March, 2005

The Retirement Board
Michigan State Employees’ Retirement System
General Office Building, Third Floor
P.O. Box 30171

Lansing, Michigan 48909
Dear Board Members:
We are pleased to present this report on our actuarial valuation of the Michigan State Employees' Retirement System (the "System") as of September 30, 2004, the sixth-first annual actuarial valuation of the System.

Our 2004 actuarial valuation of the System is based on the present provisions of the State Employees' Retirement Act; membership and financial data as of September 30, 2004; and the actuarial assumptions and cost methods described in Section V.

This report on our 2004 actuarial valuation of the System is presented in the following sections:
Section Page
I. INTRODUCTION ..... 1
II. RESULTS OF ACTUARIAL VALUATION ..... 2
III. FINANCIAL EXPERIENCE ..... 13
IV. MEMBERSHIP CHARACTERISTICS ..... 17
V. ACTUARIAL ASSUMPTIONS AND FUNDING METHOD ..... 27
VI. SUMMARY OF SYSTEM PROVISIONS ..... 36
VII. ACCOUNTING INFORMATION ..... 39
APPENDIX: ACTUARIAL VALUATION STATEMENT

We look forward to meeting with you to review this report on our 2004 actuarial valuation of the System.
Sincerely,
The Segal Company

Michael Karlin, F.S.A., M.A.A.A.
Senior Vice President \& Actuary

## I. INTRODUCTION

Actuarial valuations of the Michigan State Employees’ Retirement System (the "System") are prepared annually to determine the actuarial condition of the System and the employer contribution rates required to fund the System on an actuarial reserve basis. The calculated employer contribution rates derived from this actuarial valuation as of September 30, 2004 are based on the present provisions of the State Employees' Retirement Act.

A total of 87,765 System members are included in this 2004 actuarial valuation. The total membership is comprised of 34,749 active members, 7,397 inactive vested members, and 45,619 retirants and beneficiaries. As of September 30, 2004, the assets of the System amounted to over $\$ 9.46$ billion at market value. Of this amount, the portion used to fund pension benefits was $\$ 9.43$ billion at market value and $\$ 10.15$ billion at actuarial value.

In addition to utilizing current membership and financial data, an actuarial valuation requires the use of a series of assumptions regarding uncertain future events. The assumptions used in the 2004 actuarial valuation of the System were revised this year based on an actuarial experience investigation covering the period from September 30, 1997 through September 30, 2002. These assumptions were first adopted by the Retirement Board and the Department of Management and Budget for the 2004 valuation.

Based on our actuarial valuation as of September 30, 2004, the calculated employer contribution rate for pension benefits increased by $2.19 \%$ of payroll, from $14.12 \%$ to $16.31 \%$. More details concerning these calculations are shown in Section II.

## II. RESULTS OF ACTUARIAL VALUATION

Our actuarial valuation of the Michigan State Employees' Retirement System as of September 30, 2004 is based on four major elements:

1. The present benefit provisions of the System, as governed by Act 240 of 1943, as amended (see Section VI).
2. The characteristics of active and inactive System members as of September 30, 2004 (see Section IV).
3. The pension assets attributable to System members, which amounted to a total of approximately $\$ 9.46$ billion at market value ( $\$ 9.43$ billion for pension benefits and $\$ 33.9$ million for retiree health) as of September 30, 2004 (see Section III).
4. The actuarial assumptions and funding method, which include an investment yield rate of $8 \%$ and the entry age actuarial cost method (see Section V). New actuarial assumptions were adopted for the 2004 valuation, based on the results of an actuarial experience investigation covering the period from September 30, 1997 through September 30, 2002.

Employer contributions are calculated separately for three groups of covered employees: (1) Corrections Officers; (2) Conservation Officers; and (3) all other employees. Table 1 presents the actuarially-determined employer contribution rates for the current and the prior two years, with the additional requirement for Corrections Officers and Conservation Officers identified.

The employer contribution rate has been determined based on the entry age normal funding method. Under the entry age normal cost funding method, the total employer contribution is comprised of the normal cost plus the level annual percentage of payroll payment required to amortize the unfunded actuarial accrued liability over 40 years from October 1, 1996 (32 years remaining from October 1, 2004). The employer normal cost is, for each employee, the level percentage of payroll contribution (from entry age to retirement) required to accumulate sufficient assets at the member's retirement to pay for his or her projected benefit.

The actuarial accrued liability represents the difference between the present value of all future benefits and the present value of future normal costs. The unfunded (or overfunded) actuarial accrued liability (i.e., the actuarial accrued liability less assets accumulated as of the valuation date), is then amortized as noted above. Each of these components of the employer contribution rate (i.e., normal cost and amortization payment) is shown separately in Table 1.

The total employer contribution rate (for pension benefits) for all employees increased from $14.12 \%$ to $16.31 \%$ of total payroll between the 2003 and 2004 actuarial valuations. The 2.19\% of payroll increase in the total rate resulted from a $0.13 \%$ decrease in the normal cost rate $(8.18 \%$ to $8.05 \%)$ and a $2.32 \%$ increase in the amortization payment as a percentage of payroll (from $5.94 \%$ to $8.26 \%$ ). Table 1 provides further details concerning the components of the employer contribution rate for the 2003 and 2004 valuations.

Under the entry age funding method, actuarial gains or losses affect the actuarial accrued liability and, therefore, the amortization payment on the unfunded actuarial accrued liability. Table 2 shows the unfunded actuarial accrued liability for each of the past two fiscal years, and the derivation of the actuarial gain or loss for each year. Note that, for fiscal 2004, an experience loss of $\$ 560.2$ million was realized (consisting of a $\$ 538.7$ million loss due to investments, along with a loss of $\$ 21.5$ million due to demographic factors). This compares to a loss of $\$ 460.9$ million in the prior year (consisting of a $\$ 442.9$ million loss due to investments, along with a loss of $\$ 18.0$ million due to demographic factors). Table 3 shows the detailed components of the demographic loss.

Table 4 shows the actuarially-determined percent of payroll employer contribution rates over the past 17 years. Also shown are the actual contribution and actual payroll for each year. Table 5 presents an actuarial balance sheet for the System (pension benefits) as of September 30, 2004 (and 2003).

There is no single all-encompassing test for measuring a retirement system's funding progress and current funded status. However, some common indicators of the progress that a system has achieved in funding their obligations include observing the changes over time in the following items:
1.The ratio of valuation assets to actuarial accrued liabilities.
2. The pattern of the unfunded actuarial accrued liability as a percentage of active payroll.
3. The ratio of valuation assets to the actuarial present value of vested benefits (computed as if the system were terminated on the valuation date).
4. A comparison of the plan's present assets (at actuarial value) with (1) active member contributions on deposit, (2) liabilities for future benefits to retired lives, and (3) the actuarial accrued liabilities for service already rendered by active members.

Table 6 presents the historical changes in the first two funding measures over the past 17 years. Table 7 shows the funding progress achieved in measure 3 indicated above. Finally, Table 8 indicates the historical change in funding measure 4.

## III. FINANCIAL EXPERIENCE

As of September 30, 2004, the market value of the total assets of the System amounted to over $\$ 9.46$ billion. Of this total, $\$ 33.9$ million was reserved for health benefits, leaving $\$ 9.43$ billion in pension assets. Table 9 shows the distribution of assets by type of investment as of the current and preceding valuation dates. Table 10 shows the historical growth in market value of the System's assets.

During 1998, the Department of Management and Budget approved the use of market value of assets as of September 30, 1997 for actuarial valuation purposes. For investment gains or losses that occur after that date, a 5-year smoothing technique is being used. This is the same procedure as was in effect prior to September 30, 1997, and is described below.

The actuarial value of assets is determined on the basis of a valuation method that assumes the fund earns the expected rate of return of $8.0 \%$, and includes an adjustment to reflect market value. This procedure is applied as follows:
(i) Preliminary value is determined by taking the sum of actuarial value at the beginning of the year and the excess of income over expenses during the year, assuming that the fund earns the assumed rate of $8 \%$ during the year.
(ii) This value is written-up or written-down by taking $20 \%$ of each year's difference between actual and expected return for the next five years. Actual return for the year includes net interest, dividends, and asset appreciation or depreciation.

For the September 30, 2004 valuation, the actuarial value of assets is $\$ 10.15$ billion for pension benefits, which is $\$ 721$ million (i.e., $7.65 \%$ ) more than the market value of $\$ 9.43$ billion. Table 11 presents the determination of the actuarial value of assets for the current and prior four years.

Table 9

## IV. MEMBERSHIP CHARACTERISTICS

A total of 87,765 active, inactive vested, and retired members of the Michigan State Employees' Retirement System are included in this 2004 actuarial valuation.

Computer tapes containing membership data as of September 30, 2004 were provided to us by the Office of Retirement Services. For purposes of the actuarial valuation, we prepared various tabulations of the membership data recorded on the computer tapes. Summaries of these tabulations are presented in this section and in the tables which follow.

## Active Employees

The 34,749 active employees covered by the System as of September 30, 2004 had a total reported payroll of approximately $\$ 1.89$ billion (up $1.6 \%$ from $\$ 1.86$ billion last year) and an average annual salary of $\$ 54,373$. Between the 2003 and 2004 actuarial valuations, the number of active members decreased by 1,787 or $4.89 \%$. Average age, average service and average salary each changed, as shown below:

|  | September 30 |  |  |  |
| :--- | ---: | ---: | ---: | ---: |
| Number of Active Members | $\mathbf{2 0 0 4}$ | $\mathbf{2 0 0 3}$ |  |  |
| Number of Corrections Officers |  | 34,749 | 36,536 |  |
| Number of Conservation Officers | 9,955 | 10,590 |  |  |
| Average Age | 144 | 155 |  |  |
| Average Service | 48.4 | 47.7 |  |  |
| Reported Payroll | $\$ 1,889,410,368$ | $\$ 1,859,555,375$ |  |  |
| Average Annual Pay | $\$$ | 54,373 | $\$$ | 50,897 |
| Payroll for Corrections Officers | $\$ 549,727,654$ | $\$$ | $535,989,177$ |  |
| Average Annual Pay for Corrections Officers | $\$$ | 55,221 | $\$$ | 50,613 |
| Payroll for Conservation Officers | $\$$ | $10,569,246$ | $\$$ | $10,519,385$ |
| Average Annual Pay for Conservation Officers | $\$$ | 73,398 | $\$$ | 67,867 |

Table 12 shows the average age, average years of service, and average salary of active employees as of September 30, 2004. Table 13 shows the distribution of employees as of September 30, 2004 by annual salary.

## Inactive Members

The 2004 actuarial valuation also takes account of the actuarial liabilities for 7,397 reported vested members, as compared to 7,528 in the 2003 valuation.

## Pensioners and Beneficiaries

As of September 30, 2004, the System was paying retirement benefits to a total of 45,619 retirants and beneficiaries. During fiscal 2004, the total number of benefit recipients increased by 128 as shown below:

## September 30,

|  | $\underline{\mathbf{2 0 0 4}}$ | $\underline{\mathbf{2 0 0 3}}$ |
| :--- | ---: | ---: |
| Retirement Annuities | $\mathbf{3 6 , 2 0 7}$ | 36,324 |
| Survivor Annuities* | 5,869 | 5,691 |
| Disability Annuities | $\underline{3,543}$ | $\underline{3,476}$ |
| Total benefit recipients | $\mathbf{4 5 , 6 1 9}$ | 45,491 |
| * Includes survivors of disability retirants. |  |  |

Table 15 shows a distribution of the 45,619 System retirees as of September 30, 2004, by age, type and amount of benefit. Table 16 shows a similar distribution, by type of benefit and monthly amount categories. The average annual benefit for all retirees was $\$ 15,982$ as of September 30, 2004, after adjustment for optional benefit forms. During fiscal 2004, the average annual benefit for all System retirees increased from $\$ 15,577$ to $\$ 15,982$, or by 2.6\%.

Table 17 shows the number and annual allowances as of September 30, 2004 for each specific type of pension in force. Table 18 presents a historical development of the growth in number and amount of pensioners in force, as well as the present value of pensioner liabilities, since the 1945 valuation. Finally, Table 19 shows a reconciliation of data from the 2003 to the 2004 valuation.

## V. ACTUARIAL ASSUMPTIONS AND FUNDING METHOD

## Actuarial Assumptions

To calculate System contribution requirements, assumptions are made about all of the future events that could affect the amount and timing of benefits to be paid and the assets to be accumulated. The assumptions include several economic and demographic predictions such as:
o An assumed rate of investment return which is used to discount liabilities and project what plan assets will earn.
o A mortality table projecting the number of employees who will die before retirement and the duration of benefit payments after retirement.
o Assumed retirement rates projecting when employees will retire and commence receiving retirement benefits.
o Withdrawal and disability rates to estimate the number of employees who will leave the work force before retirement.
o Assumed rates of salary increases to project employees’ compensation in future years.

Based on an actuarial experience investigation covering the period from September 30, 1997 through September 30, 2002, several changes in actuarial assumptions were adopted for use beginning with the 2004 valuation. The actuarial assumptions used in connection with this 2004 actuarial valuation of the System are summarized in the following paragraphs.

## Investment Yield

Funding the System on an actuarial reserve basis involves the accumulation of substantial reserves to pay benefits in the future. These reserves are invested and the net rate of investment earnings is a major factor in determining the contributions required to support the ultimate cost of benefits.

The net rate of investment yield is comprised of imputed income at the valuation interest rate, plus a write-up (down). This write-up (down) reflects $20 \%$ of the actual investment return (including interest, dividends, and asset appreciation or depreciation, less administrative expenses) in excess of (less than) this assumption, over each year during the current year and the subsequent four-year period.

For the 2004 actuarial valuation of the System, the long-term net investment yield rate is assumed to be $8.0 \%$. This is the same assumption as used in 2003.

The schedule below shows the approximate net investment yield rate on average total assets at actuarial value for each of the past 17 fiscal years (determined as (i) investment income net of expenses, divided by (ii) the average actuarial value of assets during the year):

| Fiscal Year <br> Ended September 30 | Net investment <br> yield rate |
| :---: | :---: |
| 2004 | $2.70 \%$ |
| 2003 | 3.72 |
| 2002 | 3.00 |
| 2001 | 6.49 |
| 2000 | 10.77 |
|  |  |
| 1999 | 9.60 |
| 1998 | 7.95 |
| $1997^{*}$ | 13.59 |
| 1996 | 10.82 |
| 1995 | 10.84 |
|  |  |
| 1994 | 8.72 |
| 1993 | 11.47 |
| 1992 | 5.36 |
| 1991 | 7.00 |
| 1990 | 6.13 |
| 1989 | 9.96 |
| 1988 | 6.94 |

* Note that the above yield for 1997 excludes the additional write up due to the resetting of actuarial value to market value as of September 30, 1997. If included, the net investment yield rate for fiscal 1997 would be $19.84 \%$ higher, or 33.43\%.

## Salary Increases

Because System benefits are based on a member's final average compensation, it is necessary to make an assumption with respect to the salary progression of employees in the future. The salary increase assumption used in this 2004 actuarial valuation projects annual salary increases of $3.5 \%$ representing inflation (reduced from $4.0 \%$ used in 2003), plus a percentage based on an age-related scale to reflect merit, longevity and promotional salary increases (also revised for 2004).

The salary increase assumption projects the following salary increases for selected ages:

| Age | Assumed Percentage <br> Increase in Salary |
| :---: | :---: |
| 20 | $14.37 \%$ |
| 25 | 10.74 |
| 30 | 6.61 |
| 35 | 4.95 |
| 40 | 4.43 |
| 45 | 4.12 |
| 50 | 3.91 |
| 55 | 3.91 |
| 60 | 3.50 |
| 65 | 3.50 |

## Withdrawal Rates

The withdrawal rates used in an actuarial valuation project the percentage of employees at each age who are assumed to terminate employment before qualifying for retirement benefits. The withdrawal rates do not apply to members eligible to retire, and do not include separation on account of death or disability.

The assumed rates of withdrawal applied in the current valuation have been revised for the 2004 valuation and are as follows:

| Sample <br> Ages | Years of <br> Service | Percent Separating <br> Within Next Year |
| :---: | :---: | :---: |
| All | 0 | $12.00 \%$ |
|  | 1 | 8.50 |
|  | 2 | 6.50 |
|  | 3 | 5.00 |
|  | 4 | 4.00 |
| 20 | 5 \& over | 4.00 |
| 25 |  | 3.50 |
| 30 |  | 3.00 |
| 35 |  | 2.50 |
| 40 |  | 2.25 |
| 45 |  | 2.00 |
| 50 |  | 1.75 |
| 55 |  | 1.75 |
| 60 |  | 1.75 |

## Disability Rates

The assumed rates of disablement (also revised for the 2004 valuation) are shown below at various ages:

Percent Becoming Disabled Within Next Year

| Sample <br> Ages | Non-Duty <br> Disabilities | Duty <br> Disabilities |
| :---: | :---: | :---: |
| 25 | $0.03 \%$ | $0.05 \%$ |
| 30 | 0.05 | 0.05 |
| 35 | 0.10 | 0.05 |
| 40 | 0.20 | 0.05 |
| 45 | 0.34 | 0.05 |
| 50 | 0.47 | 0.05 |
| 55 | 0.62 | 0.05 |
| 60 | 0.82 | 0.05 |
| 65 | 1.16 | 0.05 |

The mortality table used for disabled lives is a table based primarily on 1992-97 Michigan experience (in effect since 1998).

## Retirement Age

A schedule of retirement rates is used to measure the probability of eligible members retiring during the next year. The following retirement rates apply to members eligible for normal retirement (i.e., with an unreduced benefit):

## Percent Retiring Each Year

| Retirement Age | Conservation Officers | Corrections Officers | Others |
| :---: | :---: | :---: | :---: |
| 45 | 16\% | -\% | - \% |
| 46 | 16 | - | - |
| 47 | 16 | - | - |
| 48 | 16 | - | - |
| 49 | 16 | - | - |
| 50 | 16 | - | - |
| 51 | 16 | 25 | - |
| 52 | 16 | 18 | - |
| 53 | 16 | 12 | - |
| 54 | 16 | 15 | - |
| 55 | 16 | 15 | 18 |
| 56 | 16 | 25 | 15 |
| 57 | 15 | 12 | 12 |
| 58 | 15 | 12 | 12 |
| 59 | 15 | 12 | 12 |
| 60 | 18 | 18 | 16 |
| 61 | 15 | 15 | 14 |
| 62 | 30 | 30 | 25 |
| 63 | 22 | 22 | 20 |
| 64 | 22 | 22 | 20 |
| 65 | 35 | 35 | 35 |
| 66 | 25 | 25 | 25 |
| 67 | 25 | 25 | 25 |
| 68 | 25 | 25 | 25 |
| 69 | 25 | 25 | 25 |
| 70 | 50 | 50 | 50 |
| 71 | 60 | 60 | 60 |
| 72 | 70 | 70 | 70 |
| 73 | 80 | 80 | 80 |
| 74 | 90 | 90 | 90 |
| 75 | 100 | 100 | 100 |
| ERS |  |  | EG |

For Conservation Officers, $50 \%$ are assumed to retire in the first year of eligibility for unreduced benefits (i.e., at 25 years of service) instead of the age based assumption.

A Conservation Officer is eligible for retirement after 25 years of service regardless of age, or after attaining age 60 with 10 or more years of service.

A Corrections Officer is eligible for retirement after attaining age 51 with 25 or more years of covered service, or after attaining age 56 with 10 or more years of covered service.

Other members are eligible for full retirement after attaining age 55 with 30 or more years of service, or after attaining age 60 with 10 or more years of service.

For members eligible for early retirement (i.e., age 55 with 15 years of service), but not yet eligible for an unreduced retirement benefit, the following rates apply:

The current retirement age assumption was revised for the 2004 valuation.

## Mortality

In estimating the amount of the reserves required at the time of retirement to pay an employee's benefit for the remainder of his or her lifetime, it is necessary to make an assumption with respect to expected mortality after retirement. In addition, the same assumption is used to measure the probability of members dying before retirement.

The mortality table used to project the mortality experience of System members is the 1994 Group Annuity Mortality Table, set forward one year for both men and women (first used in the 1998 valuation).

The life expectancies projected by the assumed mortality table for male and female System retirees are shown below for selected ages, along with the present value of $\$ 1$ payable monthly for life (at an $8 \%$ interest rate):

|  | Expected Years <br> of Life Remaining |  | Present Value of <br> Men Monthly for Life |  |
| :---: | :---: | :---: | :---: | :---: |
| Age | 29.81 | $\underline{\text { Women }}$ | Men | $\underline{\text { Women }}$ |
| 50 | 25.31 | 33.98 | $\$ 133.78$ | $\$ 139.77$ |
| 55 | 21.04 | 29.28 | 125.93 | 133.49 |
| 60 | 17.14 | 24.74 | 116.20 | 125.33 |
| 65 | 13.67 | 20.50 | 104.97 | 115.57 |
| 70 | 10.57 | 16.58 | 92.65 | 104.12 |
| 75 | 7.93 | 12.94 | 79.03 | 90.41 |
| 80 |  | 9.76 | 64.93 | 75.42 |

## Funding Method

Funding the System on an actuarial reserve basis seeks to achieve the following major objectives:
o Level required contribution rates as a percentage of payroll;
o Finance benefits earned by present employees on a current basis;
o Accumulate assets to enhance members' benefit security;
o Produce investment earnings on accumulated assets to help meet future benefit costs;
o Make it possible to estimate the long-term actuarial cost of proposed amendments to System provisions; and
o Assist in maintaining the System's long-term financial viability.
The basic funding objective is a level pattern of cost as a percentage of salary throughout an employee's working lifetime. The funding method used in this actuarial valuation - the entry age normal cost method - is intended to meet this objective and result in a relatively level long-term contribution requirement as a percentage of salary.

Under the entry age normal cost method, the total actuarially-determined contribution requirement is the sum of the normal cost and the payment required to amortize the unfunded accrued liability over the adopted amortization period of 40 years from October 1, 1996 (32 years remaining as of the valuation date).

## Normal Cost

In general terms, the normal cost is the cost of benefit rights accruing on the basis of current service. Technically, the normal cost rate is the level percentage-of-salary contribution required each year, with respect to each employee, to accumulate over his or her projected working lifetime the reserves needed to meet the cost of earned benefits. The normal cost represents the ultimate cost of the System if the unfunded liability is paid up and the actual experience of the System conforms to the assumptions.

Normal cost contributions for death and disability benefits were determined using a one-year term cost method. This method produces contributions sufficient to fund the value of (i) disability benefits and (ii) survivor benefits because of a member's death while employed, likely to be incurred during the year (net of the member's accrued age and service benefits).

## Actuarial Accrued Liabilities

The total actuarial present value of future benefits is computed as the current discounted value of all benefits expected to be paid in the future to all active, retired and inactive vested members. Subtracting the present value of future normal costs results in the actuarial accrued liability.

The total actuarial accrued liability essentially represents the amount that would have been accumulated as of September 30, 2004 if contributions sufficient to meet the normal costs of the System had been made each year in the past, and if the actual experience of the System had never deviated from the assumptions. If assets equalled the total accrued liability, there would be no unfunded liability and future contribution requirements would consist solely of the calculated normal cost rates.

## Amortization of Unfunded Actuarial Accrued Liabilities

Unfunded (overfunded) actuarial accrued liabilities are amortized by level percent of payroll contributions over a 40-year period from October 1, 1996 (32 years remaining from October 1, 2004). Active member payroll is not assumed to increase for the purpose of determining the level percent contributions.

## VI. SUMMARY OF SYSTEM PROVISIONS

Our actuarial valuation of the System as of September 30, 2004 is based on the present provisions of the State Employees’ Retirement Act, which are summarized in this section.

Regular Retirement (no reduction factor for age):
Eligibility - Age 55 with 30 years service; or age 60 with 10 or more years service. Corrections Officers may retire at age 51 with 25 or more years service; or age 56 with 10 or more years service. Conservation Officers may retire after 25 years of service regardless of age.

Final Average Compensation - Regular retirement benefit is based on final average compensation (FAC), which is usually the average of highest 3 consecutive years (2 years for Conservation Officers).

Annual Amount - Total service times $1.5 \%$ of FAC. For members with 20 or more years of service, a $\$ 3,000$ minimum annual benefit is payable. Corrections Officers receive an additional temporary supplement to age 62 equal to the product of supplemental service times $0.5 \%$ of FAC. Conservation Officers retiring after 25 years receive a benefit equal to $60 \%$ of FAC.

Early Retirement (age reduction factor used):
Eligibility - Age 55 with 15 or more years service.
Annual Amount - Computed as regular retirement benefit but reduced by $1 / 2 \%$ for each month under age 60.

Deferred Retirement (vested benefit):
Eligibility - 10 years of service (5 years for unclassified persons in the executive or legislative branch). Benefit commences at age 60.

Annual Amount - Computed as regular retirement benefit based on service and FAC at termination.

## Duty Disability Retirement:

Eligibility - No age or service requirement.
Annual Amount - Disability after age 60: Computed as regular retirement benefit with minimum benefit based on 10 years service. Disability prior to age 60: To age 60 , benefit is $2 / 3$ of FAC but limited to $\$ 6,000$ per year. Additional limitation such that benefit plus workers' compensation does not exceed final compensation. After age 60, benefit is recomputed as a regular retirement benefit with service granted for period in receipt of disability benefit before age 60 (benefit not reduced after age 60).

## Non-Duty Disability Retirement:

Eligibility - 10 years of service.
Annual Amount - Computed as regular retirement benefit based on service and FAC at time of disability. Minimum annual benefit is $\$ 600$.

## Duty Death Before Retirement:

Eligibility: No age or service requirement. Also applies to duty disability retirant who dies within 3 years of disability and before age 60.

Annual Amount - Accumulated employee contributions are refunded. Surviving spouse receives annual benefit of $1 / 3$ of final compensation until death. Unmarried children under age 18 each receive an equal share of $1 / 4$ of final compensation (if no spouse each child receives $1 / 4$, to a maximum of $1 / 2$ for all children). If no spouse or eligible children, each dependent parent receives $1 / 6$ of final compensation. Total benefits payable are limited to $\$ 2,400$ per year. Additional limitation such that benefits plus workers' compensation does not exceed final compensation.

## Non-Duty Death Before Retirement:

Eligibility - 10 years of service. In the case of a deceased vested former member, the survivor benefit commences when the deceased former member would have attained age 60.

Annual Amount - Computed as regular retirement benefit but reduced in accordance with a $100 \%$ joint and survivor election.

Post-Retirement Cost-of-Living Adjustments: One-time upward adjustments have been made in 1972, 1974, 1976, 1977 and 1987. Beginning in 1983 some benefit recipients share in a distribution of a portion of investment income earned in excess of $8 \%$ annually (supplemental payment). Beginning in 1988 all benefit recipients are eligible for automatic 3\% annual (non-compounded) benefit increases, with a maximum $\$ 300$ annual increase. Eligibility for the above benefits:

Retired before October 1, 1987 - greater of supplemental payment or the combination of the 1987 one-time adjustment and the automatic increases.

Retired on or after October 1, 1987 - automatic increases only.

Post-Retirement Health Insurance Coverage: Persons in receipt of retirement allowances (including members who did not retire directly from the System, but come from a vested deferred status), and their dependents, are eligible for $95 \%$ State-paid health insurance coverage and $90 \%$ State-paid dental and vision insurance.

Member Contributions: None

## Defined Contribution Legislation (Public Act 487 of 1996):

New employees hired on or after March 31, 1997 become participants in Tier 2 (i.e., a defined contribution plan) rather than Tier 1 (i.e., the above described defined benefit plan).

Active members on March 30, 1997 were able to irrevocably elect to terminate membership in Tier 1 and become participants in Tier 2. Elections had to be in writing and submitted between January 2, 1998 and April 30, 1998. Such members became Tier 2 participants on June 1, 1998, and were to have the actuarial present value of their Tier 1 accrued benefit transferred into Tier 2 by November 30, 1998.

## 2002 Early Out Window

Members retiring between April 1, 2002 and November 1, 2002 whose combined age and service equals 80 points, or who are age 60 or older with 10 or more years of service are eligible to receive a benefit equal to $1.75 \%$ of final average compensation multiplied by years of credited service. Members who had previously transferred to the Defined Contribution plan, are eligible to receive a benefit equal to $0.25 \%$ of final average compensation multiplied by years of credited service.

## VII. ACCOUNTING INFORMATION

The Governmental Accounting Standards Board (GASB) has changed the way governmental entities account for their pension plans. The new standards, GASB Statements Nos. 25 and 27, replace the prior reporting requirements under GASB Statement No. 5.

## GASB Statement No. 25

For plan years commencing after June 15, 1996, the plan is subject to the disclosure requirements of Statement No. 25 of the Governmental Accounting Standards Board (GASB).

Statement No. 25 establishes financial reporting standards for defined benefit pension plans as they relate to the Plan's financial accounting. As used in Statement No. 25, pension benefits include retirement income as well as other types of postemployment benefits (disability, death benefits, life insurance) but exclude postemployment healthcare.

Statement No. 25 for defined benefit plans requires two plan financial statements on an accrual basis (statement of plan net assets and a statement of changes in plan net assets). The statement now requires the fair value of assets for those financial statements where previously cost or amortized cost could be used.

Statement No. 25 also requires notes to the Financial Statements including plan description, classes of employees covered, brief description of benefit provisions and a summary of significant accounting policies (including funding policy).

Also required (after the notes) is supplementary information ("Required Supplementary Information") including a schedule of funding progress and a schedule of employer contributions. The actuarial information to be shown must be determined under certain parameters. These parameters are the same as those required under GASB Statement No. 27, and are summarized below:

Actuarial Valuations: Must occur at least every two years and the results must be applied within 12 months (24 months for biennial valuations) for plans and 24 months for employers.

Actuarial Assumptions: Best estimate of individual assumptions and consistency of all assumptions. Investment return assumption (discount rate) based on estimated long-term investment yield for plan.

Actuarial Cost Method: Entry age, frozen entry age, attained age, frozen attained age, aggregate or projected unit credit are acceptable.

Actuarial Value of Assets: Market-related.
Annual Required Contributions of Employers: Must include normal (current service) cost and amortization of the plan's total unfunded actuarial liability (UAL).

Amortization Period: Periods of up to 40 years will be acceptable for the first 10 years after the effective date of Statement No. 25. After that, periods cannot exceed 30 years. Significant decreases in UAL caused by changing actuarial methods must be amortized over at least 10 years.

Amortization Method: Level dollar or level percentage of projected payroll, open or closed basis.

It is important to note that GASB Statement No. 25 eliminates the need to report actuarial accrued liabilities on a standardized basis (i.e., pension benefit obligation) and instead substitutes all actuarially determined information based on the plan's funding method (e.g., Entry Age Normal Actuarial Cost for the Michigan State Employees’ Retirement System).

Paragraph 39 states that the required "Schedules of Funding Progress" and "Employer Contributions" should include information for the current year and as many of the prior years as information, according to the parameters, is available.

The "Schedule of Funding Progress" is presented in Table 6, which appears in Section II.

The "Schedule of Employer Contributions" is presented in Table 4, which also appears in Section II. Each applicable computed contribution (or the annual required contribution) is based on the actuarial valuation for that year. Actual contributions shown are based on data provided by the System

Additional "Required Supplementary Information" is shown in Table 20.

## GASB Statement No. 27

GASB Statement No. 27 establishes the standards of accounting and financial reporting for pension expenditures/expense and related pension liabilities, pension assets, note disclosures and required supplementary information in the financial reports of governmental employers. (The financial reporting for the pension trust funds is covered by GASB Statement No. 25 as described above.)

GASB Statement No. 27 does not mandate or require the employer to fund (contribute) any specific amount. Rather it determines the standards (parameters) to be used for the purpose of expensing the cost of pension benefits on the employer's financial statements. To the extent that an employer wants to fund (contribute) the same amount that it expenses, the amount contributed must be determined under certain parameters. When the funding methods and assumptions meet the parameters, the same methods and assumptions are used for both funding and expensing (accounting). If they do not, the employer/entity must choose between making two calculations at each actuarial valuation - one for funding and one for accounting - or modifying the funding approach to meet the parameters. Using different methods for accounting and funding may result in increasing employer liabilities (Net Pension Obligation).

Statement No. 27 uses some new terms, including:

Net Pension Obligation (NPO) - Represents the employer's transition obligation/asset for past underfunding/overfunding of contribution amounts compared to those actuarially determined. After the effective date of Statement No. 27, it will include the cumulative difference between annual pension cost (ARC) and the employer's contributions.

In determining the NPO at transition, paragraph 30 of GASB 27 refers to the "employer's required contributions in accordance with the plan's actuarially determined funding requirements. . ." We have determined the "required contribution" for prior years based on the actuarial valuation results for such applicable year. The determination of the NPO as of September 30, 2004 is shown in Table 21. The table shows that, as of September 30, 2004, the employer has a net pension obligation of $\$ 266,147,645$.

Actuarial Required Contribution (ARC) - Represents the contribution amount that can also be used for purposes of reporting annual pension expense/accounting. If an employer has an NPO, an adjustment to the ARC is needed to be used for expense/accounting purpose. In determining the ARC amount, certain actuarial parameters must be met. The parameters are the same as those for GASB 25.

The actuarial assumptions and methods currently employed for purposes of actuarially determining the System's annual contribution are, in our opinion, within the required GASB parameters.

We have determined the Actuarial Required Contribution (ARC) and Pension Cost (after adjustment to the ARC as a result of the NPO) for the fiscal year ending September 30, 2005 in Table 22.

Table 20

## Actuarial Required Contribution and Pension Cost

For Fiscal Year Ending September 30, 2005

- GASB Statement No. 27

| 1. | Net Pension Obligation (asset) <br> as of September 30, 2004 | $\$ 266,147,645$ |
| :--- | :--- | :--- |
| 2. | Actuarial Required Contribution (ARC) <br> for fiscal year ending September 30, 2005 | $308,208,544$ |
| 3. | Interest on NPO: 8.00\% x item 1 |  |
| 4. | Adjustment to ARC due to NPO: <br> $0.0841496 \times$ item 1 | $21,291,812$ |
| 5. | Pension Cost (GASB Statement No. 27) for fiscal <br> year ending September 30, 2005 (2 + 3-4) | $22,396,218$ |

Note: Pension Cost is the expense to be reported on the employer's financial statement for the fiscal year.

## APPENDIX

## ACTUARIAL VALUATION STATEMENT

## MICHIGAN STATE EMPLOYEES RETIREMENT SYSTEM <br> Actuarial Valuation Statement

This is to certify that we have prepared an actuarial valuation of the Michigan State Employees’ Retirement System (the "System") as of September 30, 2004.

Actuarial calculations were made with respect to a total of 87,765 System members: 34,749 active employees, 7,397 inactive members with vested rights to a deferred pension; and 45,619 retirees and surviving beneficiaries.

The actuarial cost factors for pension benefits for System members are as follows:

| 1. Actuarial accrued liability - total | \$ 12,003,994,703 |
| :---: | :---: |
| Active employees - total | 4,089,382,593 |
| Active employees - regular benefits.............3,859,766,327 |  |
| Additional for employees with |  |
| Corrections Officer service ........................ 216,952,807 |  |
| Additional for employees with |  |
| Conservation Officer service ........................ 12,663,459 |  |
| Inactive members | 411,220,643 |
| Retirees and surviving beneficiaries | 7,503,391,467 |
| 2. Assets at actuarial value ( $\$ 9,428,463,524$ at market value). | 10,149,275,470 |
| 3. Future reconciliation contributions | -0- |
| 4. Unfunded (overfunded) actuarial accrued liability $=(1)-(2)-(3)$ | 1,854,719,234 |
| 5. Payment required to amortize unfunded actuarial accrued liability over 32 years as a level percent of payroll . 08414958 x (4) $\qquad$ | 156,073,852 |
| 6. Normal Cost - total | 152,134,692 |
| Regular benefits .......................................... 144,891,781 |  |
| Additional for members with |  |
| Corrections Officer service ............................. 6,805,367 |  |
| Additional for members with |  |
| Conservation Officer service ............................. 437,545 |  |
| 7. Total payroll (greater of rate and prior year earnings) | 1,889,410,368 |
| 8. Normal cost as percentage of payroll |  |
| a) Total | 8.05\% |
| b) Employee portion | -0- |
| c) Employer portion | 8.05\% |
| 9. Payment required to amortize unfunded actuarial accrued liability as a percentage of payroll $\qquad$ | 8.26\% |
| 10. Total employer cost $=(5)+(6)$ | 308,208,544 |
| 11. Employer cost as percentage of payroll = (10)/(7) ................ | 16.31\% |

## MICHIGAN STATE EMPLOYEES RETIREMENT SYSTEM

Actuarial Valuation - 2 -

The key actuarial assumptions used in the September 30, 2004 actuarial valuation are summarized below:

## Interest Rate:

8.0\%

Salary Scale:
Inflation component is $3.5 \%$; the merit component varies from $10.5 \%$ per annum at age 20 to $0.1 \%$ per annum at age 59 and $0.0 \%$ at ages 60 and later.

## Retirement Ages

In accordance with a table of rates, at each age from 55 to 75 (except 45 to 75 for Conservation Officers and 51 to 75 for Corrections Officers).

For Conservation Officers, $50 \%$ are assumed to retire in the first year of eligibility for unreduced benefits (i.e., at 25 years of service) instead of the age based assumption.

Termination Rates Before Retirement:

| Sample <br> Ages | Years of <br> Service | Percent Separating <br> Within Next Year |
| :---: | :---: | :---: |
| All | 0 | $12.00 \%$ |
|  | 1 | 8.50 |
|  | 2 | 6.50 |
|  | 3 | 5.00 |
|  | 4 | 4.00 |
| 20 | $5 \&$ over | 4.00 |
| 25 |  | 3.50 |
| 30 |  | 3.00 |
| 35 |  | 2.50 |
| 40 |  | 2.25 |
|  |  | 2.00 |
| 45 |  | 1.75 |
| 50 |  | 1.75 |
| 55 |  | 1.75 |

## MICHIGAN STATE EMPLOYEES RETIREMENT SYSTEM

Actuarial Valuation - 3 -

## Mortality Rates:

In accordance with the 1994 Group Annuity Mortality Table (set forward one year for men and one year for women).

The actuarial calculations were performed by qualified actuaries in accordance with accepted actuarial procedures, and were based on the actuarial assumptions adopted by the Retirement Board and the Department of Management and Budget upon the recommendation of the actuary.

[^4]
[^0]:    1 Revised actuarial assumptions. ${ }^{2}$ Benefit changes. ${ }^{3}$ Revised asset valuation method.
    4 Excludes health and dental/vision benefits beginning in 1996 (prior years included dental/vision). ${ }^{5}$ Revised actuarial assumptions and revised asset valuation method.

[^1]:    @ Revised actuarial assumptions
    \# Benefits amended + Revised asset valuation method $\quad * *$ Percent funded on a total valuation asset and total actuarial accrued liability basis.

[^2]:    ${ }^{1}$ Data reporting correction. ${ }^{2}$ Estimated.

[^3]:    * Allowances may not add due to rounding.
