Board of Trustees Employees' Retirement System Of the City of Baltimore 7 East Redwood Street 12th Floor Baltimore, Maryland 21202-3470

Dear Members of the Board:

We are pleased to submit the June 30, 2016 actuarial valuation of the Employees' Retirement System of the City of Baltimore (the System). This report contains information on the System's assets and liabilities, as well as discloses employer contribution levels. Financial disclosures are provided in a separate Governmental Accounting Standards Board (GASB) Statement Nos. 67 and 68 report.

The purpose of this report is to present the annual actuarial valuation of the Employees' Retirement System of the City of Baltimore. This report is for the use of the Employees' Retirement System's Retirement Board and its auditors in preparing financial reports in accordance with applicable law and accounting requirements.

To the best of our knowledge, this report and its contents have been prepared in accordance with accepted actuarial principles and practices which are consistent with the Code of Professional Conduct and applicable Actuarial Standards of Practice set out by the Actuarial Standards Board. Furthermore, as credentialed actuaries, we meet the Qualification Standards of the American Academy of Actuaries to render the opinion contained in this report. This report does not address any contractual or legal issues. We are not attorneys, and our firm does not provide any legal services or advice.

This report was prepared solely for the Employees' Retirement System of the City of Baltimore for the purposes described herein. This valuation report is not intended to benefit any third party, and Cheiron assumes no duty or liability to any such party.

Sincerely, Cheiron

IcaG.

Kenneth Kent, FSA, FCA, MAAA Principal Consulting Actuary

Anu Patel, FSA, MAAA Principal Consulting Actuary

FOREWORD

Cheiron is pleased to provide the annual actuarial valuation report of the **Employees' Retirement System of the City of Baltimore** as of June 30, 2016. The purpose of this report is to:

- 1) measure and disclose, as of the valuation date, the financial condition of the System,
- 2) report on past and expected financial trends,
- 3) **determine** the recommended contributions for FYE 2018, and
- 4) **provide specific information** and documentation to support the City's funding obligation and information required by the auditors of the System.

An actuarial valuation establishes and analyzes the System assets and liabilities on a consistent basis, and traces the progress of both from one year to the next. It includes measurement of the System's investment performance as well as an analysis of actuarial liability gains and losses. This valuation report is organized as follows:

Section I presents a summary of the valuation and compares this year's results to last year's results.

Section II contains exhibits relating to the valuation of assets.

Section III shows the various measures of liabilities and presents an analysis of the experience gains and losses over the past year and the source of changes to the unfunded actuarial accrued liability.

Section IV develops the City contribution rate determined using actuarial techniques.

The appendices to this report contain a summary of the System's membership at the valuation date, a summary of the major provisions of the System, and the actuarial methods and assumptions used in the valuation.

In preparing our report, we relied on information (some oral and some written) supplied by the System's staff. This information includes, but is not limited to, plan provisions, employee data, and financial information. We performed an informal examination of the obvious characteristics of the data for reasonableness and consistency in accordance with Actuarial Standard of Practice No. 23 Data Quality.

The actuarial assumptions reflect our understanding of the likely future experience of the System and represent our best estimate, in cooperation with the Board's views, for the future experience of the System. The results of this report are dependent upon future experience conforming to these assumptions. To the extent that future experience deviates from the actuarial assumptions, the true cost of the Plan could vary from our results.

FOREWORD

The employers' annual contributions to this System are determined as the sum of the net normal cost, reflecting a provision for administrative expenses, and an amortization of the System's unfunded actuarial liability. The employer contribution rate will change when benefits are modified or assumptions are changed. The rate also changes in response to actuarial gains and losses on either the assets or the liabilities of the System. This report was prepared using census data and financial information as of July 1, 2016 as provided to us by the System and does not reflect any subsequent changes in the membership or assets.

SECTION I SUMMARY

The key results of the June 30, 2016 actuarial valuation are as follows:

- Investments earned 2.68% on a market value basis. The expected rate of return is defined by the definition of *regular interest* in the City Code, which for the year ending June 30, 2016 is 6.55% for participant liability in pay status and 7.75% for all other liabilities. For comparing the actual return, we determined a liability weighted expected return (taking the regular interest times a ratio of the respective present value of benefits for active and deferred vested participants versus participants in pay status over the total present value of benefits of the System) which results in a blended expected discount rate this year of 7.07%.
- The actuarial asset value return was 6.10%, which produced a net loss of \$29.2 million to the Plan this year when measured against the expected asset return of 7.75%.
- The System's regular interest rates for valuation purposes were decreased for actives from 7.75% to 7.50% and for inactives from 6.55% to 6.50%. This assumption change resulted in a \$20.9 million increase in the liabilities. The blended expected discount rate for this year after reflecting this change is 6.94%.
- The unfunded actuarial liability increased from \$637.46 million on June 30, 2015 to \$670.38 million on June 30, 2016. This increase is primarily attributable to the asset loss of \$29.2 million (based on actuarial assets) and a liability loss of \$6.9 million and \$20.9 million assumption change. Details of the gains and losses are presented in detail in Section III of this report.
- The System's funded ratio, which is the ratio of actuarial asset value to actuarial liability, decreased from 71.7% last year to 71.2% this year.
- The total recommended contribution increased by \$3.07 million from \$84,474,449 for FYE 2017 to \$87,541,882 for FYE 2018 due to the experience losses, assumption changes, and offset by the final year phase in of expected employee contribution to 5.0%. This represents an increase in cost as a percent of pay from 20.70% to 21.91%.
- The funding policy adopted by the Board provides for the unfunded actuarial liability to be amortized over a fixed period of 20 years targeting 100% funding by the fiscal year ending 2032. As of the current valuation, the remaining amortization period is 15 years.
- Employees hired or rehired after July 1, 2014 are now covered under a new Class D membership if they elect the "hybrid" plan option at time of employment. New employees will have the option to participate in both the Employees' Retirement System and the new Retirement Savings Plan (RSP) as hybrid members or opt out of the System and participate only in the RSP as non-hybrid members. Due to the one-year waiting period for Class D membership eligibility, this was the first year there were Class D members in the System. There are 360 Class D members out of total active membership of 8,274, representing 4.4% of the total active members in the System.

SECTION I SUMMARY

The tables below provide details on the development of the FYE 2018 contribution results, unfunded actuarial liabilities, and statistics on Plan membership. The total lump sum costs determined as payable at the beginning of the fiscal year reflect the offset of expected member contributions.

Val	Table uation S	i I-1 Summary

*Benefit amounts for 3 vested participants were not provided; we assumed a monthly benefit of \$696.

SECTION I SUMMARY

Historical Trends

It is important to take a step back from these latest results and view them in the context of the System's recent history. Below, we present a series of charts which display key factors in the valuations of the last 10 years.

Assets and Liabilities

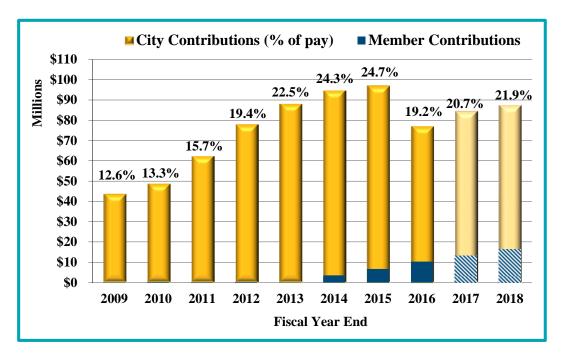

The chart above shows historical trends since 2007 for the market and actuarial value of assets compared to the actuarial liability. The actuarial asset value reflects the market value plus one-fifth of the aggregate investment earnings above or below the expected return. We also show the progress of the Retirement System's funded ratios (ratio of actuarial assets over actuarial liabilities) provided along the top of each bar. The System had its highest funded percentage during this decade (91%) on July 1, 2007. After the impact of the market decline in 2008, the System experienced marked lower funded ratios. The deferred investment losses are partially recognized and further offset by investment gains resulting in the actuarial assets being almost equal to the market assets in 2014. Since then the actuarial value of assets has been higher than the market value of assets as there are deferred losses that will be recognized over the next few years. The increase in liability as of July 1, 2012 was mainly due to the change to the Entry Age Normal Cost funding method. In 2016 the funded ratio declined due to the decrease in the regular interest rate assumption along with experience losses.

SECTION I SUMMARY

Contribution Rates

This graph shows the historical trends for the actuarially calculated contributions (including City and member contributions) and net City contribution rate as a percent of payroll, shown above each bar. Because there is a one-year lag in the determination of the City contributions, we show the actual contributions made through FYE 2016 and estimated amounts for FYE 2017 and FYE 2018.

The increasing costs from 2010 to 2015 are a reflection of an increasing unfunded actuarial liability in part due to investment losses. The percentages above the bars shows the City contribution rate net of member contributions as a percent of pay. The City contribution rate drops for FYE 2016 mainly due to the one-time credit applied for contributions already made by the City in excess of the required amounts due to the member contribution offset. Member contributions offset the City's cost. For FYE 2014 they start at 1% of pay increasing by 1% each year until they will reach 5% of pay in FYE 2018.

Participant Trends

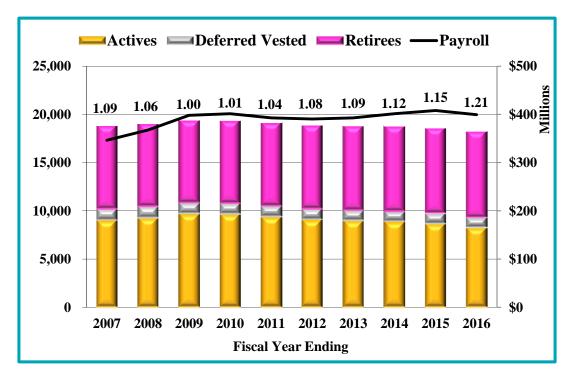

The chart below shows the membership counts of the System at successive valuations. The numbers which appear above each bar represent the ratio of the number of inactive members to active members at each valuation date. The number of inactives per each active has been steadily increasing since 2009 representing the System's maturity.

The black line represents the total covered payroll over the period, and it corresponds with the scale on the right. Payroll has remained fairly level from 2009 to 2015 declining in 2016. The

SECTION I SUMMARY

ratio of inactive to active participants as of the current valuation is 1.21. The implications of this ratio are that the unfunded liabilities, which represent the System overall, is funded as a percent of active participant payroll. Therefore the costs as a percent of payroll will be more volatile for a plan with a ratio of inactive to active participants greater than 1.

SECTION I SUMMARY

Base Line Projections

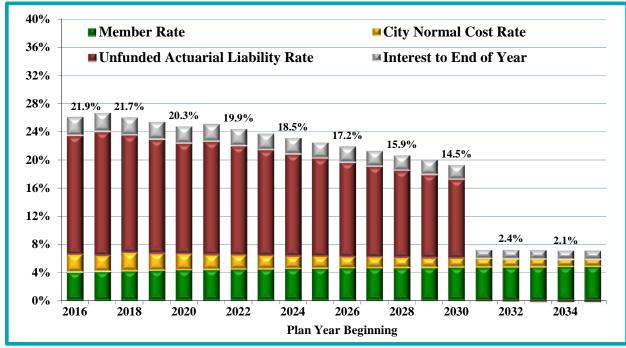

The chart on this page shows the expected progress of the System's funded status over the next 20 years measured in terms of the City's contribution rate and the funded ratio assuming the long-term return rate of 7.50%. This projection reflects the changes in plan membership. All new members participate at a lower benefit formula and contribute at 5.0% of pay under Class D membership.

The projections assume there will be no future gains or losses on the liability. These projections are also based on assuming all of the valuation assumptions are exactly met, including the long-term rate of return and covered payroll increasing by the inflation assumption of 3.50% per year. The projections also reflect the change in Regular interest rate from 7.50% to 7.00% effective with the July 1, 2018 valuation.

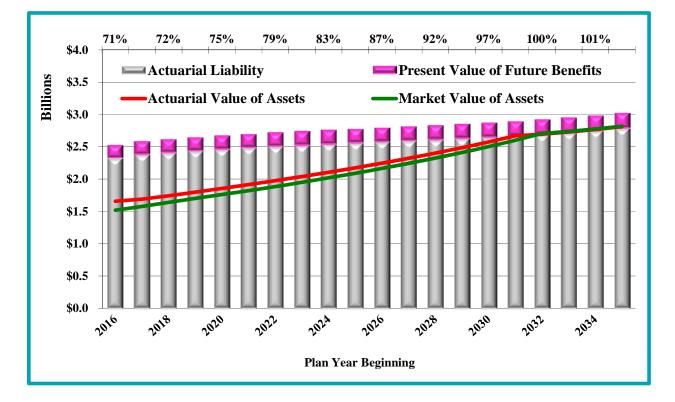

The first chart below shows the expected member contribution rate, the normal cost rate, the rate of pay amortization of the unfunded actuarial liability (UAL) rate, and the net City's total contribution rate (numbers on the top of the bars). The City's total cost as a percent of payroll is projected to decrease steadily over the projection period as a function of the funding policy which pays the unfunded liability over a fixed period resulting in level dollar amortization payments along with an increasing proportion of active membership under the lower net cost Plan D. The cost eventually drops to around 1.5% when the unfunded liability is fully paid off and the majority of remaining active members are expected to be covered as Class D members. The 5.0% contribution rate for Class D members is expected to cover most of the normal cost rate, the cost of the annual benefit accrual with the balance of the cost to cover the cost of administrative expenses. Therefore the City's net cost will trend toward 1.5% as Class C members retire. The increase in cost in year 2021 is due to the ending of the Ordinance 01-189 normal cost adjustment.

SECTION I SUMMARY

The next chart compares Assets and Liabilities and shows that if all actuarial assumptions are exactly met, the Plan's funded ratio shown along the top of the graph is projected to improve gradually from the current level of 71% to 100% funding in 15 years by 2031.

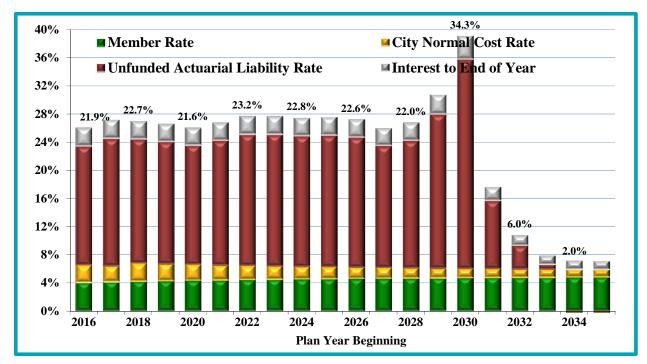

SECTION I SUMMARY

This pattern of funded status improvement is a function of the funding policy to amortize the UAL over a fixed 20-year period from 2011. The financial experience of the System will not conform exactly to the assumptions every year. As a result, in addition to the baseline projection, we provided additional stress testing based on varying returns in the future. The next two graphs show the same information as above but reflect the fact that the 7.00% investment return is not likely to actually occur each year but represents an average of more volatile returns. They are based on projected returns that while volatile produce the same average 7.04% (7.50% for two years and 7.00% thereafter) return based on the following table.

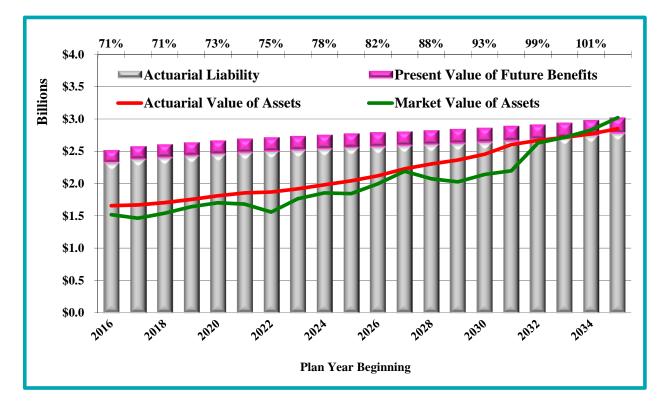

2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028
0.00%	9.00%	10.00%	7.00%	2.00%	-4.00%	17.00%	8.00%	2.00%	11.00%	12.00%	-3.50%	0.00%
			D									
2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041
7.50%	3.00%	17.00%	6.50%	9.00%	12.00%	4.50%	7.00%	4.50%	9.50%	6.00%	12.00%	18.00%

This graph above shows the nature of the fixed amortization period and the potential for cost volatility as the Plan gets closer to the target date for full funding. By the year 2031, the entire unfunded actuarial liability is being recognized in the one-year period remaining of the total amortization period. It is anticipated that as that date gets closer and based on plan experience additional measures may be considered to address cost volatility. However for the balance of the years leading up to 2031, the costs are relatively stable given the return volatility illustrated. This is a function of the asset smoothing.

SECTION I SUMMARY

This presents a realistic view of the potential volatility of the System and highlights the long-term implications of the funding and funded status risks from market volatility.

SECTION II ASSETS

The assets below are based on unaudited financial data furnished by the Retirement System's Office. The change in market value of assets during the valuation year ending June 30, 2016 is summarized below.

Table II-1									
Assets of the Plan as of June 30, 2016									
	Tota	ll Market Value							
Fund Balance on June 30, 2015	\$	1,531,934,267							
Contributions									
Member	\$	10,350,709							
Member purchase service	\$	0							
City/State	\$	77,100,573							
Net Investment Income									
Interest, dividends, securities lending income									
and realized capital gains	\$	48,960,450							
Unrealized gains (losses)		437,788							
Expenses		(9,138,196)							
Total Investment Income	\$	40,260,042							
Administrative expenses	\$	(3,515,492)							
Payments of benefit & refunds	\$	(139,197,716)							
Fund Balance on June 30, 2016	\$	1,516,932,382							

SECTION II ASSETS

The chart below shows the calculation of investment gains and losses. On a market value basis, the Plan earned a 2.68% return amounting to total investment income of \$40,260,042 during FY 2015-2016. Because the liabilities (Present Value of Future Benefits shown as PVFB in the table below) are valued using different discount rates for actives and terminated vested participants versus retirees, we allocate this return over the actuarial liabilities of active and inactive participants separately. The investment loss on a market basis related to the inactive liabilities using the expected return rate of 6.55% was \$58.2 million. The investment loss on a market basis related to the active liabilities using the expected return rate of 7.75% was \$76.3 million. Combining these two losses in relation to the portion of funds in each group, results in a net System asset loss over the assumptions on a market value basis of \$66.2 million.

Table II-2 Development of Investment Gain / (Loss)		
1. Market Value of assets as of June 30, 2015	\$	1,531,934,267
2. Market Value of assets as of June 30, 2016	\$	1,516,932,382
3. Earnings during June 30, 2015 to June 30, 2016 (including investment expenses)	\$	40,260,042
4. Mean Assets [Half of ((1.) + (2.) - (3.))]	\$	1,504,303,304
5. Investment return 2015-2016 $[(3.) \div (4.)]$		2.68%
 6. Investment gain / (loss) a. Relative to 6.55%: [(5.) - 6.55%] x (4.) b. Relative to 7.75%: [(5.) - 7.75%] x (4.) 	\$ \$	(58,216,538) (76,268,177)
 7. Funds as a portion of market value of assets a. Retired PVFB/Total PVFB b. (Total PVFB - Retired PVFB)/Total PVFB c. Total: (a) + (b) 		0.55756 0.44244 1.00000
 8. Total investment gain / (loss) a. Retired: (6a.) x (7a.) b. Active: (6b.) x (7b.) c. Total Investment Gain / (Loss): (a) + (b) 	\$ \$ \$	(32,459,388) (33,743,862) (66,203,250)

The investment gains for FYE 2016 are taken together with past experience to determine an actuarial asset value for determining the City's contribution obligations.

SECTION II ASSETS

The table below shows the development of the unallocated earnings which represent the earnings above and below the valuation interest assumption. The excess earnings are calculated by the "asset averaging method" from Article 22(7) (b) of the Baltimore City Code. This method uses one-fifth of the excess earnings for the year to adjust the unfunded actuarial liability in the current year. The other four-fifths of the excess earnings are used to smooth investment experience. The unrecognized deferred earnings increased from a deficit of \$4,087,820 to a deficit of \$56,232,856, a change in net unallocated accumulated earnings of \$52,145,036 as of June 30, 2016. This net deficit is gradually recognized in the future actuarial value of assets and impacts future contributions to the System. However, future investment gains/(losses) may ameliorate/(exacerbate) this recognizion.

Table II-3 Development of Unallocated Earnings									
The development of current unallocated excess/(deficit) earnings over the most recent two years is as follows:									
		Valuatio	on Da	ite					
		6/30/2015		6/30/2016					
1. Remaining net excess earnings from prior valuation	\$	36,964,310	\$	(4,087,820)					
2. New investment gain/(loss)		(42,074,085)		(66,203,250)					
3. Current net excess earnings $(1) + (2)$	\$	(5,109,775)	\$	(70,291,070)					
4. One-fifth (credit) charge $(3)/(5)$		1,021,955		14,058,214					
5. Net unallocated excess/(deficit) earnings $(3) + (4) = (5)$	\$	(4,087,820)	\$	(56,232,856)					

SECTION II ASSETS

The table below shows the calculation of the actuarial value of assets. The assets are smoothed using the unallocated earnings calculation. Additionally, the actuarial value of assets is offset by the Normal Cost Reserve from Plan Change.

Table II-4 Actuarial Value of Assets									
The actuarial value of assets used to calculate the unfunded actuarial liability is developed as follows:									
1. Assets in the Fund on June 30, 2016	\$	1,516,932,382							
2. Net deferred recognition of unallocated excess/(deficit) earnings	\$	(56,232,856)							
3. Normal Cost Reserve from plan change	\$	(15,092,282) *							
4. Present value of prior year's contributions not yet paid	\$	99,114,792							
5. Preliminary actuarial value of assets on June 30, $2016(1) - (2) + (3) + (4)$	\$	1,657,187,748 **							
6. Corridor testing: 80% of market value assets \$ 1,213,545,906 120% of market value assets \$ 1,820,318,858									
7. Final actuarial value of assets on June 30, 2016	\$	1,657,187,748							
8. Ratio of actuarial asset value to adjusted market asset value		103.5%							

* A reserve from the 6/30/2000 accumulated net excess earnings was established to pay the assumed increase in normal cost due to the Ordinance 01-189 improvements.

** The actuarial value of assets represents 109.2% of the market value which is up from the same measurement last year of 101.8%.

On actuarial asset value, due to the continued gradual recognition of prior year's investment losses, the rate of return is below expectation with an asset rate of return for the year of 6.10%, which is compared to the expected investment return of 7.75% for the prior year. As of June 30, 2016, previous investment losses are partially being recognized and further offset by investment gains which are being deferred for recognition in the future.

SECTION II ASSETS

The table below shows the schedule of the Normal Cost Reserve from Plan Changes. This schedule was established during the 2001 valuation year as a means of funding a benefit enhancement by reserving the full amount of the cost at a time when the actuarial asset value exceeded the liabilities. The Normal Cost Reserve, which reflects the unamortized balance, is taken out of the actuarial value of assets until valuation year 2020, at which time, the Plan changes will be fully amortized.

	Table II-5 Normal Cost Reserve from Pla	an Change
<u>June 30,</u>	Additional <u>Normal Cost</u>	Normal Cost <u>Reserve</u>
2001	\$ 1,835,000	\$ 26,256,000

SECTION III LIABILITIES AND EXPERIENCE GAINS/(LOSSES)

The table below presents the actuarial liabilities by membership status and employer, and then allocates the assets in proportion to each employer's liabilities, to produce the unfunded actuarial liability by employer. These liabilities are for funding purposes and are not appropriate for measuring the cost of settling Plan liabilities by purchasing annuities or paying lump sums. On the following page, this unfunded liability is amortized over the remaining years, and that amount is then added to the Net Normal Cost (cost to cover the upcoming year's expected accruals less member contributions) with the administrative expenses to produce the recommended employer contributions.

SECTION III LIABILITIES AND EXPERIENCE GAINS/(LOSSES)

This next table presents the change in actuarial liabilities, actuarial assets and unfunded liability during the plan year. In general, the unfunded actuarial liability (UAL) of any retirement system is expected to change at each subsequent valuation for a variety of reasons. In each valuation, we report on those elements of change in the UAL which are of particular significance, potentially affecting the long-term financial outlook of the System. Below, we present key changes in liabilities and assets since the last valuation.

SECTION IV CONTRIBUTIONS

This table presents the components that make up the costs by employer including the normal cost reflective of the value of the benefits earned during the year, employee contributions for members under Class A, Class C, and Class D membership, the proportional shares of the amortization cost to pay off the unfunded actuarial liability, and the special credit normal cost defined in Ordinance 01-189, all brought forward with interest for the one-year delay in funding to the next fiscal year beginning. Under the current funding policy, the unfunded actuarial liability is amortized over a fixed period of 20 years starting from fiscal year beginning 2011. As of the current valuation, the remaining amortization period is 15 years.

APPENDIX A PLAN MEMBERSHIP

The data for this valuation was provided electronically in Excel by the Retirement System Office. Cheiron did not audit any of the data; however the data was reviewed to ensure that it complies with generally accepted actuarial standards. The data for active and inactive participants is as of June 30, 2016. Where data elements may be missing such as dates of hire, dates of birth, and benefit accrual level, we make assumptions to fill-in the blanks. The assumed values (if applicable) are included in Appendix B.

The following pages contain a summary of the data provided.

- Reconciliation of participants as of June 30, 2016
- Age/service and age/salary/service distribution for active members as of June 30, 2016
- Counts and average benefit amount by age for retirees, beneficiaries and disabled members as of June 30, 2016

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

Entry Age Normal Method

Liabilities and contributions shown in this report are computed using the Entry Age Normal method of funding. Under this method, the normal cost is computed as the level annual percentage of pay required to fund the retirement benefits between each member's date of hire and assumed retirement.

A description of the calculation follows:

The normal cost is based upon the normal cost rate determined by taking the value, as of entry age into the plan, of each member's projected future benefits. This value is then divided by the value, also at entry age, of each member's expected future salary producing a normal cost rate that should remain relatively constant over a participant's career. The normal cost rate is multiplied by current salary to determine each member's normal cost. Finally, the normal cost is reduced by the member contribution to produce the employer normal cost.

The actuarial liability is the difference between the present value of future benefits and the present value of future normal costs. The unfunded actuarial liability is the difference between the actuarial liability and the actuarial value of assets.

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

Actuarial Assumptions and Methods

Method of Funding:		e Entry Age Normal Funding Method was approved by the ard of Trustees effective 7/1/2012.					
	The current unfunded actuarial liability is amortized as a level dollar over 20 years. The 20-year period decreases each year from 2011 until 2031, at which time the unfunded liability will be fully paid.						
Asset Valuation:	for	e actuarial value of assets is equal to the market value, adjusted 20% of the five-year aggregate investment surpluses and ficits. This calculation is done in the following steps:					
	1.	The investment gain or loss for the current year is calculated; this equals the actual investment earnings during the year minus the expected earnings. Expected earnings are calculated using a weighted average of the pre- and post-retirement interest rate assumptions multiplied by the mean market value of assets during the year.					
	2.	The current net excess earnings are computed by adding the investment gain or loss for the current year to the remaining excess earnings for the prior valuation. One-fifth of the excess earnings are recognized in the actuarial value as of the current valuation and four-fifths are deferred to future years.					
	3.	The net assets are then adjusted to account for the Normal Cost Reserve held for the plan changes made during 2001.					
	4.	The present value of the prior year's City contributions is added to the net assets to account for the one-year lag between required contributions and when the contributions are actually received.					
	5.	The actuarial value of assets will not be greater than 120% nor less than 80% of the market value of assets as of the valuation date.					

All actuarial assumptions are subject to Board of Trustees approval with changes typically addressed following each five-year experience study and following the recommendation of the actuary. The last experience study was performed in 2015 based on 2010 through 2014 experience analysis. The rationale for these assumptions can be found in the experience study report.

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

Discount Rate:	A liability weighted discount rate is expected on the basis that a 7.50% rate is applied in measuring active and terminated vested participant liabilities, and a 6.50% rate is applied for measuring retiree participant liabilities. The weighted discount rate this year is 6.94%.
Investment Return:	The investment return assumption is 7.50% net of investment expenses effective July 1, 2016. This assumption is defined by City Code based on the definition of <i>Regular Interest</i> , which has been amended from time to time based on the advice of the actuary and investment consultant and recommendation of the Board of Trustees in the form of an amendment to the City Code from time to time.
Social Security Wage Base:	3.00% per year compounded annually

Inflation: 2.65% (effective 6/30/2015)

Salary Increases: Salary increases are assumed to vary with age. Sample rates are as follows:

Age	Salary
20	0.063
25	0.058
30	0.053
35	0.047
40	0.041
45	0.037
50	0.035
55	0.035
60	0.035
65	0.035
69	0.035

Cost-of-Living Adjustment Assumption:	1.5% for inactives in pay status under age 65 and 2.0% over age 65		
Percent Married:	Males 90%, females 80%		
Spouse Age:	A husband is assumed to be four years older than his wife.		
Remarriage Rates:	None		

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

Expenses:	Administrative expenses are expected to be equal to the prior years' actual expenses rounded up to the next hundred thousand dollars and added as part of the annual normal cost for the year. For June 20, 2016 the assumed administrative expenses were \$3,600,000.
	Investment expenses are assumed to be paid out of investment earnings.
Job Elimination Benefit:	A liability load of 1.75% is applied to active retirement benefits to account for the value of this benefit.
New Entrant Assumption:	A liability load of 0.5% is applied to active benefits to account for future new entrants who may have previous years of service restored or transferred into the System (effective 6/30/2015).

* Rates for individuals who are the age shown as of June 30, 2016

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

Post-Retirement Mortality: 1. Retirees and Beneficiaries - RP 2000 Healthy Mortality with projections using 50% of the AA scale projected 15 years with a two-year set forward for both males and females. Given the requirement for experience studies performance every five years, these projections are sufficient until the next measurement period.

2. Disabled members - RP 2000 Disabled Mortality with generational projections using 50% of the AA scale projected 15 years with a four-year set forward for both males and females.

Sample rates (rates first effective 6/30/2015).

	Retirees and Beneficiaries*		Disabled Members

		70	1.00	1.00	1.00	
	30 years of service). Normal Retirement is assumed on or after the later of age 60 and eligibility for Normal Retirement (earlier of age 65 with five years of service and 30 years of service).					
	Terminated	nated vested participants are assumed to retire at age 65.				
Joint and Survivor Forms of Payment:	The 40% Joint & Survivor form of payment is assumed for all benefits. All benefits with Joint & Survivor Forms of Payment for retirees had their survivor benefits increased by 4% to account for children's benefits.					
Data Assumptions:	For participants with a Joint and Survivor benefit who were missing spouse dates of birth, we assumed that the male is four years older than the female.					
Justification for Assumptions:	The actuarial assumptions were adopted by the Retirement Board, based upon the alternatives presented in the 2014 experience study report conducted on the System's experience from the 2010-2014					

Service Retirement:

APPENDIX B ACTUARIAL ASSUMPTIONS AND METHODS

valuations. The results of this study were presented in August 2015 and are incorporated into this report by reference.

Changes Since Last Valuation:

The liability weighted discount rate applied in measuring active and terminated vested participant liabilities decreased from 7.75% to 7.50%, and the rate applied for measuring retiree participant liabilities decreased from 6.55% to 6.50%.

The administrative expense assumption was changed from \$3.8 million to \$3.6 million to reflect actual experience.

APPENDIX C SUMMARY OF PLAN PROVISIONS

Effective Date

The System was effective January 1, 1926 and has been periodically amended.

<u>Eligibility</u>

Any regular and permanent officer, agent, or employee of the City with the exception of those required to join the Maryland State or any other Retirement System shall become a Class D member of the Employees' Retirement System upon completion of one year of service. The Board of Estimates may authorize prospective membership for any class of part-time employees. There are four classes of members as follows:

- <u>Class A</u> Members who were hired before July 1, 1979, and entered membership on or after January 1, 1954, or who elected, prior to April 1, 1954, to contribute at the higher Class A rate. Any Class B member may elect to become a Class A member by bringing his accumulated contributions and interest up to what they would be if he had elected Class A membership on January 1, 1954.
- 2. <u>Class B</u> Members as of January 1, 1954 who did not elect Class A membership there are no remaining active Class B participants as of June 30, 2011.
- 3. <u>Class C</u> Members who were hired on or after July 1, 1979 and before July 1, 2014, or any other members who may have elected to transfer during various open transfer periods.
- 4. <u>Class D</u> Members who were hired or rehired on or after July 1, 2014. Class D Members have the option to participate in both the Employees' Retirement System and the new Retirement Savings Plan (RSP) as hybrid members or opt out of the System and participate only in the RSP as non-hybrid members. The City contributes 3% of pay to RSP for hybrid members and 4% of pay for non-hybrid members. Members also have the option to make voluntary deferrals to the City's Deferred Compensation Plan, with the City matching 50% of the first 2% of compensation deferred by the member.

Member Contributions

Class A and Class B members currently contribute at the rate of 4% of earnable compensation, and contributions are not required upon attaining age 60 and completing 35 years of service. Class C members (except participants of Detention Services and Department of Education) began making contributions at 1.0% of compensation starting July 1, 2013 increasing 1.0% each year until they reach 5.0% of compensation. Class D members make contributions at 5.0% of pay from date of participation. Interest is credited on contributions at a rate of 5.25% per annum for Class A and B members and 3.00% for Class C and Class D members.

APPENDIX C SUMMARY OF PLAN PROVISIONS

Compensation

Earnable compensation is the annual salary authorized for the member, not including overtime, differential pay, environmental pay, hazardous duty pay, pay for conversion of leave or other fringe benefits, or any additional payment. Average Final Compensation is the average of the member's annual earnable compensation on January 1 for the three successive years of service when the member's earnable compensation is the highest or, if the member is in service on January 1 for less than three successive years, than the average during total service.

Covered Compensation

The covered compensation (for Class C only) is the average of the FICA wage base for the 35year period ending with the calendar year which ends immediately prior to the earlier of: (1) January 1, employment, or (2) January 1, of the calendar year in which the member attains age 65.

Military Service Credit

A. Military Service Prior to Employment:

1. Classes A and B

A maximum of three years' service credit is granted provided the member has acquired 10 years of service and has reached the age of 60 or has acquired 20 years of service, regardless of age.

2. <u>Classes C and D</u>

A maximum of three years' service credit is granted provided the member has acquired 10 years of service and has reached the age of 62 or has acquired 20 years of service, regardless of age.

B. Military Service Within Employment:

1. Classes A and B

Upon retirement or death, any member who, because of military duty, had a break in employment shall receive service credit for the period of absence as provided by the Veterans' Reemployment Rights Act.

Retirement Eligibility

- A. Service Retirement:
 - 1. <u>Classes A and B</u> Age 60 with five years of service or 30 years of membership service.
 - <u>Classes C and D</u> Age 65 with five years of service or 30 years of service, regardless of age. Early retirement allowed at age 55 with five years of service payable at age 65 or reduced for payment before 65.

APPENDIX C SUMMARY OF PLAN PROVISIONS

B. Non-Line-of-Duty Disability Retirement:

Five years of membership service and determined by a hearing examiner to be mentally or physically incapacitated for the performance of duty and that incapacity is likely to be permanent.

C. Line-of-Duty Disability Retirement:

Totally and permanently incapacitated for duty as the result of an accident while in performance of duty and certified by a hearing examiner as mentally or physically incapacitated for the performance of duty and that such incapacity is likely to be permanent.

- D. Dismemberment Disability Retirement:
 - 1. <u>Classes C and D</u> Loss of any two or more of hands, feet, sight of eye(s) as a direct result of bodily injury from an accident while in actual performance of duty as determined by a hearing examiner.

Termination of Employment

- 1. Classes A and B
 - a. Eligible for Termination Retirement Allowance, deferred to age 60, upon completion of (1) 15 years of membership service, or (2) five years of service, if removed from a position without fault.
 - b. Eligible for a Termination Retirement Allowance, payable immediately, upon completing 20 years of service, if removed from a position without fault.
 - c. Eligible for a refund of accumulated contributions if not eligible for any other benefits.
- 2. <u>Classes C and D</u>
 - a. Eligible for a Termination Retirement Allowance, deferred to age 65, upon completion of (1) 10 years of service, or (2) five years of service, if removed from a position without fault.
 - b. Eligible for an immediate benefit if removed without fault after 20 years of service.

Retirement Allowances

- A. Service Retirement:
 - 1. Classes A and B

The sum of:

- a. An annuity of the actuarial equivalent of a member's accumulated contributions; and
- b. A pension, which together with the annuity shall equal 1.935% (Class A) or 1.785% (Class B) of Average Final Compensation times years of service.

APPENDIX C SUMMARY OF PLAN PROVISIONS

2. Class C

A pension of (1) 1.60% of Average Final Compensation, times years of service up to 30 years, plus (2) 0.25% of Average Final Compensation in excess of Covered Compensation, times years of service up to 30 years, plus (3) 1.85% of Average Final Compensation, times years of service in excess of 30 years.

3. Class D

A pension of 1.00% of Average Final Compensation, times years of service. If the member retires at or after age 62 with at least 20 years of service, the member receives an enhanced benefit of 1.10% of Average Final Compensation times years of service.

B. Early Retirement:

1. Classes C and D

If a member is age 55 with five years of service, the member may retire at any time, with a benefit reduced for early commencement. The reduction factor is 1/180 for each of the first 60 months prior to age 65 and 1/360 for each additional month preceding age 65. If the member has 30 years of service at retirement, then there is no reduction factor applied to the benefit.

C. Non-Line-of-Duty Disability Retirement:

1. Classes A and B

A benefit equal to the service retirement benefit if age 60; otherwise, an annuity of the actuarial equivalent of a member's accumulated contributions plus a pension which, together with the annuity, shall equal 1.90% (Class A) or 1.75% (Class B) of Average Final Compensation times years of service.

The member will receive the benefit as calculated above, if the benefit exceeds 25% of the member's Average Final Compensation. Otherwise, the member shall receive 25% of the member's Average Final Compensation.

This benefit is offset by:

- a. Workers' compensation (excluding amounts paid to third parties);
- b. Earnings in excess of base amount (current earnable compensation in same job grade and step adjusted for longevity) with a \$1.00 reduction for each \$2.00 of the first \$5,000 of excess and a \$2.00 reduction for each \$5.00 of additional excess earnings.

2. <u>Classes C and D</u>

The ordinary disability pension shall be equal to the greater of:

- a. The member's accrued service retirement benefit; or
- b. 15% of the member's average final compensation.

This benefit is offset by:

- a. Workers' compensation (excluding amounts paid to third parties);
- b. Unemployment compensation.

APPENDIX C SUMMARY OF PLAN PROVISIONS

D. Line-of-Duty Disability Retirement:

An annuity of the actuarial equivalent of a member's accumulated contributions, plus a pension equal to 66-2/3% of Average Final Compensation.

This benefit is offset by: Same offsets are applied as for non-line of duty disability.

- E. Dismemberment Disability Retirement:
 - 1. Classes C and D

A pension, equal to 100% of Average Final Compensation. Same offsets as for Class C Line-of-Duty Disability benefits.

- F. Termination Retirement Allowance (Deferred Payment): Determined the same as for Service Retirement, but based on membership service and Average Final Compensation at the time of termination.
- G. Termination Retirement Allowance (Immediate Payment): Determined the same as if the member had retired with a non-line-of-duty retirement allowance.
- H. Job Removal Retirement Benefit (Immediate Payment): Unreduced retirement benefit based on actual years of service credit is provided to any member who is removed from a permanent position without fault, provided they had 20 years of service.

Option Methods of Receiving Benefit Payments

- A. Maximum Service Retirement: Joint & Survivor form of payment to unmarried spouse or dependent children until the last marries, dies or attains age 18 (age 22 if a full-time student). The percent continued to the spouse is 40%.
- B. Cash refund to retiree's beneficiary based on present value of allowance at retirement less payments made.
- C. Joint and 100% to Contingent Beneficiary
- D. Joint and 50% to Contingent Beneficiary
- E. Some other periodic benefit subject to the approval of the Board of Trustees

APPENDIX C SUMMARY OF PLAN PROVISIONS

These options are available for service, termination, non-line-of-duty disability and line-ofduty disability retirement. Any option and/or beneficiary may be changed by the retired member within 30 days after retirement.

Non-Line-of-Duty-Death Benefits

1. Classes A and B

- The member's accumulated contributions will be returned; plus, if one or more years of membership service, 50% of the greater of Average Final Compensation or current annual earnable compensation, or
- If (1) eligible for service retirement, or (2) would have become eligible for service retirement within 90 days, or (3) if retired on account of service, non-line-of-duty disability, or line-of-duty disability and dies within 30 days of retirement, or (4) entitled to a deferred allowance at age 60; and the member's designated beneficiary or his partner(s) is his spouse with whom he has been living for at least five years, such beneficiary may elect an allowance equal to the greater of 40% of the participant's accrued benefit or the amount that would have been paid under the Joint and 100% Contingent Option.

This benefit is offset by workers' compensation (excluding amounts paid to third parties). If no beneficiary and if intestate without heirs, then contributions shall remain part of the System.

- 2. Classes C and D
 - If (1) eligible for service retirement, or (2) would have become eligible for service retirement within 90 days, or (3) if retired on account of service, ordinary disability, or accidental disability and dies within 30 days of retirement, or (4) entitled to a deferred allowance at age 65, or (5) has 20 years of service and dies anytime between effective retirement date at age 65 and no later than 30 days following the attainment of age 65; the member's designated beneficiary shall receive an allowance equal to the greater of 40% of the participant's accrued benefit or the amount that would have been paid under the Joint and 100% Contingent Option, or
 - If (1) not eligible under paragraph (1) above, and (2) if one or more years of service, 50% of the greater of Average Final Compensation or current annual earnable compensation, shall be paid as a lump sum.

Line-of-Duty Death Benefits

If a member's death was the result of injuries in the line of duty, a refund of contributions shall be payable, if applicable. In addition, an annual pension of 100% of current earnable compensation (not less than \$10,000 on June 30, 1994) shall be payable to:

APPENDIX C SUMMARY OF PLAN PROVISIONS

- A. The spouse, provided there is no voluntary separation agreement renouncing rights of inheritance during her widowhood;
- B. If no eligible spouse, or if the spouse dies or remarries, the child or children equally until age 18 (age 22 if full-time student(s));
- C. If no eligible spouse or child surviving, then to the deceased's father and / or mother equally, or to the survivor;
- D. For Classes A and B, any member who retires and dies within 30 days after the effective date of line-of-duty disability retirement shall receive the above benefits if death is the result of injuries in the line of duty.

This benefit is offset by workers' compensation (excluding amounts paid to third parties). If no beneficiary and if intestate without heirs, then contributions shall remain part of the System.

Post-Retirement Benefit Increases

Annual post-retirement benefit increases of a fixed 1.5% for participants in pay status under age 65 and 2.0% for participants in pay status age 65 and over.
