, actual rates may vary during the year.

(4) 5.3% for 1976 retirees.

(5) The March 1, 2010 COLA was -1.48% with a Restoration of Purchasing Power (ROPP) adjustment of 2.48% for a net COLA of 1%.

(6) The March 1, 2015 COLA was 1.70% with a Restoration of Purchasing Power (ROPP) adjustment of 2.3% for a net COLA of 4%.

Public Employee Retirement
System of Idaho

Table C-8: Changes Affecting Actuarial Valuations - Descriptions

Valuation Date	Change
1968	Actuarial assumptions were revised to reflect actual experience for the study period from inception to June 30, 1967.
1969	Discretionary cost-of-living increases and death benefit provisions were adopted.
1971	Vesting, early retirement, and death benefits were improved.
1974	Major changes in actuarial assumptions and a new retirement benefit formula were adopted.
1976	Actuarial assumptions for investment earnings, future salaries, and service retirement were changed. Changes in the compulsory retirement provisions, death benefit eligibility, and the maximum discretionary cost-of-living increases, including funding for an automatic 1% annual increase in postretirement benefits.
1977	Major changes in actuarial assumptions as a result of a study of the System's actual experience. These revisions were tentative, made on the basis of limited experience data.
1978	The termination of employment and the retired mortality assumptions were revised based on an update of the study of the System's actual experience.
1979	Reflects the maximum 40-year funding period enacted in 1979 legislation.
1980	Actuarial assumptions for investment earnings, salary growth, and disabled members' mortality assumptions were changed. Reduction factors for early retirement were modified and employee contribution rates were increased. The bond valuation method was revised, generating a one-time investment gain.
1982	Actuarial assumptions were revised to reflect the results of the System's experience over the three-year period ending June 30, 1981. The early retirement "Rule of 90(80)" and graded increase in both employee and employer contribution rates were implemented.
1983	The asset valuation method for mortgages was changed.
1985	Actuarial assumptions were revised based on the experience study for the period July 1, 1981 through June 30, 1984.
1988	Actuarial assumptions were revised based on the experience study for the period July 1, 1984 through June 30, 1987.

Valuation Date	Change
1992	Actuarial assumptions were revised based on the 1992 Investigation of Experience Study. Benefits and contributions were increased effective October 1, 1992. The benefit percentage factor was increased, the averaging period used in determining average monthly salary was decreased, and the early retirement reduction factors were decreased.
1993	Disability eligibility provisions for fire and police members were changed and contribution rates were increased to reflect this change. Benefits and contributions were increased effective October 1, 1993. The benefit percentage factor was increased, the averaging period used in determining average monthly salary was decreased, and the early retirement reduction factors were decreased.
1994	Actuarial assumptions were revised based on the 1994 Investigation of Experience Study. Benefits and contributions were increased effective October 1, 1994. The benefit percentage factor was increased, the averaging period used in determining average monthly salary was decreased, and the early retirement reduction factors were decreased.
1996	Actuarial assumptions were revised based on the 1996 Investigation of Experience Study.
1998	Mortality and Salary increase assumptions were revised based on the 1998 Investigation of Experience Study. The benefits for all annuitants were restored to 100% of purchasing power at the original retirement date.
2000	The permanent total contribution rate was reduced effective November 1, 2000. Benefits were increased and disability eligibility service requirements were reduced effective July 1, 2000. The interest crediting rate on employee contributions was changed to the actual return of the System. Retirement and disablement assumptions were revised based on the 2000 Investigation of Experience Study.
2001	A Gain Sharing allocation of \$155.4 million was granted by the Board.
2002	Salary increase and termination of employment assumptions were revised based on the 2002 Investigation of Experience Study.
2003	Scheduled contribution rate increases at July 1, 2004 and July 1, 2005 reflected. \$100,000 death benefit for Fire and Police duty deaths added along with 0.1% increase in Fire and Police Employer Contribution rate.

Valuation Date	Change
2004	Scheduled contribution rate increases at July 1, 2006 reflected. Assumption changes based on 2004 Investigation of Experience Study.
2005	Contribution rate increases scheduled for July 1, 2005 and July 1, 2006 were delayed to July 1, 2008 and July 1, 2009. In addition to a full 2.7% COLA, retirees received a 0.8% Restoration of Purchasing Power benefit on March 1, 2005, to restore the portion of the March 1, 2003 COLA that was not originally granted.
2006	The mortality assumptions were changed to generational mortality as described in the 2006 Investigation of Experience report (dated May 15, 2006). Future scheduled rate increases are not included in the ARC or in the valuation results except where noted.
2007	Final Average Earnings (FAE) used to calculate benefits was changed to the greater of current FAE (provided by the PERSI) and estimated FAE. Future scheduled rate increases are not included in the ARC or in the valuation results. The contribution rate for university members of the optional retirement plan (ORP) was changed to 1.49% of members' salaries through July 1, 2025. In the previous valuation, the rate was 3.03% to be paid through July 1, 2015.
2008	Demographic actuarial assumptions were revised based on the 2009 Investigation of Experience Study.
2009	The contribution rate for Fire & Police Members was changed from 7.65% to 7.69%. \$100,000 disability benefit for Fire and Police duty disabilities added.
2010	Mortality and economic actuarial assumptions were revised based on the 2010 Investigation of Experience Study. Contribution rate increases were added at July 1, 2011, July 1, 2012, and July 1, 2013. Retirees received a 2.48% Restoration of Purchasing Power benefit on March 1, 2010, to restore a portion of the March 1, 2009 COLA that was not originally granted.
2011	New Contingent Annuitant actuarial equivalence factors were adopted for members retiring on or after July 1, 2011. Scheduled contribution rate increases on July 1, 2011, July 1, 2012, and July 1, 2013 were all delayed one year.
2012	Demographic and Economic actuarial assumptions were revised based on the 2012 Active Experience Study.
2013	Change in the actuarial cost method, from aggregate entry age to individual entry age.

Valuation Date	Change
2014	<p>Mortality assumptions were revised based on the 2014 Investigation of Experience Study. Scheduled contribution rate increases were cancelled.</p> <p>Retirees were granted a 2.30% Restoration of Purchasing Power benefit, effective on March 1, 2015, to restore a portion of the prior years' COLAs that were not originally granted.</p>

The table above describes record changes affecting the number of members who were included in the valuation. Milliman made minor data adjustments to correct records with an invalid date of birth, date of hire, gender, or class. There were fewer than 100 records with invalid fields.

This work product was prepared solely for PERSI for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work. Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

Public Employee Retirement System of Idaho

Appendix D: Glossary

The following definitions are largely excerpts from a list adopted in 1981 by the major actuarial organizations in the United States. In some cases, the definitions have been modified for specific applicability to the Public Employee Retirement System of Idaho. Defined terms are capitalized throughout this Appendix.

Actuarial Assumptions

Assumptions as to the occurrence of future events affecting pension costs such as: mortality, withdrawal, disablement, and retirement; changes in compensation; rates of investment earnings and asset appreciation or depreciation; procedures used to determine the Actuarial Value of Assets; and other relevant items.

Actuarial Cost Method

A procedure for determining the Actuarial Present Value of pension plan benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods usually in the form of a Normal Cost and an Actuarial Accrued Liability.

Actuarial Gain (Loss)

A measure of the difference between actual experience and that expected based on a set of Actuarial Assumptions during the period between two Actuarial Valuation dates as determined in accordance with a particular Actuarial Cost Method.

Actuarial Present Value

The value of an amount or series of amounts payable or receivable at various times determined as of a given date by the application of a particular set of Actuarial Assumptions.

Actuarial Valuation

The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a pension plan.

Actuarial Value of Assets

The value of cash, investments and other property belonging to a pension plan as used by the actuary for the purpose of an Actuarial Valuation.

Actuarially Equivalent

Of equal Actuarial Present Value determined as of a given date with each value based on the same set of Actuarial Assumptions.

Amortization Payment	That portion of the pension plan contribution that is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.
Entry Age Actuarial Cost Method	A method under which the Actuarial Present Value of the Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future Normal Costs is called the Actuarial Accrued Liability.
Funding Reserve	The excess of the Actuarial Value of Assets over the Actuarial Accrued Liability. Standard actuarial terminology defines this as the "Funding Excess." PERSI uses the term Funding Reserve.
Normal Cost	That portion of the Actuarial Present Value of pension plan benefits and expenses which is allocated to a valuation year by the Actuarial Cost Method.
Actuarial Accrued Liability	That portion, as determined by a particular Actuarial Cost Method, of the Actuarial Present Value of pension plan benefits and expenses which is not provided for by future Normal Costs.
Unfunded Actuarial Accrued Liability	The excess of the Actuarial Accrued Liability over the Actuarial Value of Assets.
Accrued Benefit	The amount of an individual's benefit (whether or not vested) as of a specific date, determined in accordance with the terms of a pension plan and based on compensation and service to that date.
Projected Benefits	Those pension plan benefit amounts which are expected to be paid at various future times under a particular set of Actuarial Assumptions, taking into account such items as the effect of advancement in age and past and anticipated future compensation and service credits.
Restoration of Purchasing Power Benefit	The Board has discretion to provide a Cost of Living Adjustment (COLA) that is less than amount needed to maintain the purchasing power of the retirees' benefits. The Board may then choose to increase the retirees' benefits at a later date to fully or partially restore the benefit level that the retirees would have had if the Board had given them a full discretionary COLA in all previous years. Such an increase is a Restoration of Purchasing Power Benefit (ROPP).
