Re: Michigan State Employees' Retirement System - Actuarial Valuation as of September 30, 2018

Dear Board Members:

The results of the September 30, 2018 actuarial valuation of the Michigan State Employees' Retirement System (SERS) pension benefits are presented in this report. The purpose of the valuation was to measure the System's funding progress and to determine the employer contribution for the 2020-2021 fiscal year and to provide actuarial information for the System's financial report. The report should not be relied upon for any other purpose. This report may be provided to parties other than the Office of Retirement Services (ORS) only in its entirety and only with the permission of the Office of Retirement Services. GRS is not responsible for unauthorized use of this report.

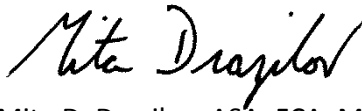

The valuation was based upon information, furnished by the Office of Retirement Services, concerning Retirement System benefits, financial transactions, and active members, terminated members, retirees and beneficiaries. Data was checked for internal and year-to-year consistency, but was not audited by us. As a result, we are unable to assume responsibility for the accuracy or completeness of the data provided. Year 2005 and prior years' valuation results back to 1993 were not prepared by GRS and are presented for comparison with the current year's results.

The valuation summarized in this report involves actuarial calculations that require making assumptions about future events. We believe that the assumptions and methods used in this report are reasonable and appropriate. However, other assumptions and methods could also be reasonable and could result in materially different results. Some of the numbers in this report are rounded. The use of the rounded numbers for plan liabilities should not imply a lack of precision. In addition, because it is not possible or practical to consider every possible contingency, we may use summary information, estimates or simplifications or calculations to facilitate the modeling of future events. We may also exclude factors or data that we deem to be immaterial.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of this assignment, we did not perform an analysis of the potential range of future measurements. This valuation was based on the assumption that the plan sponsor will continue to be able to make any contributions necessary to fund the plan in the future. A determination of the plan sponsor's ability to make the necessary contributions in the future is beyond the scope of our expertise and was not performed by us.

To the best of our knowledge, this report is accurate and fairly presents the actuarial position of the Retirement System. The valuation was conducted in accordance with standards of practice prescribed by the Actuarial Standards Board and in compliance with the applicable State statutes. Mita D. Drazilov and Louise M. Gates are independent of the plan sponsor and are Members of the American Academy of Actuaries (MAAA) who meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. It is our opinion that the actuarial assumptions used for the valuation produce results which are reasonable.

Sincerely,

Mita D. Drazilov, ASA, FCA, MAAA

Louise M. Gates, ASA, FCA, MAAA

Executive Summary/Board Summary

1. Required Employer Contributions to Support Retirement Benefits

The computed employer contribution for fiscal year 2021 is shown below. Computed contributions are displayed as annual dollar amounts. The Retirement System is closed to new members and as a result, contributions expressed as percentages of active member payroll are not useful. We understand that the current policy is to contribute on the basis of the dollar amount shown below plus any reconciliation payments established by subsection 38(5) of the SERS statute.

| |
|------------------------|
| Contribution \$ |
| \$665,141,237 |

2. Contribution Comparison

The chart below compares the results of this valuation of the Retirement System with the results of the prior year's valuation.

| Valuation Date | 9/30/2017 | 9/30/2018 |
|-----------------------|------------------|------------------|
| Contribution \$ | \$600,597,510 | \$665,141,237 |

3. Dedicated Gains Policy

In 2017, the Board adopted a Dedicated Gains Policy. The purpose of the Policy is to reduce the investment return assumption for actuarial valuation purposes if the fiscal year's net market value rate of return exceeds a certain amount. The immediate recognition of the market value return is expected to offset the increase in the computed employer contribution from where it otherwise would have been.

For SERS, the following is applicable:

- For normal cost purposes, the amount of excess investment return is sufficient to cover the increase in the employer normal cost for the first year only.
- The actuarial assumptions used in the Dedicated Gains Policy analysis were the same as those adopted by the Board in connection with the 2012-2017 experience studies (unless otherwise noted).

For the September 30, 2018 valuation, the investment return assumption was reduced from 7.00% to 6.70% as a result of the Policy. Please see page C-3 for additional detail.

Executive Summary/Board Summary

4. Reasons for Change

There are three general reasons why contributions change from one valuation to the next. The first is a change in the benefits or eligibility conditions of the plan. The second is a change in the valuation assumptions used to predict future occurrences and valuation methods. The third is the difference during the year between the plan's actual experience and what the assumptions predicted.

No benefit changes were reported to the actuary for the year ended September 30, 2018. Assumption and method changes are reflected in this valuation of the System. These changes were made based on the results of the recently completed 5-year Experience Study (2012-2017). These changes are identified in Section E of this report.

Additionally, in accordance with the Dedicated Gains policy, the investment return assumption was lowered from 7.00% to 6.70%. This resulted in an increase in computed liabilities and employer contribution requirements. Finally, System experience for the year was overall favorable and is described in more detail in Section B of this report.

SECTION A

INTRODUCTION

Contribution Requirements

Development of Employer Contributions for the Indicated Valuation Date

| Contributions for | September 30 | |
|---|-----------------------|-----------------------|
| | 2017 | 2018 |
| (1) Fiscal Year Ending September 30, | 2020 | 2021 |
| (2) Total Normal Cost of Benefits (as a % of member pay) | 9.39% | 9.29% |
| (3) Member Contribution % | <u>4.00%</u> | <u>4.00%</u> |
| (4) Employer Normal Cost % = (2) - (3) | 5.39% | 5.29% |
| (5) Projected Tier 1 Active Member Payroll for Applicable Fiscal Year | \$ 642,890,906 | \$ 549,109,948 |
| (6) Employer Normal Cost \$ = (4) x (5) | 34,651,820 | 29,047,916 |
| a. Tier 2 Employer Normal Cost \$ | 10,925,523 | 8,556,213 |
| b. Administrative Expenses | 0 | 6,500,000 |
| c. Total Employer Normal Cost \$ = (6) + (6a) + (6b) | \$ 45,577,343 | \$ 44,104,129 |
| (7) Total Accrued Liability | 17,880,548,907 | 18,995,243,989 |
| (8) Funding Value of Assets | 11,883,784,188 | 12,494,360,972 |
| (9) Unfunded Actuarial Accrued Liabilities (UAAL) = (7) - (8) | \$ 5,996,764,719 | \$ 6,500,883,017 |
| a. Present Value of Future Reconciliation Payments | 31,212,180 | 21,425,910 |
| b. Net UAAL to be Amortized = (9) - (9a) | \$ 5,965,552,539 | \$ 6,479,457,107 |
| (10) Amortization Period (years) | 17 | 16 |
| (11) Amortization Factor (level dollar payments) | 10.10108279 | 9.95669759 |
| (12) Amortization Payment (Credit) | \$ 555,020,167 | \$ 621,037,108 |
| (13) Total Computed Employer Contribution = (6c) + (12) | \$ 600,597,510 | \$ 665,141,237 |

Computed Employer Contributions

Based on the assumptions outlined in report Section E, the long term employer contribution rate for Tier 1 members of the Michigan State Employees' Retirement System is expected to be 5.29% of payroll (the employer normal cost rate) until the last active member retires. However, there is also an employer normal cost contribution needed to fund the disability and death-in-service benefits for the Tier 2 member population. For the current year, a contribution is also needed to fund the unfunded actuarial accrued liability (UAAL). The sum of these contributions is the computed employer contribution.

The employer contribution determined in this valuation of the System is the computed employer contribution for the fiscal year ended September 30, 2021.

Contribution Requirements

Determining Employer Dollar Contributions

For any period of time, the percent-of-payroll contribution rate needs to be converted to dollars, then promptly contributed to the Retirement System. The employer normal cost rate (expressed as a % of active member payroll) is 5.29%. Applying the employer normal cost contribution rate of 5.29% to the projected payroll for the 2021 fiscal year produces annual employer normal cost contributions of \$29,047,916. The Tier 2 annual employer normal cost contributions are \$8,556,213. The normal cost contribution for administrative expenses is \$6,500,000. The amortization payment for funding the UAAL, \$621,037,108, when added together produces a total employer contribution of \$665,141,237. This contribution requirement is needed in addition to the reconciliation payment required by subsection 38(5) of the SERS statute.

Disability and Death-In-Service Benefits for Tier 2 Participants

Section 67a of the SERS statute provides that if a Tier 2 participant (defined contribution plan) becomes disabled or dies in employment, there may be a disability pension or survivor pension payable from the defined benefit plan. The pension amount would be based on the regular disability and death-in-service provisions of the defined benefit plan (Tier 1), but would be reduced to reflect the value of the distribution from the participant's defined contribution account. Beginning with the September 30, 2010 annual actuarial valuation, this Tier 2 benefit provision is included in the calculation of liabilities and the employer contribution requirement. In prior years, there was no advance funding for this benefit provision. When a Tier 2 participant became disabled or died in employment and a defined benefit pension was payable, an actuarial loss occurred and future employer contribution requirements were increased.

Discussion of Changes

Revisions in Benefits

There have been no material revisions in plan benefits reported to GRS in connection with this valuation of the Retirement System.

Revisions in Actuarial Assumptions or Methods

Assumption and method changes are reflected in this valuation. These changes were made based on the adoption of the findings of the recently completed 5-year Experience Study (2012-2017) which increased the computed liabilities and contribution requirements. The adoption of the Experience Study assumptions increased the actuarial accrued liability by \$632 million as of the valuation date.

Additionally, in accordance with the Dedicated Gains Policy, the investment return assumption was lowered from 7.00% to 6.70% effective with this valuation of SERS. This assumption change increased the actuarial accrued liability by \$527 million as of the valuation date.

Actuarial Experience

Actuarial experience during the year ended September 30, 2018 was overall, more favorable than anticipated by the actuarial assumptions. The net actuarial gain was approximately \$448 million. The gain was due primarily to recognized investment gains during the last plan year. Pages B-2 and B-3 describe this in detail.

Comment on the Investment Markets

Investment markets continue to be volatile. The actuarial value of assets (funding value), used to determine both the funded status and the required employer contribution, is based on a 5-year smoothed value of assets. This helps to reduce the volatility of the valuation results.

As of September 30, 2018, the actuarial value of assets was approximately 100.8% of the market value of assets. If the September 30, 2018 results were based on the market value of assets instead of the actuarial value of assets, the funded percent of the plan would be 65.3% (instead of 65.8%).

Measures of Financial Soundness

The purpose of this section of the report is to provide certain measures which indicate the financial soundness of the program. These measures relate to long term solvency and level funding.

The various percentages listed in this section as of a single valuation date are not overly significant standing alone. What is more significant is the trend of the rates over a period of years. It is also important to keep in mind that each time benefits or assumptions are revised actuarial liabilities are created or diminished. Any newly created liabilities are financed systematically over a period of future years. All actuarially computed values in this analysis are based on the actuarial assumptions utilized in the respective years' actuarial valuations.

Long Term Solvency

Over the longer term, the solvency of an ongoing plan can be measured by comparing the actuarial value of assets to an amount known as the actuarial accrued liability (AAL) under the Entry Age actuarial cost method. This item has often been called the "past service liability." The AAL may be affected immediately by any revisions in benefits or assumptions. The accumulation of assets to equal the AAL can be considered a long range funding goal. Largely because of periodic benefit increases and poor investment experience since the early 2000's very few retirement programs have attained this goal.

| Valuation Date | Actuarial Value of Assets | Actuarial Accrued Liability | % of AAL Covered by Assets |
|-----------------------|----------------------------------|------------------------------------|-----------------------------------|
| 9/30/2018 * | \$ 12,494,360,972 | \$18,995,243,989 | 65.8% |
| 9/30/2018 | 12,149,373,822 | 17,836,467,529 | 68.1 |
| 9/30/2017 * | 11,883,784,188 | 17,880,548,907 | 66.5 |
| 9/30/2017 | 11,407,392,836 | 17,107,524,207 | 66.7 |

* Revised actuarial assumptions and/or methods.

The chart above illustrates that the funded percent has decreased since the prior year. Page B-7 of this report shows the funded percent for a longer period and in greater detail. In particular, the funded percent for current benefit recipients is now 80.2% (compared to 82.5% last year).

Measures of Financial Soundness

Level Contributions

The actuarial assumptions and cost methods have been chosen with the intent of producing required employer contributions which remain fairly level. In a closed plan, the normal cost dollar amount will eventually decline as active members retire and terminate employment.

| Valuation Date | Employer Normal Cost | Amortization Payment | Total Contribution |
|-----------------------|---------------------------------|---------------------------------|-------------------------------|
| 9/30/2018 * | \$ 44,104,129 | \$621,037,108 | \$665,141,237 |
| 9/30/2018 | 42,206,490 | 541,263,648 | 583,470,138 |
| 9/30/2017 * | 45,577,343 | 555,020,167 | 600,597,510 |
| 9/30/2017 | 37,300,163 | 543,945,907 | 581,246,070 |

* Revised actuarial assumptions and/or methods.

A major factor affecting the stability of the contribution requirements shown above is how well the actual plan experience compares to the actuarial assumptions. The value of the difference between what actually occurred and what was assumed to occur is called the actuarial gain or loss. Gains tend to lower the subsequent cost of the program while losses tend to cause subsequent costs to rise.

| Year Ending | Actuarial Gain/(Loss) |
|--------------------|------------------------------|
| 9/30/2018 | \$448,265,002 |
| 9/30/2017 | 618,769,225 |

The experience gain for the year ending September 30, 2018 was 2.5% of the beginning of year actuarial accrued liability.

Analysis of all the benchmarks listed above, over a period of years, will provide an indication of whether the program is becoming financially stronger or weaker.

Other Observations

General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status

Given the plan's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the plan earning 6.70% on the actuarial value of assets), it is expected that:

- (1) employer normal cost dollar amounts will eventually decrease as active payroll declines due to the closed nature of the plan,
- (2) amortization payment dollar amounts will remain level from fiscal year 2021 through fiscal year 2036,
- (3) the unfunded actuarial accrued liability will be fully amortized by September 30, 2036, and
- (4) the funded status of the plan will increase gradually towards a 100% funded ratio.

When selecting a contribution allocation procedure, the following three items should be considered, including the balance amongst the three items:

- (1) Benefit security,
- (2) Intergenerational equity, and
- (3) Contribution stability and predictability.

Generally, given the nature of public employee retirement systems (e.g., level contribution financing objective and perceived ongoing nature of the plan or plan sponsor), intergenerational equity and contribution stability and predictability have received more consideration than benefit security when contribution allocation procedures are selected. However, given the importance of benefit security to any retirement system, we suggest that contributions to the System in excess of those presented in this report be considered.

Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regards to any funded status measurements presented in this report:

- (1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations.
- (2) The measurement is inappropriate for assessing the need for or the amount of future employer contributions.
- (3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets, unless the market value of assets is used in the measurement.

SECTION B

FUNDING RESULTS

Present Value of Future Benefits and Accrued Liability

Determination of Unfunded Accrued Liability as of September 30, 2018

| | <u>All Divisions</u> |
|---|-------------------------|
| A. Accrued Liability | |
| 1. For retirees and beneficiaries | \$ 15,259,101,501 |
| 2. For vested and other terminated members [#] | 446,094,112 |
| 3. For other inactive members* | 58,453,014 |
| 4. For present active members | |
| a. Value of expected future benefit payments | 3,640,762,696 |
| b. Value of future normal costs | <u>409,167,334</u> |
| c. Active member accrued liability: (a) - (b) | <u>3,231,595,362</u> |
| 5. Total accrued liability | 18,995,243,989 |
| B. Present Valuation Assets (Funding Value) | <u>12,494,360,972</u> |
| C. Unfunded Accrued Liability: (A.5) - (B) | <u>\$ 6,500,883,017</u> |
| D. Funding Ratio: (B) / (A.5) | <u>65.8%</u> |

[#] Includes pending refunds.

* Liability for employees who transferred to the DC pension plan in connection with PA 264 of 2011.

Experience Gain/(Loss)

A. Derivation of Actuarial Gain/(Loss):

| | |
|---|------------------|
| 1. Unfunded Actuarial Accrued Liability (UAAL) - Previous Valuation | \$ 5,996,764,719 |
| 2. Total Normal Cost (employer plus member) for Year Ending 9/30/2018 | 81,345,915 |
| 3. Total Contributions (employer plus member) for Year Ending 9/30/2018 | 686,337,886 |
| 4. Interest at 7.0% on: | |
| a. UAAL: $.07 \times (1)$ | 419,773,530 |
| b. Normal Cost and Contributions: $.035 \times [(2) - (3)]$ | (21,174,719) |
| c. Net Total: (a) + (b) | 398,598,811 |
| 5. Change in UAAL due to Benefit Changes | 0 |
| 6. Change in UAAL due to Assumption Changes | 1,158,776,460 |
| 7. Expected UAAL Current Year: | |
| (1) + (2) - (3) + (4c) + (5) + (6) | 6,949,148,019 |
| 8. Actual UAAL Current Year | 6,500,883,017 |
| 9. Experience Gain/(Loss): (7) - (8) | \$ 448,265,002 |

B. Approximate Portion of Gain/(Loss) due to Investments \$ 478,519,687

C. Approximate Portion of Gain/(Loss) due to Liabilities: (A.9) - (B) \$ (30,254,685)

The schedule above shows the net aggregate experience for the System. The next page shows this experience in detail.

Detailed Experience Gain/(Loss)

Gains/(Losses) during the Year Ended September 30, 2018 Resulting from Differences between Assumed and Actual Experience

| TYPE OF ACTIVITY | <u>Gain/(Loss)</u> |
|---|-----------------------|
| 1. Retirements (including disability retirement). If members retire at older ages or with lower final average pay than assumed, there is a gain. If younger ages or higher average pays, a loss. | \$ (25,423,458) |
| 2. Withdrawal from Employment (including death-in-service). If more liabilities are released by withdrawals and deaths than assumed, there is a gain. If smaller releases, a loss. | (921,198) |
| 3. Pay Increases . If there are smaller pay increases than assumed, there is a gain. If greater increases, a loss. | 3,291,228 |
| 4. Investment Income . If there is greater investment income than assumed, there is a gain. If less income, a loss. | 478,519,687 |
| 5. Death After Retirement . If retirants and inactive vested members live longer than assumed, there is a loss. If not as long, a gain. | (2,674,259) |
| 6. Rehires . Rehires into the System will generally result in an actuarial loss. | - |
| 7. Other . Miscellaneous gains and losses resulting from data adjustments, timing of financial transactions, etc. | <u>(4,526,998)</u> |
| 8. Composite Gain/(Loss) During Year. | \$ 448,265,002 |

Experience Gain/(Loss)

Five-Year History (Amounts Shown in Thousands)

| Plan Year Ending September 30 | Experience Gain/(Loss) | Gain/(Loss) Due to Investments | Actuarial Value of Investments | Investment Gain/(Loss) as % of Assets |
|--|-----------------------------------|---|---|--|
| 2018 | \$ 448,265 | \$ 478,520 | \$ 12,494,361 | 3.83% |
| 2017 | 618,769 | 726,398 | 11,883,784 | 6.11 |

¹ Includes miscellaneous income and is net of investment expenses.

² Includes transfers to/from the Health Advance Funding Subaccount.

Note: Data for the year 2007 and prior years was provided by the State of Michigan Department of Technology, Management and Budget - Financial Services.

SECTION D

CENSUS DATA

Summary of Participant Data by Category

| | <u>As of September 30</u> | |
|---|---------------------------|----------------------|
| | <u>2017</u> | <u>2018</u> |
| Retirees and beneficiaries currently receiving benefits: | | |
| Regular benefits | 48,987 | 49,385 |
| Survivor benefits | 7,377 | 7,364 |
| Disability benefits | <u>3,320</u> | <u>3,261</u> |
| Total | 59,684 | 60,010 |
| Current Employees: | | |
| Vested | 10,319 | 9,025 |
| Non-vested | <u>140</u> | <u>103</u> |
| Total | 10,459 | 9,128 |
| Inactive participants entitled to benefits and not yet receiving them*: | <u>3,986</u> | <u>3,817</u> |
| Total Participants | <u><u>74,129</u></u> | <u><u>72,955</u></u> |

* Includes members who have chosen to participate in Group 3 (DB/DC Blend) and have not yet commenced their pension benefits.

*** Type of Retirement**

- 1 – Normal retirement for age & service
- 2 – Survivor payment – normal or early retirement
- 3 – Duty disability retirement (incl. survivors)
- 4 – Non-duty disability retirement (incl. survivors)
- 5 – Survivor payment – duty death in service
- 6 – Survivor payment – non-duty death in service
- 7 – Retirees with supplemental benefits for early retirement incentive factors
- 8 – Retirees with reduced benefits for early retirement reduction factors

**** Selected Option**

- Reg. – Straight life allowance
- Opt. A – 100% survivor option
- Opt. B – 50% survivor option
- Opt. C – 75% survivor option
- Opt. E – Social Security equated
- Opt. E1 – Social Security equated w/100% survivor option
- Opt. E2 – Social Security equated w/50% survivor option
- Opt. E3 – Social Security equated w/75% survivor option

SECTION E

METHODS AND ASSUMPTIONS

Valuation Methods

Actuarial Cost Method - Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using an Individual Entry-Age Actuarial Cost Method having the following characteristics:

- (i) the annual normal cost for each individual active member, payable from the date of employment to the date of retirement, is sufficient to accumulate the value of the member's benefit at the time of retirement; and
- (ii) each annual normal cost is a constant percentage of the member's year by year projected covered pay.

Actuarial gains (losses), as they occur, reduce (increase) the Unfunded Actuarial Accrued Liability.

Financing of Unfunded Actuarial Accrued Liabilities - Unfunded actuarial accrued liabilities (full funding credit if assets exceed liabilities) were amortized by level (principal and interest combined) dollar contributions over a reasonable period of future years.

Present Value of Future Reconciliation Payments – Subsection 38(5) of the SERS statute provides for a process to reconcile actual employer contributions to the required employer contribution requirements. In order to avoid duplication of the employer contributions, the present value of future reconciliation payments is subtracted from the unfunded actuarial accrued liability. The net unfunded actuarial accrued liability is then amortized, resulting in the required amortization payment. Please refer to page A-1 and page E-8 for additional information.

Actuarial Value of System Assets - The actuarial value of assets recognizes assumed investment income fully each year. Differences between actual and assumed investment income are phased in over a closed five-year period. During periods when investment performance exceeds the assumed rate, actuarial value of assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, actuarial value of assets will tend to be greater than market value. The actuarial value of assets is not permitted to deviate from the market value of assets by more than 30%.

Valuation Assumptions

In accordance with section 38(1) of the SERS statute (Act 240 of the Public Acts of 1943, as amended), the actuarial assumptions are adopted by the Retirement Board and the Department of Management and Budget after consultation with the actuary and investment counsel. The actuarial assumptions were based upon the results of an Experience Study for SERS covering the period October 1, 2012 through September 30, 2017. A report dated June 29, 2018 presented the results of the Experience Study. In addition, the investment return assumption was updated again beginning with the September 30, 2018 valuation in accordance with the Dedicated Gains Policy adopted by the Board of Trustees. The actuarial assumptions represent estimates of future experience.

The rate of investment return was 6.70% a year, compounded annually net of investment expenses. The 6.70% assumption was first used for the September 30, 2018 valuation of the System. The assumed real rate of investment return is the rate of investment return in excess of either wage inflation or price inflation. Considering a wage inflation assumption of 2.75% and a price inflation assumption of 2.25%, the 6.70% nominal rate of investment return translates into a real rate of investment return of 3.95% over wage inflation and 4.45% over price inflation.

The rates of salary increase used for individual members are in accordance with the table below. This assumption is used to project a member's current pay to the pay upon which System benefits will be based. These rates were first used for the September 30, 2018 valuation of the System.

| Sample Ages | Salary Increase Assumptions For an Individual Member | | |
|-------------|---|----------------|--------------------|
| | Merit & Seniority | Base (Economy) | Increase Next Year |
| 20 | 9.00% | 2.75% | 11.75% |
| 25 | 6.00 | 2.75 | 8.75 |
| 30 | 2.60 | 2.75 | 5.35 |
| 35 | 1.20 | 2.75 | 3.95 |
| 40 | 0.80 | 2.75 | 3.55 |
| 45 | 0.50 | 2.75 | 3.25 |
| 50 | 0.40 | 2.75 | 3.15 |
| 55 | 0.40 | 2.75 | 3.15 |
| 60 | 0.00 | 2.75 | 2.75 |
| 65 | 0.00 | 2.75 | 2.75 |
| Ref | 326 | | |

The charts shown in this section of the report may include a reference number (for example, 326 is used above). These reference numbers are used by GRS to track and identify assumption tables.

Valuation Assumptions

The mortality tables: The mortality tables used in this valuation of the System are described below:

- Healthy Male Retirees: RP-2014 Male Healthy Annuitant Mortality Table scaled by 93% and adjusted for mortality improvements using projection scale MP-2017 from 2006.
- Healthy Female Retirees: RP-2014 Female Healthy Annuitant Mortality Table scaled by 98% and adjusted for mortality improvements using projection scale MP-2017 from 2006.
- Disabled Male Retirees: RP-2014 Male Disabled Annuitant Mortality Table scaled by 100% and adjusted for mortality improvements using projection scale MP-2017 from 2006.
- Disabled Female Retirees: RP-2014 Female Disabled Annuitant Mortality Table scaled by 100% and adjusted for mortality improvements using projection scale MP-2017 from 2006.
- Male Active Members: RP-2014 Male Employee Mortality Table scaled by 100% and adjusted for mortality improvements using projection scale MP-2017 from 2006.
- Female Active Members: RP-2014 Female Employee Mortality Table scaled by 100% and adjusted for mortality improvements using projection scale MP-2017 from 2006.

| Sample Attained Ages | Future Life Expectancy (years)* | | | | | |
|----------------------------|---------------------------------|-------|-------------------------|-------|---------------------|-------|
| | Healthy Pre-Retirement | | Healthy Post-Retirement | | Disabled Retirement | |
| | Men | Women | Men | Women | Men | Women |
| 45 | 41.38 | 45.66 | 39.97 | 42.09 | 27.46 | 32.68 |
| 50 | 36.17 | 40.46 | 35.04 | 37.08 | 24.23 | 28.67 |
| 55 | 31.08 | 35.34 | 30.26 | 32.14 | 21.11 | 24.86 |
| 60 | 26.16 | 30.34 | 25.68 | 27.39 | 18.11 | 21.36 |
| 65 | 21.54 | 25.45 | 21.33 | 22.85 | 15.28 | 17.97 |
| 70 | 17.26 | 20.68 | 17.22 | 18.52 | 12.55 | 14.59 |
| 75 | 13.30 | 16.12 | 13.39 | 14.48 | 9.93 | 11.44 |
| 80 | 9.75 | 11.82 | 9.97 | 10.85 | 7.56 | 8.71 |

* Life expectancy in future years is determined by the fully generational MP-2017 projection scale. The sample values shown are for individuals with the indicated attained ages in 2018.

Valuation Assumptions

The rates of regular retirement used to measure the probability of eligible members retiring with an unreduced benefit during the next year are shown below. The corrections officers assumption was first used for the September 30, 2018 valuation of the System.

| Retirement Ages | Percent of Eligible Members Retiring | | |
|--------------------|--------------------------------------|-------------------------|--------|
| | Conservation Officers | Corrections Officers | Others |
| 45 | 28% | | |
| 46 | 28 | | |
| 47 | 28 | | |
| 48 | 28 | | |
| 49 | 28 | | |
| 50 | 28 | | |
| 51 | 28 | 35% | |
| 52 | 28 | 30 | |
| 53 | 28 | 20 | |
| 54 | 28 | 20 | |
| 55 | 28 | 23 | 15% |
| 56 | 28 | 25 | 14 |
| 57 | 28 | 25 | 10 |
| 58 | 28 | 18 | 10 |
| 59 | 28 | 18 | 11 |
| 60 | 28 | 18 | 14 |
| 61 | 28 | 18 | 13 |
| 62 | 50 | 32 | 22 |
| 63 | 40 | 24 | 19 |
| 64 | 40 | 22 | 16 |
| 65 | 60 | 25 | 25 |
| 66 | 50 | 50 | 22 |
| 67 | 50 | 50 | 21 |
| 68 | 50 | 50 | 20 |
| 69 | 50 | 50 | 22 |
| 70 | 100 | 100 | 50 |
| 71 | 100 | 100 | 60 |
| 72 | 100 | 100 | 70 |
| 73 | 100 | 100 | 80 |
| 74 | 100 | 100 | 90 |
| 75 | 100 | 100 | 100 |
| Ref | 1603 | 2840 | 1605 |

Note: For Conservation Officers, 40% are assumed to retire in their first year of eligibility for unreduced benefits (completion of 25 years of service).

Valuation Assumptions

The rates of early retirement used to measure the probability of eligible members retiring with reduced retirement benefits during the next year are shown below. These rates were first used for the September 30, 2018 valuation of the System.

| Retirement Ages | Percent of Eligible Members Retiring |
|--------------------|---|
| 55 | 3.0% |
| 56 | 3.0 |
| 57 | 3.0 |
| 58 | 3.5 |
| 59 | 3.5 |
| Ref | 2839 |

The rates of separation from active membership used in the valuation are shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members remaining in employment, and was first used for the September 30, 2018 actuarial valuation of the System.

| Sample Ages | Years of Service | Percent Separating Within Next Year |
|----------------|---------------------|--|
| All | 0 | 17.00 % |
| | 1 | 12.00 |
| | 2 | 8.00 |
| | 3 | 5.50 |
| | 4 | 4.50 |
| 20 | 5 & Over | 4.00 |
| 25 | | 3.50 |
| 30 | | 2.82 |
| 35 | | 2.38 |
| 40 | | 2.06 |
| 45 | | 1.84 |
| 50 | | 1.68 |
| 55 | | 1.60 |
| 60 | | 1.60 |
| Ref | | 1138 |

Valuation Assumptions

Rates of disability among active members used in the valuation are shown below, and were first used for the September 30, 2010 valuation of the System.

| Sample Ages | Percent Becoming Disabled Within Next Year | |
|----------------|---|--------------------|
| | Non-Duty Disability | Duty Disability |
| 25 | 0.03% | 0.00% |
| 30 | 0.05 | 0.01 |
| 35 | 0.10 | 0.01 |
| 40 | 0.20 | 0.02 |
| 45 | 0.34 | 0.04 |
| 50 | 0.47 | 0.06 |
| 55 | 0.92 | 0.08 |
| 60 | 2.10 | 0.11 |
| 65 | 2.30 | 0.16 |
| Ref. | 571 | 14 x .20 |

Unknown Data:

- Retired members with unknown gender were assumed to be female.
- Active members with unknown dates of birth were assumed to have an entry-age equal to 27.
- Active members with non-zero service who were reported without any annual pay were assumed to have pay equal to the average pay of the remaining active group.
- Frozen defined benefit amounts were estimated for active members who elected to participate in the DC Plan prospectively as a result of PA 264, when not supplied.
- Accrued benefits were estimated for inactive participants based upon the service and final average compensation provided in the data. If final average compensation was not supplied, the member was assumed to have a final average compensation equal to that of the average of the remaining group.
- Service amounts for Inactive members reported with zero service were assumed to have 10 years of service, the minimum requirement to vest.

Miscellaneous and Technical Assumptions

| | |
|--|---|
| <i>Administrative Expenses</i> | Administrative expenses are funded through an addition to the normal cost (approximately \$6.5 million). |
| <i>Benefit Service</i> | Exact fractional service is used to determine the amount of benefit. |
| <i>Decrement Operation</i> | Disability and withdrawal decrements do not operate during retirement eligibility. |
| <i>Decrement Timing</i> | Decrements of all types are assumed to occur mid-year. |
| <i>Defined Contribution (DC) Member Account Balance</i> | For purposes of determining the Tier 2 death and disability benefit contribution for the DC member account balance of Tier 2 members, a total contribution rate (employer and employee combined) of 9.40% per year was used. In addition, for valuation purposes, the interest rate credited on the DC member account balance is set equal to the valuation interest rate assumption. |
| <i>Eligibility Testing</i> | Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur. |
| <i>Employee Contributions</i> | Employee contributions were credited with interest at 3.5% per year. |
| <i>Forfeitures</i> | For vested separations from service, it is assumed that 0% of members separating will withdraw their contributions and forfeit an employer financed benefit. It was further assumed that the liability at termination is the greater of the vested deferred benefit (if any) or the member's accumulated contributions. |
| <i>Incidence of Contributions</i> | Contributions are assumed to be received continuously throughout the year. |
| <i>Liability Adjustments</i> | Retirement liabilities were increased by 1% to account for unused vacation time. Inactive vested member liabilities were increased by 2% to reflect the value of the death benefit provision. |
| <i>Marriage Assumption</i> | 75% of males and 60% of females were assumed to be married for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses for active member valuation purposes. |
| <i>Normal Form of Benefit</i> | A straight life benefit is the normal form of benefit. |
| <i>Pay Increase Timing</i> | Pay increases were assumed to be at the beginning of the fiscal year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date. |

Miscellaneous and Technical Assumptions

Reconciliation Payments

ORS provided the following schedule of reconciliation payments. For purposes of determining the present value of the reconciliation payments, it was assumed that payments occur in the middle of the fiscal year.

| Fiscal Year | Reconciliation Payment/(Credit) |
|--------------------|--|
| 2019 | \$ 4,003,464 |
| 2020 | 5,327,740 |
| 2021 | 5,025,880 |
| 2022 | 4,724,021 |
| 2023 | 3,335,264 |
| 2024 | 3,123,980 |

Service Credit Accruals

Members were assumed to accrue 1 year of service credit per year.

Service Purchase Load

Per ORS, \$7,176,899 has been reported for purchased service that has not been paid for yet by the members. This amount was included in the accrued liability, to account for the amounts included in the plan's reported assets for purchased service

SECTION F

PLAN PROVISIONS

Plan Provisions as of September 30, 2018

On December 15, 2011, the Governor signed Public Act 264 of 2011 into law. The legislation granted members a one-time opportunity to choose their future retirement plan which resulted in three distinct benefit groups within the State Employees' Retirement System Defined Benefit (DB) pension plan.

Group 1: DB Classified: Members who elected to remain in the DB plan for future years of service and contribute 4% of their annual compensation to the pension fund until they terminate state employment. The 4% member contributions began on April 1, 2012.

Group 2: DB 30: Members who elected to remain in the DB plan for future years of service and contribute 4% of pay until they complete 30 years of service. When they complete 30 years of service, they will switch to the State's Defined Contribution (DC) pension plan. The 4% member contributions began on April 1, 2012, and will continue until they switch to the DC plan or terminate state employment, whichever comes first.

Group 3: DB/DC Blend: Members who chose not to pay the 4% contributions and therefore became active participants in the DC pension plan for future years of service beginning April 1, 2012.

Group 2 and Group 3 members may be eligible to receive a pension benefit from the SERS DB plan based on service, compensation and the retirement benefit formula in effect as of their date of transfer into the DC plan. This benefit is payable upon meeting the retirement or other eligibility conditions of the DB plan.

Regular Retirement (no reduction factor for age):

Eligibility - Age 55 with 30 years of service; or age 60 with 10 or more years of service.

Unclassified Legislative employees, Executive Branch employees, or Judicial Branch employees are eligible for full retirement at age 60 with 5 or more years of service. Corrections Officers may retire at age 51 with 25 or more years of service; or age 56 with 10 or more years of service (the last 3 years must be in a covered position). Conservation Officers may retire after 25 years of service regardless of age. If a Conservation Officer is hired before 4/1/1991, 20 of the 25 years must be as a Conservation Officer. For those hired after 4/1/1991, 23 of the 25 years must be as a Conservation Officer (the last 2 years must be as a Conservation Officer).

Final Average Compensation - Regular retirement benefit is based on Final Average Compensation (FAC), which is usually the average of highest 3 consecutive years (2 years for Conservation Officers).

Annual Amount - Total service times 1.5% of FAC. For members with 20 or more years of service, a \$3,000 minimum annual benefit is payable. Corrections Officers receive an additional temporary supplement to age 62 equal to the product of supplemental service times 0.5% of FAC. Conservation Officers retiring after 25 years receive a benefit equal to 60% of FAC. For eligible Group 2 and Group 3 members, the benefit amount (regular retirement and any supplemental benefit) is determined as of the date of transfer to the DC pension plan, based on FAC and service at the time of transfer.

Plan Provisions as of September 30, 2018

Early Retirement (age reduction factor used):

Eligibility - Age 55 with 15 or more years of service.

Annual Amount - Computed as described above under “regular retirement” but reduced by ½ % for each month under age 60.

Deferred Retirement (vested benefit):

Eligibility - 10 years of service (5 years for unclassified persons in the executive or legislative branch). Benefit commences at age 60.

Annual Amount - Computed as described above under “regular retirement” based on service and FAC at termination of State employment for Group 1.

Duty Disability Retirement:

Eligibility - No age or service requirement.

Annual Amount - Disability age 60+: Computed as a regular retirement benefit with minimum benefit based on 10 years of service. Disability prior to age 60: To age 60, benefit is computed as a regular retirement benefit using service at the time of disability retirement with a minimum benefit of \$6,000 per year. Additional limitation such that benefit plus workers’ compensation does not exceed final compensation. At age 60, benefit is recomputed as a regular retirement benefit with service granted for period in receipt of disability benefit before age 60. If the member dies before age 60, benefits are payable to a surviving spouse computed as a regular retirement benefit but based on service at time of disability retirement plus elapsed time between date of retirement and death. Eligible Group 2 and Group 3 members may elect this benefit (in lieu of PA 264 benefits).

Non-Duty Disability Retirement:

Eligibility - 10 years of service.

Annual Amount - Computed as regular retirement benefit based on service and FAC at time of disability. Minimum annual benefit is \$600. Eligible Group 2 and Group 3 members may elect this benefit (in lieu of PA 264 benefits).

Plan Provisions as of September 30, 2018

Duty Death Before Retirement:

Eligibility - No age or service requirement.

Annual Amount - Surviving spouse receives annual benefit computed as a regular retirement benefit as if the deceased member retired the day before date of death and elected Option A. Benefit is based on member's service at time of death, or 10 years of service, whichever is greater. A minimum benefit of \$6,000 per year is payable. Children under age 21 each receive an equal share of 1/2 of the benefit payable (surviving spouse receives the other 1/2), to a maximum of 1/2 for all children. A given child's share of benefits terminates upon the child's marriage, death or attainment of age 21. In the event that there is no surviving spouse, the benefit is allocated equally among all children subject to the limitations described above. In the event that there is no surviving spouse or eligible children, benefits may be paid to an eligible, dependent parent. Benefits end upon the marriage or death of the surviving parent. Additional limitation such that benefit plus workers' compensation does not exceed final compensation. Eligible Group 2 and Group 3 members may elect this benefit (in lieu of PA 264 benefits).

Non-Duty Death Before Retirement:

Eligibility - 10 years of service. In the case of a deceased vested former member, the survivor benefit commences when the deceased former member would have attained age 60.

Annual Amount - Computed as a regular retirement benefit but reduced in accordance with a 100% Joint and Survivor form of payment. Eligible Group 2 and Group 3 members may elect this benefit (in lieu of PA 264 benefits).

Post Retirement Cost-of-Living Adjustments (COLA):

One-time upward adjustments have been made in 1972, 1974, 1976, 1977, and 1987. Beginning in 1983 some benefit recipients share in a distribution of a portion of investment income earned in excess of 8% annually (supplemental payment). Beginning in 1988 all benefit recipients are eligible for automatic 3% annual (non-compounded) benefit increases, with a maximum \$300 annual increase. Eligibility for the above benefits:

Retired before October 1, 1987 - Greater of supplemental payment or the combination of the 1987 one-time adjustment and the automatic increases.

Retired on or after October 1, 1987 - Automatic increases only.

Eligible members of Groups 1, 2 and 3 receive automatic post retirement COLA.

Plan Provisions as of September 30, 2018

Member Contributions:

Group 1 Members: 4% of annual pay effective April 1, 2012.

Group 2 Members: 4% of annual pay effective April 1, 2012 until the date of transfer to DC pension plan.

Group 3 Members: N/A

Defined Contribution Legislation (Public Act 487 of 1996):

New state employees hired on or after March 31, 1997 become participants in Tier 2 (*i.e.*, a defined contribution plan) rather than Tier 1 (*i.e.*, the above described defined benefit plan).

Active members on March 30, 1997 could irrevocably elect to terminate membership in Tier 1 and become participants in Tier 2. Elections had to be in writing and submitted between January 2, 1998 and April 30, 1998. Such members became Tier 2 participants on June 1, 1998, and had the actuarial present value of their Tier 1 accrued benefit transferred into Tier 2 by November 30, 1998.

An actuarially calculated supplemental disability or death-in-service benefit may be payable if a Tier 2 participant becomes disabled or dies in service.

Former Tier 1 Members:

A former non-vested member who is reemployed on or after January 1, 2014 is not eligible for membership in Tier 1. This type of member shall become a qualified participant in Tier 2, and shall be treated as being first employed by the State as of his or her date of reemployment.

Optional Forms of Payment:

The normal form of payment for a member is a straight life annuity.

Section 31 of the SERS statute gives retiring plan members the opportunity to elect an optional form of payment including:

- 100% Joint and survivor annuity with pop-up
- 75% joint and survivor annuity with pop-up
- 50% joint and survivor annuity with pop-up

Section 20 of the SERS statute permits a retiring plan member to elect a Social Security Equated optional form of payment.

The optional forms of payment are actuarially equivalent to the straight life annuity. Option factors are based upon the following: (1) investment return assumption 6.75%, (2) valuation morality assumptions for healthy retirees, (3) unisex percent 60% (*i.e.*, retiree assumed to be 60% male; beneficiary the opposite) and (4) calculation year of 2021. The pop-up provision is reflected in the factors.

SECTION G

GLOSSARY

Glossary

| | |
|---|---|
| <i>Actuarial Accrued Liability</i> | The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.” |
| <i>Accrued Service</i> | The service credited under the plan which was rendered before the date of the actuarial valuation. |
| <i>Actuarial Assumptions</i> | Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation. |
| <i>Actuarial Cost Method</i> | A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future plan benefits” between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.” |
| <i>Actuarial Equivalent</i> | A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan. |
| <i>Actuarial Present Value</i> | The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment. |
| <i>Amortization</i> | Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment. |
| <i>Experience Gain/(Loss)</i> | A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used. |

Glossary

| | |
|--|--|
| <i>Normal Cost</i> | The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as “current service cost.” Any payment toward the unfunded actuarial accrued liability is not part of the normal cost. |
| <i>Reserve Account</i> | An account used to indicate that funds have been set aside for a specific purpose and is not generally available for other uses. |
| <i>Unfunded Actuarial Accrued Liability</i> | The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as “unfunded accrued liability.” |
| <i>Valuation Assets</i> | The value of current plan assets recognized for valuation purposes. Generally based on market value plus a portion of unrealized appreciation or depreciation. |
