

THE GENERAL RETIREMENT SYSTEM OF THE CITY OF DETROIT

ANNUAL ACTUARIAL VALUATION OF COMPONENT I AS OF JUNE 30, 2015

February 10, 2017

Board of Trustees
The General Retirement System of the City of Detroit

Re: The General Retirement System of the City of Detroit Actuarial Valuation of Component I as of June 30, 2015

Dear Board Members:

The results of the June 30, 2015 Annual Actuarial Valuation of Component I of the General Retirement System of the City of Detroit (DGRS) are presented in this report.

Based on our understanding, the required contribution rates shown on page 1 are in compliance with the Component I Plan and the City's Plan of Adjustment (POA) as approved by the Bankruptcy Court. The amount shown should not be considered a recommendation by the Actuary. While a recommended level of contributions is outside the scope of the engagement, it is likely that the Actuary would have recommended higher contributions than shown. Users of this report should be aware that contributions made at the POA and Plan required rate do not guarantee benefit security. Given the importance of benefit security to any retirement system, we suggest that contributions to the System in excess of those presented in this report be considered.

The funding level and estimated costs of the Plan shown in this report are based on the actuarial assumptions disclosed in Section F. This report includes some risk metrics, but does not include a robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment. We encourage a review and assessment of investment and other significant risks that may have a material effect on the plan's financial condition.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to other parties only in its entirety and only with the permission of the Board. Authorized or unauthorized use of this report by other parties does not create a liability between Gabriel, Roeder, Smith & Company and the other party.

The purpose of the valuation is to measure the System's funding progress and to provide a five-year funding projection. The five-year projection is to assist the Board with its duties related to Section 9.5 of the Combined GRS Plan. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

The findings in this report are based on data and other information through June 30, 2015. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Board of Trustees February 10, 2017 Page 2

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The valuation was based upon information furnished by the Retirement System staff, concerning Retirement System benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal reasonability and year-to-year consistency, but did not audit the information. We are not responsible for the accuracy or completeness of the information provided by the Retirement System staff. Census data supplied by the Retirement System was supplied separately for Component I and Component II (and from different source information). We reconciled the Component I and Component II data with each other and the data supplied for the 2014 Component II valuation with the help of System Staff. However, a number of manual changes were required to be made by Gabriel, Roeder, Smith and Co. in order to create data files that could be used for valuation purposes. These changes are discussed in the report.

This report was prepared using certain assumptions as described in the section of this report entitled Methods and Assumptions. The actuarial cost method is the Entry Age Actuarial Cost Method as prescribed by Section 9.3(1) of the Combined GRS Plan. The assumed rate of return is 6.75% for valuations through June 30, 2023 as prescribed by Section 1.16(3) of the Combined GRS Plan. Except for the assumed rate of investment return, the actuarial assumptions used for the valuation are set by the Board based upon advice of the actuary and other parties. The actuarial cost method and assumed rate of investment return of 6.75% are therefore prescribed methods and assumptions set by another party as discussed in Actuarial Standard of Practice No. 4. In our judgment, all of the actuarial assumptions used for the valuation are reasonable for purposes of the measurement contained herein.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge, the information contained in this report is accurate and fairly presents the actuarial position of Component I of the General Retirement System of the City of Detroit as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices and with the Actuarial Standards of Practice issued by the Actuarial Standards Board.

David T. Kausch and Judith A. Kermans are Members of the American Academy of Actuaries. These actuaries meet the Academy's Qualification Standards to render the actuarial opinions contained herein.

The signing individuals are independent of the plan sponsor. Gabriel, Roeder, Smith & Company will be pleased to review this valuation and report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,

David Tfausch

•	AVA/Payroll		10.09 %	0.00 %

Notes: Valuation payroll for June 30, 2014 is based on payroll reported for Component II (Legacy Plan) which has a different definition of pensionable earnings. 2014 liabilities have been adjusted downward by 3% to account for this difference.

AVA (actuarial value of assets) is equal to MVA (market value of assets). VPIF is the Variable Pension Improvement Factor or ad hoc COLA.

Please see pages 5-8 of the report for important comments regarding valuation results.

An estimate of the probability of future contributions being made was outside the scope of this project, not required by actuarial standards, and, therefore, was not made.

[#] Employer contributions are set at 5% of covered compensation per year through plan year 2023, regardless of the funded status of the Plan. Member contributions were initially set at 4.0% of payroll.

^{##} Benefits include a discretionary 2% simple Cost-of-Living Adjustment (COLA) beginning in the July 1, 2018 plan year. Plan provisions provide criteria for when a COLA can be paid. The current assumption is that on average, over a members retirement years, we expect they will receive the equivalent of a 0.5% COLA (or VPIF). See comments on pages 5-8 for additional details.

^{*} Assumes none of the employer contribution is allocated to the Rate Stabilization Fund.

DEVELOPMENT OF LIABILITIES AS OF JUNE 30, 2015 RETIREMENT SYSTEM TOTALS

Valuation Assumptions (1/2% VPIF)

(7)	UAAL for 2% VPIF: (5) + (6)	\$ 54,794,604
(6)	Additional Amount for 2% VPIF	8,347,278
(5)	Unfunded Actuarial Accrued Liability (UAAL): (3) - (4)	\$ 46,447,326
(4)	Accrued Assets	20,096,899
(3)	Actuarial Accrued Liability: (1) - (2)	66,544,225
(2)	Flesent Value of Puture Normal Costs	90,342,069
(2)	Present Value of Future Normal Costs	96,342,689
(1)	Present Value of Future Benefits	\$ 162,886,914

The COLA or VPIF provided in the Plan is a 2.0% simple post retirement increase at the beginning of each plan year starting the later of 1) July 1, 2018; 2) one year after retirement; or 3) age 62. However, Section 9.5 of the Plan imposes several limitations on when the COLA can be paid (or clawed back). Based on this section of the plan, it is reasonable to assume that the average COLA a retired member will receive over their lifetime will be less than 2%. For purposes of this report we have assumed that the average COLA is equivalent to 0.5% (unless specified otherwise). Future Plan experience, Board policy, and Plan interpretation regarding the administration of Section 9.5 may result in changes to this assumption. If the full 2% VPIF were assumed, the present value of benefits would be \$182.0 million and the actuarial accrued liability would be \$74.9 million rather than \$66.5 million.

The Transition Cost is defined in Section E-16 of the Combined Plan as the accrued liability at plan inception due to vesting and eligibility service earned prior to the Component I effective date (July 1, 2014). While Transition Costs are not used in the main valuation, they are used in the projections performed for Section 9.5 of the Plan. The Board has adopted a VPIF assumption of 0.0% for determining the Transition Costs. The Transition Costs have a potential source of funding separate from employer and employee contributions (see comments on page 5). However, to the extent that the potential separate source of funding does not materialize (or is not sufficient) then the transition costs will have to be funded by future employer and employee contributions. As of June 30, 2015, the remaining transition cost is \$35.4 million. This means that of the \$46.4 million UAAL shown above (under current valuation assumptions), \$11.0 million (at least) will need to be funded by future contributions (\$46.4-\$35.4).

CONTRIBUTIONS COMPARATIVE SCHEDULE

Employer Contributions for

2014 2015	4.00% 4.00%	3.22% 3.17%	0.81% 0.81%	0.97% 1.02%	0.97% TBD	0.00% TBD	2015/16 2016/17	Mandated Mandated

[&]amp; Employer Contributions are set at 5.0% of covered compensation per year until 2024.

^{# &}quot;Mandated" (Chapter 9.3(2)) if specified by Plan document and POA; "Actuarially Determined" if determined by a valuation based on Board's funding policy.

^{*} Rate Stabilization Contributions are determined by the City through 2024.

COMMENTS

COMMENT 1 – Fiscal Responsibility Test

The five-year projections required under section 9.5 of the plan (Titled Fiscal Responsibility) are shown in Section C of this report, which starts on page 13. The projections are based on the assumptions and methods adopted by the Board, as detailed on page 13. The results of the projections are shown on page 15 and indicate that the plan is projected to be 98% funded in five years. Since the projected funded status is below 100% in five years, we believe Board actions may be required as detailed under section 9.5 (1) of the plan. Specifically, member mandatory contributions may need to be increased to 5% of payroll in accordance with section 9.5 (1)(c). Since the projected funded status is above 80% in five years, we believe Board action described under section 9.5 (2) of the plan may not be required. We recommend that the Board consult with legal counsel to determine which Board actions are required by the plan. Section 9.5 is reproduced in this report on pages 16-17, for convenience. The two major factors resulting in the projections falling below 100% are 1) an asset transfer to fund Transition Cost did not occur in 2015 (due to the level of investment return – see Comment 3); and 2) an investment loss occurred in 2015 (the market rate of return was -13.55% compared with an assumed rate of return of 6.75%).

COMMENT 2 - Actuarial Assumptions

The assumed rate of return prescribed by the POA is 6.75%, net of investment and administrative expenses. We have reviewed the reasonableness of this assumption based on the plan's investment policy and the capital market assumptions of eight nationally recognized investment consulting firms using our Capital Market Assumption Modeler. The analysis depends on the underlying price inflation and the rate of administrative expenses. Based on our analysis, the prescribed 6.75% rate of return is reasonable for the purpose of the measurement. If the Board would like, we can prepare a separate report of our analysis.

COMMENT 3 - Post Retirement COLA

This plan has a post retirement COLA feature known as the Variable Pension Improvement Factor or VPIF of a 2% simple COLA. It can be granted beginning July 1, 2018 only if the five-year projection shows the plan funded status at 100% based upon 6.75% future investment return. However, since there are conditions under which the VPIF cannot be paid (and even reduced) we have assumed that on average a VPIF of ½% will be paid in the development of the accrued liabilities. This assumption will be reviewed after experience emerges.

COMMENT 4 - Transition Cost

The Transition Cost is defined in Section E-16 of the Combined Plan as the accrued liability at plan inception due to vesting and eligibility service earned prior to the Component I effective date (7/1/2014). The Board has adopted a VPIF of 0.0% for the Transition Cost. The Transition Cost is not directly used in the valuation. The Plan provides for a separate funding source for Transition Costs until FY2024. Because of this separate funding source, it is reasonable to account for the Transition Cost separately in the projections called for in Section 9.5 of the Plan (the Fiscal Responsibility). This is further discussed in Section C of this report.

As of June 30, 2015, the remaining Transition Cost is \$35.4 million and a UAAL of \$46.4 million, based on the valuation assumption of ½% VPIF. The difference of \$11.0 million is the current measure of the amount of the UAAL expected to be directly funded by employer and member contributions in excess of normal costs.

COMMENT 5 – Administrative Expenses

The results in this report assume an investment return rate of 6.75%, net of administrative expenses. We understand that the administrative expenses of the General Retirement System are being split evenly between Component I and Component II. As a result, administrative expenses may put downward pressure on the Component I funded status in the short term. As an indication of the magnitude, the FY 2015 Component I administrative expenses were approximately 7% of the FY 2015 Component I market value of assets.

The computation of the rate of return net of administrative expenses will therefore be significantly lower than the gross rate of return and may differ from investment performance measures. This effect is expected to decline over time as the trust builds up assets. The total administrative expenses as a percent of the Combined Plan (Component I and Component II) assets was approximately 30 basis points.

COMMENT 6

Interest on voluntary member contributions is based on the earning rate of the plan subject to a minimum of 0% or a maximum of 5.25% per year. The plan document does not specify whether the earnings rate is to be computed net of administrative expenses.

COMMENT 7 - Funding

Mandatory Employee contributions are initially set to 4.0% of compensation but can be increased if necessary to maintain funding levels at 100%. Employer contributions are set at 5.0% of payroll through June 30, 2023. Employer contributions are actuarially determined beginning in 2024 to be the amount necessary to fund the plan on an actuarial basis. The 5% of payroll employer contribution rate exceeds the normal cost rate of 3.17% of payroll by 1.83% of payroll (when the normal cost rate is based on the valuation assumption of 0.5% VPIF).

	(1)	(2)	(3)	(4)	(5)
	Employer				
	Normal	Employer	Excess		Amortization
	Cost Rate	Rate	(2)-(1)	UAAL	Period
Valuation Assumptions (0.5% VPIF)	3.17%	5.00%	1.83%	\$ 46.4 mill.	18
Full 2% VPIF	3.98%	5.00%	1.02%	\$ 54.8 mill.	Over 100 Years

However, the plan anticipates another funding source for the Transition Cost portion of the UAAL. In the event that the rate of interest credited to the Annuity Savings Fund (ASF) of the Component II (Legacy) Plan is less than the rate earned by the Component II trust, a transfer of the difference in rates (applied to the Component II ASF balance) to the Component I trust may occur to fund transition liabilities. Transfers cease after June 30, 2023. As of June 30, 2016, no such transfers have been made. For purposes of this valuation, future transfers were not anticipated (assumed not to occur).

COMMENT 8 – ASF Transfers

A simple estimate of the future ASF transfers that could be made follows. As of June 30, 2015, the ASF balance totaled \$186 million. A deterministic approach would be to assume that future excess transfers of 1.50% (6.75% rate of return minus 5.25% maximum interest crediting) of ASF balances are made each year. We understand that the System has determined that no excess ASF interest was to be transferred in the year ending June 30, 2016, so we assume the first transfer occurs the next year. We also assume that Component II plan members will draw down their ASF balances over the next ten years so future transfers will decline as the ASF balance does. **Based on these assumptions, the expected present value of transfers from the ASF totals \$10.3 million, well short of the \$35.4 million remaining Transition Cost.**

We recommend that the Board set up an alternate plan for funding the Transition Cost in case future transfers are not sufficient to fund the remaining Transition Cost.

COMMENT 9

The determination of the Normal Cost is dependent on the ultimate normal cost Entry Age Normal Cost method. Our understanding of the Plan's and City's objectives is to have a level total normal cost and a separately funded transition cost consistent with this method. The ultimate normal cost method is currently under review by the Actuarial Standards Board and alternate calculations may be required in the future.

COMMENT 10 - 401(h) Account

Section 16 of the GRS Combined Plan includes provision for medical benefits to be funded through a 401(h) subaccount. Employer contributions to a 401(h) subaccount are limited by Internal Revenue Code regulations. Our understanding is that the City has no intent to fund medical benefits through the plan's 401(h) account at this time. If the City intends to make such contributions, additional testing will be required.

COMMENT 11 - RSF

It is our understanding of the Plan that the amount of employer contributions credited to the Rate Stabilization Reserve (RSF) is at the discretion of the Employer. We have been informed that the Employer has directed that none of the Employer contributions for FY 2015 and FY 2016 be credited to the RSF.

COMMENT 12 – Reported Pay

Due to changes in the way payroll was reported, we changed the timing of future pay increases from end of year to beginning of year.

COMMENT 13 - Data Adjustments

Census data as of June 30, 2015 was received from two separate sources. The only Component I specific data received contained members that were active during the year. After reconciling both the Component I and Component II data, it was discovered that there were several members that had a retired or deferred Component I benefit. In order to value these members, the following actions were taken:

- All members were assumed to have one year of Component I benefit service.
- For retired and deferred members, June 30, 2014 active data was used to determine salary and vesting service.
- Benefits were then calculated assuming immediate termination, using one year of benefit service, and determining the AFC using the salary.
- Eligibility for deferred versus immediate benefits was determined based on vesting service.

Furthermore, it was discovered that the Component I active data provided did not contain annualized salaries. In particular, we understand that the salaries reported contained at most 10.5 months of salary information. In order to value the active members, Gabriel, Roeder, Smith & Company annualized the provided salaries.

If readers of this report have information to indicate that the data adjustments described above are not reasonable, they should immediately inform the authors and should not rely on results of the report.

		Loss		Loss		Loss
(9) Percent of BOY AAL (9)/(1A)		(5.67)%		5.44%		(11.11)%

The main sources of the liability loss were:

- New actives with more than 1 year of eligibility/vesting service.
- A conservative method of estimating benefits for retired and deferred members (see page 6 for details).
- Other changes in reported data.

Other liability experience was mostly offsetting.

^{*} Normal Cost includes current year voluntary member contributions.

Section 9.5, Fiscal Responsibility, of the Combined GRS Plan contains several provisions for adjusting contributions and or benefits to be determined based on a 5-year projection of the funded status of the plan. This section calls for two different funded status projection tests:

- Section 9.5(1) test for the funded status falling below 100%
- Section 9.5(2) test for the funded status falling below 80%

Section 9.5(2) specifically states that actions taken under Section 9.5(1)(a) should be reflected in the projections but that actions taken under Section 9.5(1)(b) and 9.5(1)(c) should be excluded in the projections. Section 9.5(3) specifies the interest rate to be used in the projections. Other assumptions used in the projections were adopted by the Board based on the recommendation of the Investment Committee and are summarized below:

- The five-year projections are based on the general valuation assumptions as previously adopted by the Board (e.g., inflation, mortality, retirement, withdrawal, etc.).
- The VPIF is assumed to be 0% and the transition cost should assume 0% VPIF and should be excluded from the projected liabilities based upon a 9-year level dollar amortization.
- Component II ASF balances are assumed to be withdrawn as a level dollar amount over the next 10 years, however voluntary employee contributions into the Component I Annuity Savings Fund shall be assumed to continue at the historical levels as previously contributed to the Component II ASF. For Transition Funding purposes, an appropriate arbitrage of the difference between the assumed rate of investment return of 6.75% and the maximum interest rate that can be credited to the ASF Accounts of 5.25% should be used for both the Component I and Component II ASF Accounts.
- The Component I assets shall include the Rate Stabilization Fund to the extent the plan is less than 100% funded.
- The Annual Actuarial Valuation for the fiscal year ending June 30, 2015 shall generate the first five-year projection. Upon receipt of the June 30, 2015 valuation, a determination shall be made whether any remedial action is required. In the event remedial action is required, such remedial action shall be effective July 1, 2017.
- The funding value of plan assets for purposes of Section 9.5 testing of the Component I plan funding level shall be based upon the market value of assets on the valuation date and projected based on an assumed 6.75% rate of return for each of the 5 years in the projection period.
- Methods and assumptions are the same for both tests.
- 5% of payroll employer contributions
- 4% of payroll member contributions
- Voluntary employee contributions are included in both the assets and the liabilities.

Transition Cost

Under the current actuarial cost method, members with past vesting service generate an initial liability as of June 30, 2014. This is the "Transition Cost" described in Section E-16 of the Combined GRS Plan. A separate funding source was established for the Transition Cost through 2023. The projections net the Transition Cost out of the Actuarial Accrued Liability to determine projected funded status. As directed by the Board, Projected Transition Cost is based on the 9-year level dollar amortization of the initial Transition Cost amount and the initial Transition Cost amount is based on a 0.0% VPIF. An amortization schedule of the Transition Cost follows. Note, under this method any future gains or losses related to the Transition Cost would be accounted for in the Actuarial Accrued Liability net of Transition Cost as they occur.

Transition Cost Amortization Schedule

Calculated Using a Level Dollar Amortization (mid-year payments) and an Investment Return Assumption of 6.75% Compounded Annually 9-Year Closed Amortization (based on 0.0% VPIF)

			Annual Contributions	
Valuation Date	Fiscal Year	Transition Cost	During Fiscal Year	Transition Cost
June 30	June 30	at Beginning of Year	Dollars	at End of Year
2014	2015	\$ 38,679,331	\$ 5,685,036	\$ 35,416,412
2015	2016	35,416,412	5,685,036	31,933,247
2016	2017	31,933,247	5,685,036	28,214,968
2017	2018	28,214,968	5,685,036	24,245,704
2018	2019	24,245,704	5,685,036	20,008,516
2019	2020	20,008,516	5,685,036	15,485,318
2020	2021	15,485,318	5,685,036	10,656,803
2021	2022	10,656,803	5,685,036	5,502,364
2022	2023	5,502,364	5,685,036	0

To the extent that actual funding of the Transition Cost differs from this schedule, gains and losses will accumulate in the plan's unfunded actuarial accrued liability.

Projected Funded Status

5-Year Projection	Assuming 6.75%	Investment Return in all Future	Years - No (0%)	%) VPIF (COLA)

		\mathbf{A}	В	$\mathbf{C} = (\mathbf{A} - \mathbf{B})$	D	$\mathbf{E} = (\mathbf{D}/\mathbf{C})$
Valuation Date	Fiscal Year		Transition			Net Funded
June 30 ,	June 30,	Total AAL	Cost	Net AAL	Assets	Ratio
2015	2016	\$ 63,760,900	\$ 35,416,412	\$ 28,344,488	\$ 20,096,899	71%
2016	2017	87,888,142	31,933,247	55,954,895	48,632,078	87%
2017	2018	113,479,926	28,214,968	85,264,959	78,885,518	93%
2018	2019	140,612,585	24,245,704	116,366,881	110,944,313	95%
2019	2020	169,361,321	20,008,516	149,352,804	144,894,753	97%
2020	2021	199,765,836	15,485,318	184,280,519	180,787,957	98%

Comment 1: Based on this projection, the Funded Status falls below 100% by the end of the 5-year projection. We believe this result requires Board action under Section 9.5(1)(a), 9.5(1)(b), and 9.5(1)(c). We recommend the Board consult with legal counsel regarding the specific actions.

Comment 2: Based on this projection, the Funded Status is at or above 80% by the end of the 5-year projection. We believe this result means the Board actions under Section 9.5(2) are not required. We recommend the Board consult with legal counsel to confirm.

Comment 3: The future ASF transfers are assumed to occur each year. As of the publication of this report, the plan assets as of June 30, 2016 are available and show that no ASF transfer was made in the year ending June 30, 2016. The projection could be modified to reflect this fact. The resulting funded ratios would be lower than those shown. Without the first year ASF transfers and using the reported assets of June 30, 2016, the projected funded status would be as follows:

5 Voor	Projection	Heina	Actual 2016	Accote
э- теяг	Protection	USING	ACHIAL ZUTO	ASSEIS

		\mathbf{A}	В	$\mathbf{C} = (\mathbf{A} - \mathbf{B})$	D	$\mathbf{E} = (\mathbf{D}/\mathbf{C})$
Valuation Date	Fiscal Year		Transition			Net Funded
June 30 ,	June 30,	Total AAL	Cost	Net AAL	Assets	Ratio
2015	2016	\$ 63,760,900	\$ 35,416,412	\$ 28,344,488	\$ 20,096,899	71%
2016	2017	87,888,142	31,933,247	55,954,895	37,907,715	68%
2017	2018	113,479,926	28,214,968	85,264,959	67,437,260	79%
2018	2019	140,612,585	24,245,704	116,366,881	98,723,298	85%
2019	2020	169,361,321	20,008,516	149,352,804	131,848,819	88%
2020	2021	199,765,836	15,485,318	184,280,519	166,861,423	91%

This alternate projection shows that the funded status will drop when the funding source for the transition cost (ASF Transfers) do not occur, in the absence of an experience gain.

Section 9.5 in its entirety is shown below:

Sec. 9.5. Fiscal Responsibility: Increased Funding Obligations and Benefit Reductions

- (1) To safeguard the long-term actuarial and financial integrity of the Retirement System, in the event the funding level of Component I of the Retirement System projected over a five-year period falls below one hundred percent (100%), the following remedial action shall be required in the order set forth below, beginning with the Plan Year following the Plan Year in which such determination is made and continuing until the funding level is restored to not less than one hundred percent (100%):
 - (a) the Trustee may not award the variable pension improvement factor (escalator) described in Section 6.2 to any Retiree;
 - (b) all amounts credited to the Rate Stabilization Fund shall be transferred to the Pension Accumulation Fund for the purposes of funding benefits payable under Component I of the Retirement System; and
 - (c) Member Mandatory Employee Contributions shall be increased from four percent (4%) of Compensation to five percent (5%) of Compensation for up to the next following five Plan Years.
- (2) In the event the funding level of Component I of the Retirement System determined as provided in Section 9.5(1) is projected to fall below eighty percent (80%), the following remedial action shall be required in the order set forth below, beginning with the Plan Year following the Plan Year in which such determination is made and continuing until the funding level is projected to be not less than eighty percent (80%) on a market value basis within the next five years:
 - (a) the remedial action required in Section 9.5(1) shall be implemented or continued;
 - (b) the Retirement Allowance payable to a Retiree shall not include the variable pension improvement factor (escalator) that was most recently added to the Retiree's Retirement Allowance for a Plan Year;
 - (c) Member Mandatory Employee Contributions shall be increased from five percent (5%) of Compensation to six percent (6%) of Compensation for up to the next following five Plan Years;
 - (d) the Retirement Allowance payable to a Retiree shall not include the variable pension improvement factor (escalator) that was most recently added to the Retiree's Retirement Allowance for the Plan Year preceding the Plan Year referenced in paragraph (b) above; and
 - (e) the Retirement Allowance accrued by Members for up to the next five Plan-Year period shall be determined as provided in Section 6.1, except that one percent (1 %) shall be substituted for one and one-half percent (1.5%) wherever it appears in said Section 6.1.

In determining whether the eighty percent (80%) funding level under this Section 9.5(2) has been achieved, the Plan's Actuary shall calculate the funding percentage of the Retirement System after taking into account the elimination of the variable pension improvement factor (escalator) pursuant to Section 9.5(1)(a) but prior to taking into account the remedial steps provided in Sections 9.5(1)(b) and (c).

(3) For purposes of this Section 9.5, the "funding level" of Component I of the Retirement System shall mean the ratio of the market value of the assets of Component I of the Retirement System to the actuarial accrued liability of Component I of the Retirement System. The actuarial accrued liability shall be calculated by the Plan's Actuary utilizing an interest rate assumption of six and three-quarters percent (6.75%) and other reasonable assumptions as directed by the Board upon the recommendation of the Investment Committee. The market value of assets shall be determined on the basis of a three-year look back period of smoothed investment returns.

EXPECTED TERMINATIONS FROM ACTIVE EMPLOYMENT FOR CURRENT ACTIVE MEMBERS

The chart above shows the expected future development of the present population in simplified terms. The Retirement System presently covers 4,981 active members. Eventually, 491 people are expected to terminate covered employment prior to retirement and forfeit eligibility for an employer provided benefit. 4,032 people are expected to receive monthly retirement benefits either by retiring directly from active service, or by retiring from vested deferred status. 458 people are expected to receive death-in-service or disability benefits.

SUMMARY OF ASSUMPTIONS AND METHODS USED FOR ACTUARIAL VALUATIONS ADOPTED BY BOARD OF TRUSTEES

Funding Methods

The entry age actuarial cost method was used in determining liabilities and normal cost as prescribed by Section 9.3(1) of the Combined GRS Plan. Under this method, each individual's normal cost is determined as a level percent of pay based on a replacement life or "ultimate" normal cost. This method is based on the objective of the plan to separately fund Transition Cost and future accruals. The application of this method differs for funding and accounting.

Unfunded Actuarial Accrued Liabilities - Actual employer contributions through June 30, 2023 are set at 5.0% of pay. Additional funding for Transition Costs may occur as a result of Component II ASF transfers. Employer contributions after June 30, 2023 will be actuarially determined based on the Board's funding policy. The Board funding policy has not yet been established.

Present assets are set equal to the Market Value.

The data about persons now covered and about present assets were furnished by the System's administrative staff. Although examined for general reasonableness, the data was not audited by the Actuary.

SUMMARY OF ASSUMPTIONS AND METHODS USED FOR ACTUARIAL VALUATIONS ADOPTED BY BOARD OF TRUSTEES

All demographic assumptions are estimates of future experience except as noted. The rationale for the assumptions is based on the 2002-2007 experience study of the Component II plan unless noted otherwise.

Economic Assumptions

Actuarial Assumptions

The assumptions and methods are those adopted by the Board with the exception of the discount rate. For purposes of plan funding, the discount rate is 6.75% as prescribed by Section 1.16(3) of the Combined GRS Plan.

The investment return rate used was 6.75% per year, compounded annually (net after investment and administrative expenses). This assumption is prescribed by the Eighth Amended Plan for the Adjustment of Debts of the City of Detroit (POA).

Pay increase assumptions for individual active members are shown on page 27. Part of the assumption for each age is for a merit and/or seniority increase, and the other recognizes wage inflation (as of June 30, 2014 assumed to be 2.00% for five years, 2.50% for the next five years after that and 3.00% thereafter). The rationale for this assumption is that it is consistent with expectations by the employer used during the plan design.

Price inflation is not directly used in the valuation. For purposes of assessing the reasonableness of the assumed rate of return, we assumed a price inflation of 2.50% per year.

Non-Economic Assumptions

The mortality table used to measure retired life mortality was 100% of the RP-2014 Blue Collar Annuitant Table set-forward 1 year for males and 100% of the RP-2014 Blue Collar Annuitant Table set-forward 1 year for females. Tables were extended below age 50 with a cubic spline to the published Juvenile rates. Pre-retirement mortality is based on the corresponding Employee tables. The tables are projected to be fully generational, based on the 2-dimensional, sex distinct mortality improvement scale MP-2014 (which was published and intended to be used with RP-2014). For disabled members, the same tables are used. The rationale for the mortality assumption is provided in the 2008-2013 Mortality Experience Study issued February 4, 2015.

The probabilities of retirement for members eligible to retire are shown on pages 28 and 29. The rationale is based on the 2002-2007 Experience Study modified as necessary to account for the difference in eligibility of the Component I plan.

The probabilities of separation from service (including death-in-service and disability) are shown for sample ages on page 31. The rationale is based on the 2002-2007 Experience Study for the Component II plan.

Members eligible to retire under Component II as described above are assumed to defer any Component I vested benefits until normal retirement age.

Note that the groups detailed above have different eligibility conditions under Component II.

The rationale for the retirement probabilities is the 2002-2007 Experience Study modified to account for the different eligibility in Component I and split to estimate which eligibility (Component I or Component II) would influence members based on the relative service under each component.

MISCELLANEOUS AND TECHNICAL ASSUMPTIONS

Benefit Service Exact Fractional service is used to determine the amount of benefit

payable.

Decrement Operation Disability and mortality decrements do not operate during the first 5

years of service. Disability and withdrawal also do not operate during

retirement eligibility.

Decrement Timing Decrements of all types are assumed to occur mid-year.

Eligibility Testing Eligibility for benefits is determined based upon the age nearest birthday

and rounded service on the date the decrement is assumed to occur.

Forfeitures None

Marriage Assumption 100% of males and 100% of females are assumed to be married for

purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses for active member valuation

purposes.

Normal Form of Benefit Straight life is the normal form of benefit.

Service Credit Accruals Service accruals for calculating benefits begin as of June 30, 2014 for

Component I liabilities. However, service in Component II may be used

to satisfy benefit eligibility requirements in Component I.

Sick Leave None.

Pay Increase Timing Beginning of (Fiscal) year. This is equivalent to assuming that reported

pays represent amounts paid to members during the year ended on the

valuation date.

Disability BenefitsDuty Disability benefits were increased by 3.5% to account for the

Death While Disabled provision. The 3.5% increase was determined by examining the effect of the Death While Disabled provision on several

hypothetical test cases.

Actuarial Equivalent No adjustments have been made for actuarial equivalent benefits. The

Board has not adopted a definition of actuarial equivalent.

IRC Section 415 Limit No adjustments have been made for 415 limits. The limit is assumed to

grow with wage inflation.

IRC Section 401(a)(17) Limit All of the member salary provided falls below the 401(a)(17) limit. The

limit is assumed to grow with wage inflation.

IRC Section 401(h) Limit We did not test for the 401(h) limit on employer contributions for

medical benefits. No employer contributions are anticipated in this

valuation.

COLA (VPIF) Unless stated otherwise, contributions determinations are based on the

full VPIF (2% simple COLA). Transition Costs are based on the full VPIF. Other liabilities in this report are based on an assumed average

½% future VPIF.

Voluntary Contributions For the valuation, future voluntary contributions will be reflected in

future valuations as they occur. No adjustments have been made to reflect future interest crediting to voluntary contributions. For fiscal

responsibility calculation, see Section C for assumptions.

Data Adjustments Vested Deferred and Retired members were not reported but several

were confirmed by staff after receiving our reconciliation and data questions. See page 8 for a description of how these members were

handled in the valuation.

SECTION G

PLAN PROVISION SUMMARY

(as approved by staff)

Plan Year

The Plan Year is the 12-month period commencing on July 1, and ending on June 30. The first plan year starts July 1, 2014.

Full Time Employees

Full Time Employees are individuals who are required to work 600 hours per year. Part time transit operators working 25 hours per week are not full time employees. Special Service Operators are required to work 1,440 hours per year. However, once a Special Service Operator meets the requirement in any year, he or she is deemed to meet it in all future years.

Plan Membership

The membership of the Retirement System shall consist of all persons who are full time employees of the City of Detroit except persons who are members of the Police and Fire Retirement System of the City of Detroit and those individuals who are active members in any other public employee pension plan adopted by either the State of Michigan (other than the Michigan National Guard), or any other political subdivision of the State of Michigan.

Service Credit

Credited Service: A member is credited with one month of Credited Service for each calendar month in which the individual performs 140 hours or more of service for the employer as an employee. Credited Service is recorded from the later of July 1, 2014, or the date of hire whichever is later.

Prior Service: Refers to service credit awarded to a member prior to July 1, 2014 under the terms of the Retirement System in effect on June 30, 2014.

Vesting Service: A member is credited with a year of vesting service for each Plan Year commencing on or after July 1, 2014 during which the member performs 1,000 or more hours of work for the employer. Prior Service, as defined above, is also Vesting Service.

Military Service: A member who enters the military while employed by the City and returns to employment with the City following military service receives service credit in the Retirement System for the military service time as though there had been no interruption of employment. In order to receive such service credit, the individual must pay contributions to the Retirement System for the military service time upon return to employment.

Average Final Compensation

Compensation: Compensation is base salary or wages, excluding bonuses, overtime pay, payment of unused accrued sick leave, longevity pay, payment for unused accrued vacation, the cost or value of fringe benefits, termination or severance pay, reimbursement of expenses or other extra payment of any kind. Compensation includes deferred compensation and "picked up" employee contributions to the Retirement System. Compensation is limited by IRC Section 401(a)(17).

Average Final Compensation: The average of the compensation received during the 10 consecutive years of Credited Service (including Prior Service) immediately preceding the date of the members last termination with the employer. If the member has less than ten years of Credited Service (including Prior Service), the Average Final Compensation is the average of the compensation received during all years of Credited Service.

Normal Retirement

Normal Retirement Age: The Normal Retirement Age is 62. For individuals who were active employees and who had 10 or more years of Vesting Service as of June 30, 2014 the normal retirement age is reduced as follows.

Age as of July 1, 2014	Normal Retirement Age
<u> </u>	
52 years or younger	62 Years
53 years	61 years and 9 months
54 years	61 years and 6 months
55 years	61 years and 3 months
56 years	61 years
57 years	60 years and 9 months
58 years	60 years and 6 months
59 years	60 years and 3 months
60 years	60 years
61 years	60 years

Normal Retirement Date: The later of 10 years of Vesting Service and attainment of Normal Retirement Age.

Normal Retirement Amount: The retirement allowance payable to a member who retires on or after the normal retirement date is 1.5% times average final compensation times Credited Service (after June 30, 2014) measured to the nearest month.

Early Retirement

Eligibility: Age 55 with 30 or more years of credited service plus prior service.

Early Retirement Amount: The early retirement amount is the actuarial equivalent of the deferred retirement allowance that would be payable to the member on the Normal Retirement Date, assuming that the member terminated employment on the early retirement date.

Deferred Retirement (Vested Benefit)

Eligibility: 10 years of Vesting Service.

Benefit Commencement: Age 62.

Annual Amount: Same as Normal Retirement but based on Average Final Compensation and Credited Service at the time of termination.

Disability Retirement

Eligibility: The individual must be eligible for long term disability benefits under a policy or plan of insurance or self-insurance maintained by the employer.

Amount: The Normal Retirement Allowance payable at Age 62. For members disabled in the line of duty, credited service accrues while a member is entitled to receive long term disability under the employer's plan or policy.

Accidental (Line of Duty) Death Before Retirement

Eligibility: Death resulting directly from performance of duty in the service of the employer or as a result of illness contracted or injuries received while in the service of the employer.

Amount: The surviving spouse is eligible to receive a monthly amount equal to the member's Retirement Allowance at time of death (minimum 10% of Average Final Compensation), unreduced for early payment, and payable until the surviving Spouse's death. Amounts payable from Worker's Comp or similar programs are offset against the amount payable to the spouse.

Ordinary (Other than Line of Duty) Death Before Retirement

Eligibility: 10 or more years of credited service (or death during disability, but prior to commencement of the retirement allowance). The individual must be employed by the employer at time of death.

Amount: The Surviving Spouse shall receive a retirement allowance computed as though the member had retired the day before death, notwithstanding that the death was prior to the Normal retirement Date, elected the Joint and 100% Option in favor of the spouse, and then died. Amounts payable from Worker's Comp or similar programs are offset against the amount payable to the spouse.

Refund of Mandatory Contributions

A member who ceases to be an employee for reasons other than retirement, death, or disability, may elect to receive a refund of mandatory Accumulated Contributions (without interest) in lieu of any other Component I benefit payable. In the case of a member who dies while employed by the City, or following termination of employment with the City, if no Surviving Spouse benefit is payable, the accumulated mandatory Employee Contributions (without interest) are paid to the member's estate.

Variable Pension Improvement Factor (VPIF Escalator)

Eligibility: Attainment of at least Age 62, and in receipt of a retirement allowance for at least 12 months as of the first day of the Plan Year.

Amount: Beginning July 1, 2018 and effective the first date of each Plan year thereafter, the Board may determine that a retiree's Component I Retirement Allowance shall be increased by 2% of the original retirement allowance. The VPIF Escalator may not be awarded in the event that the funding level of Component I of the Retirement System projected over a 5-year period falls below 100%. The VPIF escalator is not compounded.

Contributions

Members: 4% of Compensation. Member contributions are "picked up" in accordance with IRC 414(h).

Employers: 5% of Compensation commencing July 1, 2014 and ending June 30, 2023, to be split between the Pension Accumulation Fund and the Rate Stabilization reserve. For Plan years beginning July 1, 2023 and later, contributions shall be determined by an Actuary using reasonable and appropriate assumptions approved by the Board and the Investment Committee.

Voluntary Employee Contributions

Eligibility: Non-union member, or union member with Coverage by a collective bargaining agreement that permits the member to make Voluntary Employee Contributions to Component I.

Amount: 3%, 5%, or 7% of compensation at the election of the member. All voluntary employee contributions are made on an after tax basis.

Earnings Crediting: Each Plan Year, accounts are credited with earnings at a rate equal to the net investment rate of return of Retirement System Assets for the second Plan Year immediately preceding the Plan Year in which earnings are to be credited. The earnings rate may not be less than 0% and may not exceed 5.25%.

Distribution: Upon termination of employment, accounts may be distributed in a lump sum, in equal monthly installments for a period not exceeding three years, or, at the option of the member, in the form of an actuarially equivalent life annuity payable in the same form as and added to the member's Retirement Allowance. The determination of actuarial equivalent for this purpose is based upon market rates of investment return and other market related assumptions. In the case of a member who dies before receiving a distribution of his or her voluntary account, the value of the account is payable to the nominated beneficiary, or to the estate.

Forms of Payment

Normal Form of Payment: The normal form of payment is a straight life allowance with no death benefit, and, in particular, no residual refund of mandatory employee contributions. Until the date the first Retirement Allowance payment check is issued, any Member may elect to receive payment either in the Normal Form or in the Actuarial Equivalent of the Normal Form computed as of the effective date of retirement and payable in one of the forms described below.

Option One. Modified Cash Refund Annuity: If a Retiree who elected a Modified Cash Refund Annuity dies before payment has been received in an aggregate amount equal to, but not exceeding the Retiree's Accumulated Mandatory Employee Contributions at the time of retirement, the difference between said Accumulated Mandatory Employee Contributions and the aggregate amount of annuity payments already received, shall be paid in a single lump sum to a Beneficiary nominated by written designation duly executed by the Member and filed with the Board. If there are no such designated Beneficiaries surviving said Retiree, any such difference shall be paid to the Retiree's estate.

Option Two. Joint and One Hundred Percent Survivor Allowance: Upon the death of a Retiree who elected a Joint and One Hundred Percent Survivor Allowance, one hundred percent of the reduced Retirement Allowance shall be paid to and continued throughout the life of the Beneficiary nominated by written designation duly executed and filed with the Board prior to the date the first payment of the Retirement Allowance becomes due.

Option "A". Joint and Seventy-Five Percent Survivor Allowance: Upon the death of a Retiree who elected a Joint and Seventy-Five Percent Survivor Allowance, seventy-five percent of the reduced Retirement Allowance shall be continued throughout the life of and paid to the Beneficiary nominated by written designation duly executed by the Member and filed with the Board prior to the date the first payment of the Retirement Allowance becomes due.

Option Three. Joint and Fifty Percent Survivor Allowance: Upon the death of a Retiree who elected a Joint and Fifty Percent Survivor Allowance, fifty percent of the reduced Retirement Allowance shall be continued throughout the life of and paid to the Beneficiary nominated by written designation duly executed by the Member and filed with the Board prior to the date the first payment of the Retirement Allowance becomes due.

Option "B". Joint and Twenty-Five Percent Survivor Allowance: Upon the death of a Retiree who elected a Joint and Twenty-Five Percent Survivor Allowance, twenty-five percent of the reduced Retirement Allowance shall be paid throughout the life of the Beneficiary nominated by written designation duly executed and filed with the Board prior to the date the first payment of the Retirement Allowance becomes due.

Joint and Survivor Optional Forms of Payment: The Joint and Survivor Optional Forms of Payment provided under the Retirement System shall be made available in either the standard form or the pop-up form, as follows:

Standard Form: Under the Standard Form, the reduced Retirement Allowance shall be paid throughout the lifetime of the Retiree.

Pop-up Form: Under the Pop-up Form, the reduced Retirement Allowance shall be paid throughout the lifetime of the Retiree and the designated Beneficiary. In the event of the death of the designated Beneficiary during the lifetime of the Retiree, the amount of the Retirement Allowance shall be changed to the amount that would have been payable had the Retiree elected the Straight Life Retirement Allowance Form of Payment.

Coordination of Benefits: According to such rules and regulations as the Board shall adopt, until the first payment of a Retirement Allowance becomes due, but not thereafter, a Member under age sixty-five may elect to have the Member's Straight Life Retirement Allowance provided for under Component I equated on an Actuarial Equivalent basis to provide an increased Retirement Allowance payable to age sixty-two or age sixty-five, and to provide a decreased Retirement Allowance thereafter. The increased Retirement Allowance payable to such age shall approximate the total of the decreased Retirement Allowance payable thereafter and the estimated social security benefit. If a Member elects to receive increased and then decreased Retirement Allowance payments provided for in this paragraph, he or she may also elect to have such payments reduced by electing one of the optional forms of payment described above.

Disposition of Residue: If under a Joint and One Hundred Percent Survivor allowance, a Joint and Seventy-Five Percent Survivor allowance, a Joint and Fifty Percent Survivor allowance, or a Joint and Twenty-Five Percent Survivor allowance as provided above, both the Retiree and the Beneficiary die before they have received, in Retirement Allowance payments, an aggregate amount equal to the Retiree's Accumulated Mandatory Employee Contributions at the time of retirement, the difference between the said Accumulated Mandatory Employee Contributions and the aggregate amount of Retirement Allowances paid to the Retiree and Beneficiary, shall be paid in a single lump sum to such person or persons nominated by written designation of the Retiree duly executed and filed with the Board. If there are no such person or persons surviving the Retiree and the Beneficiary, any such difference shall be paid to the estate of the second to die of the Retiree or Beneficiary.

Rehire Before or After Retirement

A non-vested former member who is reemployed (except as a part time transit operator) within 6 years of termination may repay mandatory contributions. In such case, forfeited Credited Service and Vesting service are restored. If the member is reemployed more than 6 years following separation, mandatory contributions cannot be repaid. Vesting Service and Credited Service start over beginning with the date of reemployment.

A former member who is vested but has not yet begun to receive a Retirement Allowance and who is rehired prior to being separated for six years shall have the benefit pertaining to total Credited Service earned on and after July 1, 2014 calculated in accordance with the terms of Component I of the Retirement System in effect at the time of the last separation from service. If the former member has previously withdrawn mandatory accumulated contributions, and such withdrawn contributions are not repaid within two years of the rehire date, only the Credited Service earned on and after the rehire date shall be taken into consideration in determining the retirement allowance.

A former member who is vested but has not begun to receive a Retirement Allowance and who is rehired after being separated for more than six years shall be entitled to two separate and distinct pension benefits under Component I, each to be calculated in accordance with the provisions of Component I of the Retirement System in effect at the time of each separation from service. If the former member has previously withdrawn mandatory accumulated contributions, and such withdrawn contributions are not repaid within two years of the rehire date, only the Credited Service earned on and after the rehire date shall be taken into consideration in determining the retirement allowance.

Retirement benefits for a Retiree who returns to active full time employment with an Employer shall be subject to the following provisions:

- A Retiree who returns to work will have the Retirement Allowance suspended upon reemployment. The variable pension improvement factor (escalator) shall not be added to the amount of the original Retirement Allowance during the Retiree's re-employment period.
- A Retiree who returns to work will be entitled to receive a second Retirement Allowance in accordance with the provisions of the Retirement System in effect during the re-employment period.
- A Retiree's Average Final Compensation for purposes of determining the second Retirement Allowance will be based upon the Compensation earned by the Retiree after the return to work.
- An individual who retires for a second time will not be allowed to change the payment option selected with respect to the original Retirement Allowance. However, the individual may select a separate payment option with respect to the second Retirement Allowance.
- The Coordination of Benefits (Equated Social Security) option will not be available with respect to payment of the second Retirement Allowance.

SECTION H

GLOSSARY

Accrued Service The service credited under the plan which was rendered before the

date of the actuarial valuation.

Actuarial Accrued Liability (AAL)

The difference between the Actuarial Present Value of Future Benefits, and the Actuarial Present Value of Future Normal Costs.

Actuarial Assumptions

Assumptions about future plan experience that affect costs or liabilities, such as: mortality, withdrawal, disablement, and retirement; future increases in salary; future rates of investment earnings; future investment and administrative expenses; characteristics of members not specified in the data, such as marital status; characteristics of future members; future elections made by members; and other items.

Actuarial Cost Method

A procedure for allocating the Actuarial Present Value of Future Benefits between the Actuarial Present Value of future Normal Costs and the Actuarial Accrued Liability.

Actuarial Equivalent

Of equal Actuarial Present Value, determined as of a given date and based on a given set of Actuarial Assumptions.

Actuarial Present Value (APV)

The amount of funds required to provide a payment or series of payments in the future. It is determined by discounting the future payments with an assumed interest rate and with the assumed probability each payment will be made.

Actuarial Present Value of Future Benefits (APVFB)

The Actuarial Present Value of amounts which are expected to be paid at various future times to active members, retired members, beneficiaries receiving benefits, and inactive, nonretired members entitled to either a refund or a future retirement benefit. Expressed another way, it is the value that would have to be invested on the valuation date so that the amount invested plus investment earnings would provide sufficient assets to pay all projected benefits and expenses when due.

Actuarial Valuation

The determination, as of a valuation date, of the Normal Cost, Actuarial Accrued Liability, Actuarial Value of Assets, and related Actuarial Present Values for a plan. An Actuarial Valuation for a governmental retirement system typically also includes calculations of items needed for compliance with GASB No. 25, such as the Funded Ratio and the Annual Required Contribution (ARC).

Actuarial Value of Assets

The value of the assets as of a given date, used by the actuary for valuation purposes. This may be the market or fair value of plan assets or a smoothed value in order to reduce the year-to-year volatility of calculated results, such as the funded ratio and the actuarially required contribution (ARC).

Actuarially Determined Employer Contribution The employer's periodic required contributions, expressed as a dollar amount or a percentage of covered plan compensation, determined under the Plan's actuarial funding policy.

AFC

Average Final Compensation.

Amortization Method

A method for determining the Amortization Payment. The most common methods used are level dollar and level percentage of payroll. Under the Level Dollar method, the Amortization Payment is one of a stream of payments, all equal, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the Amortization payment is one of a stream of increasing payments, whose Actuarial Present Value is equal to the UAAL. Under the Level Percentage of Pay method, the stream of payments increases at the rate at which total covered payroll of all active members is assumed to increase.

Amortization Payment

That portion of the plan contribution or ARC which is designed to pay interest on and to amortize the Unfunded Actuarial Accrued Liability.

Amortization Period

The period used in calculating the Amortization Payment.

APTE

Association of Professional and Technical Employees.

ASF

Annuity Savings Fund of the Component II (Legacy) Plan.

Closed Amortization Period

A specific number of years that is reduced by one each year, and declines to zero with the passage of time. For example if the amortization period is initially set at 30 years, it is 29 years at the end of one year, 28 years at the end of two years, etc.

COLA

Cost of Living Adjustment. Analogous to a VPIF (see VPIF below).

Contribution Budgeting Liability

An expected return based measure of pension obligation.

D.O.T.

Department of Transportation.

Employer Normal Cost

The portion of the Normal Cost to be paid by the employer. This is equal to the Normal Cost less expected member contributions.

E.M.S.

Emergency Medical Service.

Equivalent Single Amortization Period For plans that do not establish separate amortization bases (separate components of the UAAL), this is the same as the Amortization Period. For plans that do establish separate amortization bases, this is the period over which the UAAL would be amortized if all amortization bases were combined upon the current UAAL payment.

Experience Gain/Loss

A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions, during the period between two actuarial valuations. To the extent that actual experience differs from that assumed, Unfunded Actuarial Accrued Liabilities emerge which may be larger or smaller than projected. Gains are due to favorable experience, e.g., the assets earn more than projected, salaries do not increase as fast as assumed, members retire later than assumed, etc. Favorable experience means actual results produce actuarial liabilities not as large as projected by the actuarial assumptions. On the other hand, losses are the result of unfavorable experience, i.e., actual results that produce Unfunded Actuarial Accrued Liabilities which are larger than projected.

Funded Ratio

The ratio of the Actuarial Value of Assets to the Actuarial Accrued

Liability.

GASB

Governmental Accounting Standards Board.

GASB No. 67 and GASB No. 68

These are the governmental accounting standards that set the accounting rules for public retirement systems and the employers that sponsor or contribute to them. Statement No. 68 sets the accounting rules for the employers that sponsor or contribute to public retirement systems, while Statement No. 67 sets the rules for the systems themselves.

GLWA

Great Lakes Water Authority.

Normal Cost

The annual cost assigned, under the Actuarial Cost Method, to the current plan year.

Open Amortization Period

An open amortization period is one which is used to determine the Amortization Payment but which does not change over time. In other words, if the initial period is set as 30 years, the same 30-year period is used in determining the Amortization Period each year. In theory, if an Open Amortization Period is used to amortize the Unfunded Actuarial Accrued Liability, the UAAL will never completely disappear, but will become smaller each year, either as a dollar amount or in relation to covered payroll.

POA

The 8th Amended Plan for the Adjustment of the Debt of the City of

Detroit.

POC

Pension Obligation Certificates.

Reserve Account

An account used to indicate that funds have been set aside for a specific

purpose and are not generally available for other uses.

SAAA

Senior Accountants, Analysts, and Appraisers Association.

Solvency Liability A market-based measure of the present value of accrued benefits at a

municipal bond discount rate unadjusted for the credit quality of the

plan sponsor.

Transition Cost Initial unfunded liability as described in Section E-16 of the plan

document.

Unfunded Actuarial Accrued Liability

The difference between the Actuarial Accrued Liability and Actuarial

Value of Assets.

Valuation Date The date as of which the Actuarial Present Value of Future Benefits are

determined. The benefits expected to be paid in the future are

discounted to this date.

VPIF Variable Pension Improvement Factor. Discussed in Section 6.2 of the

Plan Document. This is analogous to a post-retirement Cost of Living

Adjustment (COLA).

THE GENERAL RETIREMENT SYSTEM OF THE CITY OF DETROIT

ANNUAL ACTUARIAL VALUATION OF COMPONENT II JUNE 30, 2015

April 4, 2017

The Board of Trustees
The General Retirement System of the City of Detroit

Dear Board Members:

This report provides key results from the **Annual Actuarial Valuation** of the annuity and pension liabilities of the General Retirement System of the City of Detroit – Component II benefits. The date of the valuation was **June 30, 2015.**

The City of Detroit filed for bankruptcy on July 18, 2013. A final Plan of Adjustment ("POA") was confirmed on November 7, 2014 and the official exit from bankruptcy was on December 10, 2014. In connection with the POA, very significant changes were made to the benefits that the General Retirement System provides and to the contributions that it will receive. In particular, the benefits provided by the Retirement System were divided into two separate plans, referred to as "Component I" and "Component II." The benefits provided in each component are effective July 1, 2014 and are described in detail in Emergency Manager Order No. 44, dated December 8, 2014. In very general terms, Component I provides benefits for service rendered on and after July 1, 2014 and Component II provides benefits for service rendered prior to July 1, 2014.

This is the 2nd report issued covering Component II benefits. The results provided herein relate solely to the Component II benefits. Component I benefits will be the subject of a separate report. The purposes of the valuation are to measure the funding progress of Component II in accordance with the terms of the POA and to provide actuarially determined contribution amounts, given POA conditions and assumptions for Fiscal Year 2017 for Component II, for comparison with the contribution amounts provided in the POA. The results of the valuation are not applicable for other purposes. In particular, the information provided in this report is not suitable for financial reporting in connection with GASB Statement No. 67. Such information was provided in a separate report. Information regarding potential benefit restoration as allowed for in the POA will also be provided in a separate report at the Board's request.

The contribution amounts on page 3 include stipulated POA contributions plus two illustrative contribution amounts from alternate funding policies. Users of this report should be aware that contributions made at these amounts do not guarantee benefit security.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. Gabriel Roeder is not responsible for unauthorized use of this report.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as: plan experience differing from that anticipated by the economic and demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of the actuary's assignment, the actuary did not perform an analysis of the potential range of such future measurements.

The Board of Trustees April 4, 2017 Page 2

The valuation was based upon records maintained and furnished by the Retirement System staff concerning active members, retirees and beneficiaries, and financial accounts as of the valuation date. Data was checked for year-to-year consistency, but was not audited by the actuary. We are not responsible for the completeness or accuracy of the data. Certain necessary data was not available in time to produce the results in this report and it was necessary for us to use approximations. Please see related discussion in the Comments section of this report.

Data supplied by Retirement System Staff was provided separately for Component I and Component II (and from different source information). Data was reconciled between the Component I and Component II data provided, with the help of System staff. However, a number of manual changes were required to be made by the actuary to create member data files that were consistent between Component I and Component II. In order to expedite processing of the valuation, we recommend staff reconciles this data prior to providing it for the next valuation.

The assumptions used in the valuations concerning future experience are summarized in Section D of this report. Except for the assumed rate of investment return, the actuarial assumptions used for the valuation are set by the Board based upon advice of the actuary and other parties. The assumed rate of investment return was set to 6.75% in the POA and is therefore a "prescribed assumption set by another party" as discussed in Actuarial Standard of Practice No. 4. In our judgement, all of the actuarial assumptions used for the valuation are reasonable for purposes of the measurement.

This report has been prepared by individuals who have substantial experience valuing public sector retirement systems. To the best of our knowledge, this report is complete and accurate and was made in accordance with Actuarial Standards of Practice promulgated by the Actuarial Standards Board.

The signing individuals are independent of the plan sponsor.

David T. Kausch and Judith A. Kermans are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

This report does not evaluate the plan sponsor's ability or willingness to make contributions to the Retirement System. Given the funded level of Component II, plan sponsor contributions are critical if further benefit reductions are to be avoided. Employer contributions set forth in the POA are expected to lead to a decrease in the funded status over the next 7 years (as contemplated by the POA); even if all assumptions are met.

This report replaces our draft dated August 22, 2016. No results have changed. This final report contains some clarifying language.

Respectfully submitted,

David T. Kausch, FSA, EA, FCA, MAAA

David Touseh

VALUATION RESULTS

The expected contributions for fiscal year 2015 and beyond are provided in the POA. Subsequent to the POA, the DIA has entered into an agreement to pay part of its contribution requirement to the General Plan in a single lump sum payment. A revised contribution schedule (from Retirement System staff) showing actual fiscal year 2016 contributions as well as the DIAs future contribution requirements is shown below.

Contribution Source# (\$ millions)

		(4 111110115)											
)WSD ilities		For Other Liabilities									
										Trar	ısfers		
Fiscal Year	DWSD	Transfers	UTGO		State*		DIA		Other	from 1	DWSD	1	Total
2016	\$ 45.4	\$ (2.5)	\$ 4.0	\$	-	\$	32.9	\$	22.5	\$	2.5	\$	104.8
2017	45.4	(2.5)	4.0		-		0.4		22.5		2.5		72.3
2018	45.4	(2.5)	3.9		-		0.4		22.5		2.5		72.2
2019	45.4	(2.5)	3.7		-		0.4		22.5		2.5		72.0
2020	45.4	(2.5)	3.7		-		0.4		2.5		2.5		52.0
2021	45.4	(2.5)	3.6		-		0.4		2.5		2.5		51.9
2022	45.4	(2.5)	2.3		-		0.4		2.5		2.5		50.6
2023	45.4	(2.5)	2.0		-		0.4		2.5		2.5		50.3

^{*} The State's scheduled contributions ended in 2015.

We have assumed the contributions outlined above will not change. Further, it was assumed that all contributions will be made to the System by the City, regardless of the source. For example, it was assumed that the UTGO paid the City \$4 million in 2016 and the City contributed \$4 million to the Retirement System. An estimate of the probability of those payments being made was outside the scope of this project, not required by Actuarial Standards and, therefore, was not made.

In order to develop actuarial contribution rates in accordance with POA provisions and assumptions, we were instructed to allocate the above contributions to the various divisions. This was done by allocating DWSD transfer amounts to the General City division and remaining DWSD contributions to the DWSD division; allocating \$2.5 million per year to the Library; and allocating remaining contributions to DOT and General in proportion to their unfunded liabilities. The chart below shows this allocation.

	General	D.O.T.	Subtotal	Library	DWSD	Totals
	\$ Thousands					
Unfunded Liabilities	\$ 507,917	\$ 183,193	\$ 691,110	\$ 19,434	\$ 297,292	\$ 1,007,836
% of Subtotal	73.5%	26.5%	100.0%	N/A	N/A	
FY 2016 Contributions	\$ 41,812	\$ 15,081	\$ 56,893	\$ 2,500	\$ 45,400	\$ 104,793
Transfers	\$ 2,500	\$ -	\$ 2,500	\$ -	\$ (2,500)	\$ -
FY 2016 UAL Contributions	\$ 44,312	\$ 15,081	\$ 59,393	\$ 2,500	\$ 42,900	\$ 104,793

A different allocation procedure would produce different results. If a different allocation procedure should be used, please let us know and we will revise this report.

[#] Subsequent to the issuance of the Draft valuation report, certain contributions reflected in this schedule were accelerated. The accelerated schedule will be reflected in the next valuation report.

VALUATION RESULTS (CONTINUED)

Unfunded Actuarial Accrued Liability⁺

	(\$ millions)									
	G	eneral							5	System
		City		D.O.T.		DWSD		Library		Total
UAAL* as of June 30, 2015	\$	507.9	\$	183.2	\$	297.3	\$	19.4	\$	1,007.8
Anticipated POA Contribution (EOY)		44.3		15.1		42.9		2.5		104.8
Anticipated Expenses@		-		-		-		-		-
Interest at 6.75%		34.3		12.4		20.1		1.3		68.0
Projected UAAL* as of June 30, 2016	\$	497.9	\$	180.5	\$	274.5	\$	18.2	\$	971.1
Anticipated POA Contributions for FY2017		20.4		6.5		42.9		2.5		72.3
Estimated Employer Contributions for FY 2024 #!	\$	68.6	\$	25.6	\$	6.6	\$	0.7	\$	101.5

Totals may not add due to rounding.

- * Unfunded Actuarial Accrued Liability.
- @ In accordance with Plan Document, the mandated 6.75% rate of return is net of investment and administrative expenses.
- # Assuming the POA contributions through 2023 and a 30-year level principal closed amortization thereafter. When determining the Fiscal Year 2024 illustrative amounts, only the total contributions and the DWSD contributions are stipulated in the POA. The remaining amounts were allocated to the other groups as described on page 1. A different allocation would result in different results by group.
- + Because no service is being accrued in Component II, no normal cost contribution is needed.
- ! Total employer contributions, including amounts paid by employer but funded from other sources as required by POA.

The POA contributions result in a defunding of the plan between now and June 30, 2023, which was contemplated by the POA. In fact, the anticipated POA contributions do not project benefit restoration even if all assumptions are met (including the POA mandated assumed rate of return of 6.75%). Also, the 2017 to 2019 contributions only marginally exceed the amount of nominal interest that accrues on the UAAL. The Estimated Employer Contribution for FY 2024 is based on a projection of results assuming only the POA contributions are made and all future experience between the valuation date and FY 2024 is as assumed. Actual experience will result in changes to this estimate and the final result (from the June 30, 2023 actuarial valuation) could be materially different than shown above.

Contributions expected to be paid in FY 2016 include the lump sum payment of the majority of the DIA's obligation under the POA (see updated schedule of POA contributions on prior page). The lump sum also includes the present value of an amount due in FY 2024 from the DIA, resulting in a decrease in the FY 2024 contribution estimate of \$0.4 million.

We understand the City has set aside additional money to be contributed to one of the pension plans in the future. This money has not been taken into account in this valuation.

VALUATION RESULTS (CONTINUED)

At the request of the Board, in addition to the status valuation calculations on page 2, we illustrate what the funding requirements would be if the FY 2016 contributions were determined by an actuarial valuation.

In the chart below, we illustrate two alternate funding policies for FY 2017. The first policy is an illustration of funding the UAAL over the expected remaining active service life of this group. The second policy is similar to the Board's existing (pre-bankruptcy) policy, but modified to prevent insolvency (based on Plan assumptions) prior to the end of the funding period. The illustrations are intended to show that there are a broad range of possible policies, but are not intended to show a specific recommendation or a minimum (or maximum) level of contributions.

Funding Policy 1 is based on amortizing the UAAL over the average remaining service life of active members (7 years for DOT; 8 years for all other groups) using level dollar amortization.

Funding Policy 2 is based on amortizing the UAAL with level principal payments over a closed 30-year period plus interest. This method is also known as level principal declining interest amortization.

(\$ millions) General System D.O.T. DWSD Library City Total (1) Illustrative Contribution for FY 2017 (Funding Policy 1) 82.6 33.2 45.5 \$ 3.0 164.3 (2) Illustrative Contribution for FY 2017 (Funding Policy 2) 50.2 18.2 27.7 1.8 97.9 2.5 (3) Actual Contributions for FY 2017 (POA) 20.4 6.5 42.9 72.3 \$ 62.2 0.5 Fiscal Year 2017 Shortfall - Funding Policy 1: (1) - (3) 26.7 2.6 92.0 Fiscal Year 2017 Shortfall - Funding Policy 2: (2) - (3) 29.8 11.7 (15.2) \$ (0.7) \$ 25.6

Illustrative Contribution Shortfall

Recommendation: We recommend that additional contributions be made to the Component II Plan. While contributions made at levels under Funding Policy I or 2 do not guarantee benefit security of Plan members, increasing contributions would potentially increase the benefit security of Plan members.

VALUATION RESULTS (CONTINUED)

Present Value	June 30, 2015	June 30, 2014

Accrued Assets	2,131,278,208	2,015,207,879
Unfunded Actuarial Accrued Liabilities	\$1,007,836,476	\$1,207,144,197

VALUATION RESULTS (CONCLUDED)

FUNDED RATIO - POA

		Defined Benefit	ASF	Total
A	Actuarial Accrued Liability	\$2,953,306,942	\$185,807,742	\$3,139,114,684
В	Market Value of Assets	\$1,945,470,466	\$185,807,742	\$2,131,278,208
C	Unfunded Actuarial Accrued Liability (A-B)	\$1,007,836,476	\$ 0	\$1,007,836,476
D	Funded Ratio (B/A)	65.9%	100.0%	67.9%

The POA Liability amount above is an expected return-based measurement of the pension obligation. It is based upon the mandated 6.75% interest rate assumption (assumption prescribed by another party). It estimates an amount that will be sufficient to provide benefits if the portfolio earns the expected 6.75% return on assets and all other assumptions are met. This measure is appropriate for assessing the need for or amount of future contributions (if all assumptions are met). This measure is not appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligation, in other words, of transferring the obligation to a third party in a market value type transaction.

FUNDED RATIO - SOLVENCY

		Defined Benefit	ASF	Total
A	Market-Based Liability	\$4,015,789,679	\$185,807,742	\$4,201,597,421
В	Market Value of Assets	\$1,945,470,466	\$185,807,742	\$2,131,278,208
C	Unfunded Actuarial Accrued Liability (A-B)	\$2,070,319,213	\$ 0	\$2,070,319,213
D	Funded Ratio (B/A)	48.4%	100.0%	50.7%

The Solvency value is a market-based measurement of the pension obligation. It estimates the amount the plan would need to invest in low risk securities to provide the benefits with greater certainty. For this purpose, the solvency liability is computed at 3.80% as of June 30, 2015, based on the long-term municipal bond rate ("State & local bonds" rate from Federal Reserve statistical release (H.15) as of June 25, 2015). We are not able to assess the credit quality of the plan sponsor and, as such, no adjustment has been made for the credit quality of the plan sponsor. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligation.

The difference between the two measures illustrates the savings the sponsor anticipates by taking on the risk in a diversified portfolio.

COMMENTS

Experience

Experience was more favorable than assumed during the year ending June 30, 2015. The chart below shows the estimated gain by division.

Development of Actuarial Gain/(Loss)

	(\$ millions)									
	G	eneral							S	ystem
		City	I	D.O.T.		DWSD]	Library		Total
(1) UAAL as of June 30, 2014	\$	610.2	\$	217.1	\$	352.4	\$	27.4	\$	1,207.1
(2) Actual POA Contribution (EOY)		118.2		25.3		42.9		2.9		189.3
(3) Interest at 6.75%		41.2		14.7		23.8		1.9		81.5
(4) Projected UAAL* as of June 30, 2015	\$	533.2	\$	206.5	\$	333.3	\$	26.4	\$	1,099.3
(5) Actual UAAL* as of June 30, 2015		507.9		183.2		297.3		19.4		1,007.8
Gain (Loss): (4) - (5)	\$	25.3	\$	23.3	\$	36.0	\$	6.9	\$	91.5

^{*} Unfunded actuarial accrued liability.

The main sources of gains and losses were (in descending order of magnitude):

- Revisions in the value of the ASF clawback: Gain
- Retiree Data (including removal of a COLA reported in the June 30, 2014 data): Gain
- Investment Return: Loss
- Refund of pre-paid fees: Gain
- Active data, including newly reported members: Loss

Demographic (census) experience was, in total, close to assumed. There was a mortality gain that was offset by losses related to retirement, disability, and vested terminations experience.

The estimated FY 2024 contributions are very sensitive to changes in year-to-year experience. The chart below reconciles our estimate from the June 30, 2014 valuation to our estimate from this valuation (June 30, 2015).

Reconciliation of Projected June 30, 2024 Contributions

		(\$ millions)							
	G	eneral						System	
		City		D.O.T.		OWSD	Library	Total*	
Estimated FY 2024 Employer Contribution from 6/30/14 Valuation	\$	73.4	\$	28.1	\$	12.7	\$ 3.6	\$ 117.8

Other FY 16 Contributions Above Expected		-		-		-	-	-	
Reallocation of Library Contributions		1.2		0.6		-	(1.8)	-	
Experience Gain of \$91.5 Million		(4.3)		(4.0)		(6.1)	(1.2)	(15.6)	
Actual FY 15 Contribution above Expected		(1.4)		1.0		-	0.2	(0.2)	
Estimated FY 2024 Employer Contribution from 6/30/15 Valuation	\$	68.6	\$	25.6	\$	6.6	\$ 0.7	\$ 101.5	

^{*}Totals may not add due to rounding.

COMMENTS (CONTINUED)

ASF Clawback Data

ASF clawback data reported for the June 30, 2014 valuation resulted in an estimated reduction in pension liabilities of approximately \$110 million. For the June 30, 2015 valuation, the values of the clawbacks were included in the assets as either deposits or receivables. We understand that the amounts included in the assets were determined by the System's auditors in accordance with GAAP accounting. We, therefore, made no adjustment to the June 30, 2015 liabilities for the ASF clawback. This change in data method resulted in a reduction in the UAAL of approximately \$74 million.

ASF Interest Credits

The ASF fund cannot be credited with more than 5.25% (or the total fund earnings if less). We understand that any future arbitrage that may result will be transferred to Component I assets (to the extent needed for funding Transition Liabilities) and, therefore, we did not model any arbitrage as part of this valuation. The estimated present value of future transfers may be modelled at the Board's request. Any adjustment to the Component II liability would be equally offset by a receivable Component I asset.

Data Issues and Approximations

The data provided for this valuation did not reflect the plan freeze or the various cuts to active member benefits that were instituted in connection with the POA. Consequently, it was necessary for us to use approximations to estimate the frozen accrued benefits. While in our judgement the approximations are reasonable, an estimate of the potential range of error in those approximations could not be performed without considerable additional work and, therefore, was outside the scope of this study. It is important that complete data be provided as soon as possible to minimize the probability of an important decision being made based upon wrong information. We would be pleased to redo this valuation with revised data if such can be made available. For active members, AFC amounts and total service as of June 30, 2015 were reported. For purposes of this valuation, we matched the June 30, 2015 actives to the active data reported for June 30, 2014 to obtain the AFC and benefit service amounts as of June 30, 2014.

Actuarial Assumptions

The System routinely has five-year experience studies in accordance with the ordinance. The last scheduled experience study for the period from July 1, 2007 through June 30, 2012 was postponed due to the bankruptcy. Moreover, since the uncertainty at the City during the bankruptcy may have led to member behavior that was not representative of long-term trends, we conducted a review of the mortality assumption only in 2013. We recommend that the System return to its prior periodic schedule for the next experience study for the period from July 1, 2012 through June 30, 2017. Alternatively, in order to avoid distortions from the bankruptcy, the next experience study could be scheduled to begin after the city emerged from bankruptcy such as July 1, 2015 through June 30, 2020.

COMMENTS (CONCLUDED)

Restoration

This valuation assumes no future restoration of Component II benefits (consistent with the expectation of the POA). Any future restoration will be reflected beginning in the next valuation after being granted.

DWSD (Water/Sewer) Projections

Based on this valuation, the DWSD (Water/Sewer) division is not expected to be fully funded by 2024. As a result, their contributions will continue in FY 2024 (see page 2 for estimated FY 2024 contributions).

Future Results

While FY 2016 investment performance has not yet been provided to us, the S&P 500 and the DOW both returned less than 3% for the year. If the Retirement System's experience is similar, this will result in downward pressure on the funded status and upward pressure on the FY 2024 contribution requirements (above what is shown in this report).

The POA mandated contributions for FY 2017 and beyond are expected to defund the Retirement System, even if all assumptions are realized. In FY 2017, the POA mandated contributions marginally exceed interest on the projected UAAL. This defunding was contemplated in the POA.

Recommendation 1

We recommend that every potential action be taken to generate contributions to the Retirement System above and beyond those provided in the POA.

Recommendation 2

We recommend that a study be undertaken to develop a funding policy for FY 2024 and beyond. The increase in contributions that is expected at that time is so significant that it cannot be ignored until then (even though this is contemplated in the POA). All stakeholders should agree on the funding method well before that date comes. If not, there could be a significant risk of contribution defaults and/or benefit insecurity.

Recommendation 3

We recommend that the System compute frozen accrued benefits as soon as possible and report them to the Actuary for the June 30, 2016 valuation. If important decisions are to be made based on this valuation, we recommend further that the valuation be redone based upon actual computed frozen accrued benefits.

Conclusion

The POA contributions fall short of contributions that would result from either of the funding policies illustrated in this report. Given those contributions, and the fact that FY 2016 will likely show an investment loss, the funding status is expected to decline in the next valuation. The FY 2024 contribution is expected to be very high compared to City contributions in the immediately preceding years. Planning for the FY 2024 contribution level is very important.

Group Averages:

Age: 49.6 years Service: 16.4 years Annual Pay: \$42,816

Service shown in this schedule is vesting/eligibility service as of June 30, 2015. Frozen benefit service as of June 30, 2014 was not provided in the June 30, 2015 data and was estimated from the data previously submitted for the June 30, 2014 valuation.

EXPECTED TERMINATIONS FROM ACTIVE EMPLOYMENT FOR CURRENT ACTIVE MEMBERS

The chart shows the expected future development of the present population in simplified terms. The Retirement System presently covers 4,688 active members. Eventually, 306 people are expected to terminate covered employment prior to retirement and forfeit eligibility for an employer provided benefit. 4,021 people are expected to receive monthly retirement benefits either by retiring directly from active service, or by retiring from vested deferred status. 361 people are expected to become eligible for benefits as a result of death-in-service or disability.

Actual verses expected retirements for the 2015 fiscal year is shown below:

Year Ended June 30,	Expected	Actual
2015	233	189

SUMMARY OF ASSUMPTIONS AND METHODS USED FOR ACTUARIAL VALUATIONS ADOPTED BY BOARD OF TRUSTEES

All assumptions are estimates of future experience except as noted. The rationale for the assumptions is based on experience studies where noted.

Economic Assumptions

The investment return rate used in making the valuation was 6.75% per year, compounded annually (net after investment and administrative expenses). This assumption is prescribed by the Eighth Amended Plan for the Adjustment of Debts of the City of Detroit (POA).

Price inflation is not directly used in the valuation. For purposes of assessing the reasonability of the investment return assumptions, we assumed price inflation of 2.25% per year.

Non-Economic Assumptions

The mortality table used to measure retired life mortality was 100% of the RP-2014 Blue Collar Annuitant Table for set-forward 1 year for males and 100% of the RP-2014 Blue Collar Annuitant Table set-forward 1 year for females. Tables were extended below age 50 with a cubic spline to the published Juvenile rates. Pre-retirement mortality is based on the corresponding Employee tables with corresponding set forward. The tables are projected to be fully generational, based on the 2-dimensional, sex distinct mortality improvement scale MP-2014 (which was published and intended to be used with RP-2014). This table was first used as of June 30, 2014. For disabled members, the same tables are used. The rationale for the mortality assumption is based on the 2008-2013 Mortality Experience Study issued February 4, 2015.

The probabilities of retirement for members eligible to retire are shown on pages 21 and 22. These probabilities were revised for the June 30, 2008 valuation. The rationale is based on the 2002-2007 Experience Study.

The probabilities of separation from service (including *death-in-service* and *disability*) are shown for sample ages on page 23. These probabilities were revised for the June 30, 2008 valuation. The rationale is based on the 2002-2007 Experience Study.

SUMMARY OF ASSUMPTIONS AND METHODS USED FOR ACTUARIAL VALUATIONS ADOPTED BY BOARD OF TRUSTEES

Funding Methods

The unit credit cost method was used in determining age & service pension liabilities, vesting liabilities, and casualty pension liabilities. Under this method, there is no normal cost since benefits are frozen and there are no future accruals and actuarial accrued liability is the present value of each individual's accrued benefit.

Unfunded Actuarial Accrued Liabilities. Actual employer contributions through June 30, 2023 are set by the POA. The amortization period and method after 2023 has not yet been established by the Board.

Employer contribution dollars were assumed to be paid at the end of the employer fiscal year.

Present assets are set equal to the Market Value.

The data about persons now covered and about present assets were furnished by the System's administrative staff. Although examined for general reasonableness, the data was not audited by the Actuary.

Ref	537	1648	1647

Rationale for assumption is 2002 to 2007 Experience Study. Additional retirement rates for Component I (Hybrid Plan) eligibility are not reflected in this valuation due to materiality. The current assumption contains a margin for adverse experience.

MISCELLANEOUS AND TECHNICAL ASSUMPTIONS

Benefit Service Exact Fractional service is used to determine the amount of

benefit payable.

Decrement Operation Disability and mortality decrements do not operate during the

first 5 years of service. Disability and withdrawal do not

operate during retirement eligibility.

Decrement Timing Decrements of all types are assumed to occur mid-year.

Eligibility Testing Eligibility for benefits is determined based upon the age nearest

birthday and rounded service on the date the decrement is

assumed to occur.

Forfeitures None.

Incidence of Contributions Contributions are assumed to be received at the end of the year.

Marriage Assumption 100% of males and 100% of females are assumed to be married

for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses for active

member valuation purposes.

Normal Form of Benefit Straight life is the normal form of benefit. Straight life is

generally the most valuable under valuation assumptions. Actuarial equivalent factors are based on 7.5% interest and

1984 Group Annuity Mortality table.

Service Credit Accruals Service accruals stop as of June 30, 2014 for measurement of

Component II liabilities. However, future service in Component I may be used to satisfy benefit eligibility requirement in

Component II.

Administrative Expenses The investment return assumption is mandated to be net of

administrative expense in the plan document. No other provision for administrative expenses is included in this

valuation.

Sick Leave As of June 30, 2014, this information was included in the 2014

AFC amounts.

AFC Adjustment Reported 2014 AFC amounts were increased by 2.0% for active

members due to data discrepancies related to the reported AFC. This adjustment was made based on discussions with System staff

and the System's auditor.

Member Contributions Member contributions to this Component II plan are assumed to

have ceased with the bankruptcy.

Rationale for assumption is 2002 to 2007 Experience Study, modified as necessary for changes in data or administration.

RECONCILIATION OF RAW DATA

ACTIVE MEMBERS

A) Number reported in GC_Benefits table: 5,145 B) Number reported as inactive (status = F): C) Vested members returning to work: D) Records for 36th District Court Judges: (27)E) Active members hired after June 30, 2014: (490)F) Members retired/terminated vested after 6/30/2015 and not reported in 2015 active data (valued using 2014 active data): 67 G) Number of defective records: (7) 4,688 H) Number of records to value:

INACTIVE VESTED MEMBERS

A) Number of records reported on data file: 2,859

B) Records with service less than 8 years: (113)

C) Also listed as retired: (25)

B) Number of records in P/F plan: (15,097)

C) Records not currently in receipt of benefits: (13,701)

D) Number of defective records:
E) Number of records valued: 11,884

SUMMARY OF BENEFIT PROVISIONS EVALUATED

Component II Frozen Benefits

All Component II benefits are frozen as of June 30, 2014 based on service and average final compensation accrued as of that date and the provisions of the Detroit General Retirement System as it existed on June 30, 2014. Frozen benefits are further reduced by 4.5% and all future cost-of-living adjustments ("COLA's") were eliminated. Benefits resulting from the Annuity Savings Fund and benefits paid from the Annuity Reserve Fund were subject to a separate reduction described as a "Claw-back." Details of the claw-back provision are complicated and can be found in the Eighth Amended Plan of Adjustment. The benefits evaluated in this report are the frozen reduced benefits after the claw-back. Component II benefits are payable after separation from service, upon meeting the eligibility conditions of the plan as it existed on June 30, 2014, regardless of whether the individual is eligible to receive a Component I benefit at that time.

Our understanding of the June 30, 2014 plan provisions is provided below for completeness. The material below does not have legal standing and is not intended to cover all potential situations that could occur. If there are discrepancies between the description below, and appropriate legal documents, the latter necessarily govern.

Age and Service Pension

Eligibility - Any age (minimum age 55 for non-EMS members hired after 1995) with 30 years of service (25 for EMS members), or age 60 with 10 years of service, or age 65 with 8 years of service.

Annual Amount - EMS Members: Sum of a) a basic pension of \$12 for each of the first 10 years of service, plus b) a pension equal to 2.0% of AFC multiplied by years of service. Maximum benefit is 90% of AFC. Other Members: Sum of a) a basic pension of \$12 for each of the first 10 years of service, plus b) a pension equal to the first 10 years of service multiplied by 1.6% of AFC, plus 1.8% of AFC for each year of service greater than 10 years up to 20 years, plus 2.0% of AFC for each year of service greater than 20 years up to 25 years, plus 2.2% of AFC for each year of service greater than 25 years. Future benefit accruals for certain active members (depending on bargaining unit) were reduced to 1.5% of final average compensation per year of service.

Type of Average Final Compensation (AFC) - Highest 3 consecutive years out of the last 10. Pension benefits will not be diminished if compensation is reduced because of a fiscal emergency. Effective July 1, 1999, in computing the AFC, a member shall have the option of adding the value of 25% of unused accrued sick leave to the earnings used in computing the AFC. Longevity is added to AFC in accordance with the following schedule: \$150 after 5 years, \$300 after 10 years, \$450 after 15 years, \$600 after 20 years, and \$750 after 25 years.

Early Retirement

Eligibility - Any age with 25 or more years of service (min. age 55 for members hired after 1995).

Annual Amount - Same as regular retirement but actuarially reduced.

SUMMARY OF BENEFIT PROVISIONS EVALUATED (CONTINUED)

Deferred Retirement (Vested Benefit)

Eligibility - Hired prior to 7-1-80: Age 40 with 8 years of service. Hired on or after 7-1-80: Any age with 10 years of service.

Benefit Commencement - APTE hired prior to July 1, 1988: Benefit begins at the age the member would have become eligible for regular retirement if service had continued. SAAA, Non-Union and lawyers hired prior to June 30, 1986: Benefit begins at the age the member would have become eligible for regular retirement. Others: Benefits based on service rendered by June 30, 1986 begin at the age the member would have become eligible for regular retirement. Benefits based on service rendered after July 1, 1986 begin at age 62.

Annual Amount - Same as regular retirement but based on average final compensation and service at the time of termination.

Duty Disability Retirement

Eligibility - Service related disability before age 60. No service requirement.

Annual Amount - An annuity which is the actuarial equivalent of the accumulated contributions at date of disability plus a pension of two-thirds of average final compensation at time of disability. The maximum annual pension is \$9,000. At the earliest of when the member would have accrued 30 years of service credit (25 for EMS) or age 60, the annuity is recomputed assuming contributions would have continued at a salary level equal to final compensation. The pension is recomputed with additional service credit granted from the date of disability to age 60 (or 30 years of service credit) with no maximum.

Non-Duty Disability Retirement

Eligibility - Disability from any cause before age 60 with 10 or more years of service.

Annual Amount - Computed in the same manner as a regular retirement benefit. Maximum annual pension to age 60 is \$6,000. Benefit is recomputed at age 60 with no maximum.

Duty Death Before Retirement

Eligibility - Death from service related causes. No age or service requirements.

Annual Amount - One-third of final compensation to the surviving spouse for life or until remarriage, plus an equal share of 1/4 of final compensation to each unmarried child under age 18. If there is no eligible spouse, eligible children each receive 1/4 of final compensation; if there are more than 2 such children, each child shares an equal part of 1/2 of final compensation. Maximum total amount for spouse and children is \$9,000 annually. If there is no eligible spouse or children, dependent parents each receive 1/6 of deceased's final compensation, to a total maximum of \$600 annually.

SUMMARY OF BENEFIT PROVISIONS EVALUATED (CONCLUDED)

Non-Duty Death Before Retirement

Eligibility - Death-in-service at any age with 15 years of service; or after age 60 with 10 years of service; or after age 65 with 8 years of service.

Annual Amount - To Surviving Spouse: Computed as a regular retirement benefit but reduced in accordance with a 100% joint and survivor election for members with 20 or more years of service. For members with 15 years of service but less than 20, benefit is reduced in accordance with a 50% joint and survivor election. To Dependent Children if no Surviving Spouse: \$9,000 payable to age 19 of the youngest child or for life if child is physically or mentally impaired for members with 20 or more years of service (\$6,000 if less than 20 years of service).

Post-Retirement Cost-of-Living Adjustments

Benefit is increased annually by 2.25% of the **original** pension amount at retirement. Post-retirement cost-of-living increases were eliminated on future accruals for certain active members (depending on bargaining unit).

Member Contributions

Members have the option of choosing one of four contribution amounts: (1) 0%; (2) 3.0% of compensation up to the Social Security wage base, plus 5.0% of compensation in excess of the Social Security wage base; (3) 5.0% of total compensation; or (4) 7.0% of total compensation. Member contributions can be paid as a lump sum or annuitized at retirement to provide an annuity in addition to the pension (which is not affected by the level of member contributions).

SECTION F GLOSSARY

GLOSSARY

Actuarial Accrued Liability. The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as "accrued liability" or "past service liability."

Accrued Service. The service credited under the plan which was rendered before the date of the actuarial valuation.

Actuarial Assumptions. Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method. A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future plan benefits" between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the "actuarial funding method."

Actuarial Equivalent. A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

Actuarial Present Value. The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

AFC. Average Final Compensation.

Amortization. Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

APTE. Association of Professional and Technical Employees.

GLOSSARY

Contribution Budgeting Liability. An expected return based measure of pension obligation.

DIA. Detroit Institute of Art.

D.O.T. Department of Transportation.

DWSD. Detroit Water and Sewerage Department.

EMS. Emergency Medical Service.

Experience Gain (Loss). A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

GASB. The Governmental Accounting Standards Board.

Normal Cost. The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as "current service cost." Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

POA. The 8th Amended Plan for the Adjustment of the Debt of the City of Detroit.

Reserve Account. An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

SAAA. Senior Accountants, Analysts, and Appraisers Association.

Solvency Liability. A market-based measure of the present value of accrued benefits at a municipal bond discount rate unadjusted for the credit quality of the plan sponsor.

Unfunded Actuarial Accrued Liability. The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as "unfunded accrued liability."

UTGO. Unlimited Tax General Obligation.

Valuation Assets. The value of current plan assets recognized for valuation purposes.
