## The Board of Trustees

Indiana State Teachers' Retirement Fund
Indianapolis, IN

## Dear Board Members:

An actuarial valuation is prepared annually for the Indiana State Teachers' Retirement Fund. Submitted in this report are the results of the June 30, 2010 actuarial valuation.

## Census Data and Asset Information

The member census data and the asset information for this valuation were furnished by the Chief Financial Officer and Staff. Their efforts and cooperation in furnishing these materials are acknowledged with appreciation. We did not audit the information provided, but we did review it thoroughly for reasonableness and compared it with the prior year's submission for consistency.

## Assumptions and Methods

The actuarial assumptions used in the June 30, 2010 valuation were adopted by the Board pursuant to the Experience Study of August, 2008, which reflects the experience period from July 1, 2002 to June 30, 2007. The June 30, 2010 valuation incorporates the changes in the interest rate, assumed COLA, and amortization method that were approved by the Board on September 16, 2010. Assumptions are summarized in the Assumptions and Methods section of this report. These assumptions and methods have been used to develop the Annual Required Contribution and are consistent with the accounting requirements detailed in GASB Statements No. 25, No. 27, and No. 50.

## Funding Objective

The Indiana State Teachers' Retirement Fund Pre-1996 Account is funded on a pay-as-yougo basis from the State of Indiana.

The funding objective of the Indiana State Teachers' Retirement Fund 1996 Account is to establish and receive contributions that, when invested at the assumed rate of return, will ultimately accumulate assets over each member's working lifetime that will be sufficient to pay expected retirement allowances. As such, an employer contribution rate is calculated each year. That rate is then considered in conjunction with the goal of maintaining a relatively stable contribution over time.

## Certification

We have included several schedules and exhibits in this report, including the following:
Summary of Actuarial Assumptions and Methods
Analysis of Financial Experience
Solvency Test
Schedule of Active Members' Valuation Data
Schedule of Retirants and Beneficiaries
Schedule of Funding Progress
Schedule of Employer Contributions
The valuation was completed under the supervision of a Member of the American Academy of Actuaries with significant experience in valuing employee retirement systems, and was prepared using generally accepted actuarial principles and in accordance with standards of practice prescribed by the Actuarial Standards Board. To the best of our knowledge, this report is complete and accurate and the actuarial methods and assumptions produce results that are reasonable.

Respectfully submitted,

John L. Dowell, FSA, EA, MAAA

JD/Imw

## Comments

## Contribution Rates

The Calculated Contribution Rate section shows the calculated rate for the 1996 Account. That rate is determined as if the 1996 Account were a stand-alone plan.

Since the Pre-1996 Account is funded on a pay-as-you-go basis, only the expected benefit payments are shown in the Calculated Contribution Rate section. A similar normal cost plus UAL amortization contribution rate was calculated for the Pre-1996 Account and the two rates have been combined to determine the Annual Required Contribution shown in the GASB Disclosures section.

## Plan Provisions

There is no ad-hoc COLA on January 1, 2011. Instead, retirees were paid a service-related lump sum in September 2010. These changes are reflected in the June 30, 2010 valuation. Any future COLA is estimated by an ongoing assumption of $1.0 \%$ annual increases in all pension payments beginning January 1, 2012. We are not aware of any other material changes in the plan provisions since the June 30, 2009 actuarial valuation.

## Census Data

Census data for the valuation was provided by ISTRF. We have thoroughly examined the data for reasonableness and consistency with prior years, but we did not otherwise audit it.

## Assumptions and Methods

The actuarial assumptions used in the June 30, 2010 valuation are based on plan experience from July 1, 2002 to June 30, 2007. There were three assumption and method changes effective in the June 30, 2010 actuarial valuation:

- The interest rate assumption has been reduced from $7.50 \%$ to $7.00 \%$.
- The annual assumed COLA has been reduced from $1.50 \%$ to $1.00 \%$.
- The amortization method has been changed from 30-year open amortization to 30-year closed amortization.

These changes were approved by the TRF Board on September 16, 2010.

## Investment Experience

The investment return for the year ended June 30, 2010 was higher than the assumed $7.5 \%$ return. The market value rate of return was $13.3 \%$. Under the asset valuation method, market gains and losses are spread over a four-year period. The Market Value of Assets is currently $\$ 664$ million lower than the Actuarial Value of Assets, meaning a portion of the recent losses have not yet been recognized, but will be in the upcoming years.

## Challenges

The 1996 Account has been steadily funded since its inception. As membership in that portion of the plan increases, the amount of required contributions will increase as a dollar amount, but should remain relatively stable as a percentage of covered payroll with plan experience causing gradual changes. The primary funding challenge will be for the State to meet the projected pay-as-you-go obligations as shown in the Payout Projections section for the Pre-1996 Account.

## Analysis of Financial Experience

| \$Millions | Pre-1996 Account | $\begin{array}{r} 1996 \\ \text { Account } \\ \hline \end{array}$ | Total Fund |
| :---: | :---: | :---: | :---: |
| 6/30/2009 Unfunded Accrued Liability ${ }^{1}$ | \$ 10,928 | \$ 207 | \$11,135 |
| 2009-2010 Investment (gain)/loss | (122) | (114) | (236) |
| Demographic experience / 2010 data | (139) | (1) | (140) |
| Miscellaneous Other ${ }^{2}$ | 86 | (8) | 78 |
| Assumption/Method Changes ${ }^{3}$ | 163 | 108 | 271 |
| Net Change | \$ (12) | \$ (15) | \$ (27) |
| 6/30/2010 Unfunded Accrued Liability ${ }^{1}$ | \$ 10,916 | \$ 192 | \$ 11,108 |

${ }^{1}$ Based on pension and ASA annuities only, i.e. net of ASA account balances.
${ }^{2}$ Miscellaneous Other includes changes due to increases for benefit accruals and expected net interest on assets and liabilities, offset by decreases for contributions and a $13^{\text {th }}$ check to retirees in lieu of the assumed 2011 COLA.
${ }^{3}$ Change in interest rate from $7.5 \%$ to $7.0 \%$ and assumed COLA from $1.5 \%$ to $1.0 \%$.

## Calculated Employer Contribution Rate

|  |  | 6/30/2010 | $\%$ of <br> Projected Payrol for Fiscal 2011 | Projected Employer Contribution for Fiscal 2012 |
| :---: | :---: | :---: | :---: | :---: |

| Unfunded Accrued Liability (UAL)* | \$ | 191,662,151 |  |  |
| Unamortized UAL from Prior Years |  | 205,103,432 |  |  |
| Net Unamortized UAL | \$ | $(13,441,281)$ |  |  |
| Amortization Factor (30-years, level dollar) |  | 13.2777 |  |  |
| Current Year Amortization Payment | \$ | (1,012,320) |  |  |
| Payments Established in Prior Years |  | 15,612,522 |  |  |
| Total Amortization Payments | \$ | 14,600,202 | -0.60\% |  |
| Calculated Employer Contribution Rate | \$ | 157,867,668 | 6.45\% | \$ 174,000,000 |

- The dollar contribution, based on calculated rates, is a projection to the 2012 fiscal year at a $10.0 \%$ payroll growth rate assumption for the 1996 Account and is provided for illustrative purposes.
- The calculated contribution rate for the 1996 Account is determined as if it were a standalone plan.
* Pension and ASA annuity only

## Pre-1996 Account

Expected Pension Benefit Payments \$ 780,400,000 \$ 813,300,000

- The Pre-1996 Account is funded on a pay-as-you-go basis. The figures shown above reflect the expected pension payments to be made during fiscal year 2011 and fiscal year 2012.
- Although not shown here, a Pre-1996 Account normal cost plus a 30-year, level-dollar UAL amortization was calculated and has been reflected in the Annual Required Contribution shown in the GASB Disclosures section.

## GASB Statements No. 25 and No. 27

## Required Supplementary Information

Under the Governmental Accounting Standards Board (GASB) Statements No. 25 and No. 27, certain information about the plan is required to be disclosed. The information presented in the required supplementary schedules was determined as part of the actuarial valuations at the dates indicated. Additional information as of the latest actuarial valuation follows:

| Valuation Date | June 30, 2010 |
| :--- | :--- |
| Actuarial Cost Method | Entry Age Actuarial Cost Method |
| Amortization Method | Level Dollar |
| Amortization Period | 30 Years |
| Asset Valuation Method | $4-$ Year Smoothed Market Value with Corridor |
| Actuarial Assumptions: |  |
| $\quad$ Investment Rate of Return | $7.00 \%$ (Changed from $7.50 \%$ on June 30, 2009) |
| $\quad$ Projected Pay Increases | $3.50-12.50 \%$ (includes $3.00 \%$ wage inflation) |
| $\quad$ Cost-of-Living Adjustments | $1.0 \%$ Compounded Annually on Pension Portion <br> (Changed from $1.5 \%$ on June 30, 2009) |

Membership in the plan consisted of the following at June 30, 2010, the date of the latest actuarial valuation:

|  | $\mathbf{2 0 1 0}$ |
| :--- | ---: |
| Retired Members and Beneficiaries Receiving Benefits | $\mathbf{4 5 , 6 5 9}$ |
| Terminated Plan Members Entitled to but Not Yet Receiving Benefits |  |
| $\quad$ Vested | 7,670 |
| $\quad$ Nonvested | 35,847 |
| Active Plan Members | 72,872 |
| Total | 162,048 |

ARC = Annual Required Contribution
BOY = Beginning of Year
EOY = End of Year

Additional Information:
Annual actuarial valuation reports not issued for FY1988 \& FY1990 - valuations conducted bi-annually prior to FY1991.
Assumed 40-year amortization period for FY1988 - FY1997 since annual actuarial valuation reports were not retained prior to FY1998.

## Closed Group Actuarial Projections

The schedules on the following pages for the Pre-1996 Account were produced by means of an actuarial projection.

Whereas actuarial valuations provide a snapshot of the Retirement Fund as of a given date, actuarial projections provide a moving picture of Retirement Fund activities. The projected active and retired groups are developed from year to year by applying assumptions regarding pre-retirement withdrawal from service, retirements, deaths, and disabilities. Projected information regarding plan activity produces an expected future benefit payment stream.

Projection results are useful in demonstrating changing relationships among key elements affecting system financial activity. For example, the relationship between annual benefits paid and assets will change over time. Projections are not predictions of specific future events and do not provide numeric precision in absolute terms. The future pension benefits shown in the table are estimates. Actual payments will likely differ from the amounts shown; however, understanding the relative growth is critical.

## Summary of Benefit Provisions

## Regular Retirement

Eligibility

Annual Amount

## Early Retirement

Eligibility
Annual Amount

## Deferred Retirement

Eligibility

## Annual Amount

## Disability Retirement

Regular Disability Benefit:

## Eligibility

Annual Amount

## Disability Retirement Benefit:

Eligibility

Annual Amount

Age 65 with ten years service or age 60 with 15 or more years of service or if age is at least 55 and the sum of age plus credited service is 85 or more.

State pension equal to total service times $1.1 \%$ of Average Annual Compensation.

Age 50 with 15 or more years of service.
State pension is computed as regular retirement benefit, but reduced for each month between age at early retirement and attainment of age 65. The age reduction factor is calculated as the sum of the following:

- $1 / 10$ of $1 \%$ for each month from age 60 to 65.
- $5 / 12$ of $1 \%$ for each month from age at early retirement to 60 .

Ten years of service. Benefit commences at regular or early retirement eligibility.

Computed as a regular retirement benefit with state pension based on service and Average Annual Compensation at termination.

Five years of service.
$\$ 125$ per month plus $\$ 5$ per month for each year of service credit over five years.

Five years of service and determined to be disabled by the Social Security Administration. Annual verification of Social Security disability is required.

Computed as a regular retirement benefit using creditable service to the date of disability and without reduction for early retirement. The minimum benefit is $\$ 180$ per month.

## Summary of Benefit Provisions

Death Before Retirement<br>Eligibility

Annual Amount
15 years of service. Spouse to whom member had been married for two or more years is automatically eligible, or a dependent may be designated as beneficiary.

Computed as regular retirement benefit but reduced in accordance with a $100 \%$ joint and survivor election.

## Benefit Increases After Retirement

No automatic increases after retirement are provided. Periodically, unscheduled increases have been made.

## Average Annual Compensation

Average of highest five years of compensation. Years do not need to be consecutive.

## Member Contributions

All Fund members are required by state law to contribute 3\% of salary contributions to their Annuity Savings Account. These 3\% contributions are generally "picked up" by the employer and contributed on a pre-tax basis on behalf of the employee. Extra voluntary contributions by the member are also possible, but on a post-tax basis. At retirement, there are six alternatives for receiving the proceeds of this account, including lump sums, full and partial rollovers, full and partial annuitization of the balance, and deferred distribution.

## Forms of Benefit Payment (Pension)

The normal form of benefit payment (Option A-1) is a single life annuity with a five-year certain period. There are five optional forms of payment available, as listed below. Additionally, members retiring between ages 50 and 62 may integrate their pension benefit with their Social Security benefit by choosing Social Security Integration (Option A-4) in conjunction with the normal form or any other optional form selected. Optional forms of payment are calculated on an actuarial equivalent basis.

Option A-2: $\quad$ Straight Life benefit with no certain period
Option A-3: Modified Cash Refund Annuity (operates in conjunction with the Annuity Savings Account)
Option B-1: 100\% Survivorship
Option B-2: 66 2/3\% Survivorship
Option B-3: $50 \%$ Survivorship
State law provides for actuarially-adjusted and re-calculated benefits based on a new optional form election in the event of the death of the member's spouse after retirement.

Optional forms of benefit are calculated based on $7.5 \%$ interest with a $40 \% / 60 \%$ unisex blend of the 1983 Group Annuity Male Mortality table set back three years and the 1983 Group Annuity Male Mortality table set back seven years.

## Summary of Actuarial Assumptions and Methods

Pay Increase Timing

## Decrement Timing

7.0\% per year, compounded annually (net after administrative expenses).

Sample increases are shown in a table on the following pages. The assumption for each consists of a merit and/or seniority increase, $3.0 \%$ for price inflation, and $0.25 \%$ for real wage growth.

Assumed to annually increase 10\% for the 1996 Account and decrease according to the projection in the Payout Projections section for the Pre-1996 Account for purposes of calculating the projected contribution for the 2012 fiscal year.
$3.0 \%$ per year. Price inflation is not directly tied to benefits; however, it is a component of the economic model used to determine total wage inflation.

2008 IRS Static Mortality Table projected an additional 5 years (sex specific).

2008 IRS Static Mortality Table projected an additional 5 years (sex specific).

Probabilities are shown in tables on the following pages.
Sample probabilities are shown in tables on the following pages.
Sample probabilities are shown in a table on the following pages.
Entry Age Normal (level percent of pay) method, with a 30 -year, closed, level dollar amortization of the Unfunded Accrued Liability arising from all sources including actuarial gains and losses.

The Actuarial Value of Assets recognizes investment gains and losses in equal installments over four years. However, the Actuarial Value is limited to no more than $20 \%$ greater than or $20 \%$ less than the Market Value of Assets. Investment experience on ASA account balances is not smoothed.
$100 \%$ of members are assumed to be married for purposes of valuing death-in-service benefits. Male spouses are assumed to be three years older than female spouses.

Beginning of (fiscal) year. Payroll amounts stated in the valuation data are amounts projected to be paid during the current year.

Decrements are assumed to occur at the beginning of the year.

## Summary of Actuarial Assumptions and Methods

| Other | Disability and withdrawal decrements do not operate after <br> member reaches retirement eligibility. Only the withdrawal and <br> death decrements operate during the first ten years of service. |
| :--- | :--- |
| Miscellaneous Adjustments | The calculated liabilities and normal costs were increased by $1 \%$ <br> to account for the inclusion of unused sick leave in the <br> calculation of Average Compensation. |
| Actuarial Equivalence Basis <br> for Optional Forms of Payment | 7.5\% interest with a 40\%/60\% unisex blend of the 1983 Group <br> Annuity Male Mortality table set back three years and the 1983 <br> Group Annuity Male Mortality Table set back seven years. |
| Explicit Expense Load | None. |
| COLA Assumption | 1.0\% compounded annually on pension portion. |
| Employee Census and Asset Data | Census and asset information was furnished as of the valuation <br> date by the Fund's Administrative Staff. Although examined <br> thoroughly for reasonableness and consistency with prior years, <br> the data was not otherwise audited by the Actuary. |

The actuarial valuation computations were made under the supervision of a Member of the American Academy of Actuaries (MAAA).

## Summary of Actuarial Assumptions and Methods

Accrued Liability

## Actuarial Assumptions

## Actuarial Cost Method

## Actuarial Equivalent

## Actuarial Gain (Loss)

## Actuarial Present Value

## Amortization

Normal Cost

## Unfunded Accrued Liability

Service credited under the system that was rendered before the date of the actuarial valuation.

The difference between the actuarial present value of future benefit payments and the actuarial present value of future normal costs. Also referred to as "actuarial accrued liability" or "past service liability".

Estimates of expected future experience with respect to rates of mortality, disability, turnover, retirement, rate of investment return, and pay increases. Decrement assumptions (rates of mortality, disability, turnover, and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (pay increases and investment return) consist of the underlying rates in an inflation-free environment plus a provision for a long-term average rate of inflation.

A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future benefit payments" between future normal costs and actuarial accrued liabilities. Sometimes referred to as the "actuarial funding method".

One series of payments is said to be actuarially equivalent to another series of payments if the two series have the same actuarial present value.

The difference between actual unfunded actuarial accrued liability and anticipated unfunded actuarial accrued liability during the period between two valuation dates. It is a measurement of the difference between actual and expected experience.

The single amount now that is equal to a payment or series of payments in the future. It is determined by discounting future payments at predetermined rates of interest and by probabilities of payment.

Paying off a present value with periodic payments.
The portion of the actuarial present value of future benefits that is assigned to the current year by the actuarial cost method. Sometimes referred to as "current cost".

The difference between the accrued liability and the actuarial value of assets. Sometimes referred to as "unfunded past service liability" or "unfunded actuarial accrued liability" or simply as "unfunded liability".

## The Actuarial Valuation Process

The actuarial valuation is the mathematical process by which a contribution rate is determined. The flow of activity constituting the valuation may be summarized as follows:

Covered Person Data: Furnished by the Plan Administrator
Retired Members and Beneficiaries Now Receiving Benefits
Former Employees with Vested Benefits Not Yet Payable
Active Members

+ Asset Data (Cash and Investments): Furnished by the Plan Administrator
+ Estimates of Future Experience (Actuarial Assumptions): Established by the Board of
Trustees after Consulting with the Actuary
+ Funding Method: The Allocation of Employer Costs to Past Service, Current Service, and Future Service
+ Mathematically Combining the Assumptions, the Funding Method, and the Data
= Determination of:
Plan Funded Status and Employer Contribution Rate

## Funding Objective

The funding objective of the ISTRF 1996 Account is to establish and receive contributions that, when invested at the assumed rate of return, will ultimately accumulate assets over each member's working lifetime that will be sufficient to pay expected retirement allowances.

## Fund Structure

The Indiana State Teachers' Retirement Fund (TRF) is one fund comprised of a two-account structure in compliance with Indiana Code Section 5-10.4-2-2:

1. The Pre-1996 Account consists of members who were hired prior to July 1,1995 , and who have maintained continuous employment with the same school corporation or covered institution since that date.
2. The 1996 Account consists of members who were:
a. hired on or after July 1, 1995; or
b. hired before July 1, 1995, and prior to June 30, 2005:
i. were either hired by another school corporation or institution covered by TRF, or
ii. were re-hired by a covered prior employer.

## Characteristics of the Pre-1996 Account

1. Active membership in the Pre-1996 Account continues to decline as members quit, become disabled, die, retire, or incur a change in status as described in (2.b.) above, thereby automatically transferring to membership in the 1996 Account.
2. The Defined Benefits from the Pre-1996 Account are funded by State appropriations (including contributions of some revenue from the State Lottery). At the time of retirement, Annuity Savings Account (ASA) benefits payable from the Pre-1996 Account are funded by the annuitization of Pre-1996 Account member contributions.

## Characteristics of the 1996 Account

1. As members depart from active service in the Pre-1996 Account, their replacements will become members of the 1996 Account. If the 1996 Account were a stand-alone plan, this pattern of departures and hirings would produce a fairly constant population size.
2. Defined Benefits payable from the 1996 Account are funded by contributions from local school corporations or other institutions that employ covered members. At the time of retirement, ASA benefits payable at retirement from the 1996 Account are funded by the annuitization of 1996 Account member contributions.

## Plan Structures and Funding Arrangements

## Funding Arrangements

Prior to the legislation that established the two-account structure of TRF, the Defined Benefits of the Indiana State Teachers' Retirement Fund were funded with a pay-as-you-go method. Under this arrangement, amounts were appropriated to meet the current year's pension payment requirements. Defined Benefits payable from the Pre-1996 Account continue to be funded on this basis.

In 1995, the Pension Stabilization Fund was set up for the Pre-1996 Account. Since then, some pre-funding progress has been made via State appropriations to this account.

Defined Benefits payable from the 1996 Account are funded through employer percent-of-pay contributions. The Board of the Teachers' Retirement Fund sets this contribution rate after reviewing the most recent actuarial valuation report.

The contribution rate of $7.50 \%$ for fiscal year 2011 was set by the Board in fiscal year 2010 for the 1996 Account. The contribution rate of $7.50 \%$ for fiscal year 2012 was set by the Board in fiscal year 2011.

[^0]:    * Actuarial Value of Assets is $113.18769 \%$ of Market Value of Assets and is allocated between actives/retirees and Pre-96/Post-96 in the same proportion as Market Value shown above.
