The Board of Trustees<br>Missouri Local Government Employees Retirement System<br>Jefferson City, Missouri

Submitted in this report are the compiled results of the 36th annual actuarial valuations for the Missouri Local Government Employees Retirement System, as amended through February 29, 2004.

The date of the valuations was February 29, 2004.
Actuarial valuations of individual participating employers are made for the purposes of (i) revising employer contribution rates and (ii) examining the reserve strength of each separately experience-rated group. These individual valuations are made annually for each employer who was participating as of the valuation date. Such valuations were made for 828 groups ( 499 employers).

Actuarial valuations are also made of retired life benefits being paid from the Benefit Reserve Fund to determine the financial condition of this pooled Fund.

The valuations were based upon data furnished by LAGERS staff concerning members, retirees and beneficiaries.

The financial assumptions used in making the valuations are shown in the Appendix of this report. Assumptions concerning future experience are needed for computing employer contribution rates. As time passes and actual experience develops, assumed and actual experiences are compared. From time to time one or more of the assumptions about the future are changed by the Board after consulting with the actuary. The noneconomic assumptions used in performing the 2004 valuations were adopted by the Board in conjunction with a five year experience investigation for the period ending February 29, 2000. The last major changes were to economic assumptions, which were first used in the 2001 valuations.

Your attention is directed particularly to the COMMENTS on pages 2 and 3, and to the SHORT CONDITION TEST on page B-6.

Based upon the 2004 valuations it is our opinion that LAGERS continues in sound condition in accordance with actuarial principles of level cost financing. The overall financial condition is strong.

Respectfully submitted,

Mita D. Drazilov, A.S.A., M.A.A.A. Judith A. Kermans, E.A., M.A.A.A.

## Comments on Valuation Results

Individual valuations of participating employers. There were 828 new employer contribution rates computed as of February 29, 2004. (Twenty-Five groups had no active employees and a dollar contribution was calculated for them. These twenty-five groups are excluded from the totals on this page.) Of the 828 new rates, 314 were decreases from the previous rates, 378 were increases from the previous rates and 136 were unchanged. Further detail is shown in section F. A ten year comparative schedule follows:

| Valuation |  |  |  |  |
| :---: | ---: | ---: | ---: | ---: |
| Date | Decreases | Unchanged | Increases | Total |
| $2-28-95$ | 403 | 67 | 185 | 655 |
| $2-29-96^{*}$ | 133 | 32 | 500 | 665 |
| $2-28-97$ | 356 | 89 | 241 | 686 |
| $2-28-98$ | 409 | 97 | 205 | 711 |
| $2-28-99$ | 382 | 117 | 232 | 731 |

| $2-28-03$ | 202 | 139 | 462 | 803 |
| $2-29-04$ | 314 | $\mathbf{1 3 6}$ | $\mathbf{3 7 8}$ | $\mathbf{8 2 8}$ |

* Revised financial assumptions and/or funding method.

Decreases in employer contribution rates are seldom a problem. Increases can be a problem. Upward pressure on computed employer contribution rates existed for many employers. This stemmed from the fact that their February 28, 2003 computed employer contribution rate was capped based upon the one percent maximum allowable increase in computed employer contribution rates (non benefit-change related). The decline in the investment markets in 2001 through 2003 has been and continues to be the primary cause of the contribution rate increases.

Investment return exceeded the assumed rate of return on a market value of assets basis as of February 29, 2004, mostly offsetting the scheduled unrecognized investment losses from prior years. This enabled the number of increases in employer contribution rates to decline from the previous year. The market value and actuarial value of assets are now virtually the same. This is a marked improvement over the prior year when actuarial value exceeded market value by $20 \%$. (Beginning in 2003, the actuarial value of assets is not allowed to deviate from the market value of assets by more than $20 \%$.)

Retired life experience. Financial activities were restructured in 1986. Sufficient reserves continue to provide benefit increases at the $4 \%$ maximum average annual rate, subject to inflation caps. The Benefit Reserve Fund funded ratio declined from $116.5 \%$ to $115.8 \%$ as of February 29 , 2004, due to slightly unfavorable investment experience based upon the actuarial value of assets and scheduled reserve transfers for retirements that occurred during the valuation year. Page B-11 has detail.

## Reserve Strength of Each Group Being Separately Experience-Rated

"Reserve strength" means the portion of accrued liabilities which are covered by accrued assets. The larger the portion, the greater the reserve strength. If liabilities become $100 \%$ covered by assets, the group is termed "fully funded."

At the time a local government joins LAGERS the reserve strength of that new employer is zero because there are no assets, while liabilities (for past service) have been generated.

Contributions to LAGERS are patterned so that reserve strength increases year by year.

However, this underlying pattern is being modified each year as actual financial experiences occur. Experiences more favorable than assumed cause reserve strength to increase more than planned, while less favorable experiences reduce reserve strength. Like snowflakes, no two groups have identical experiences.

In addition, reserve strength is lowered when a local government adopts a higher benefit formula (larger liabilities for past service are generated).

The hundreds of separately experience-rated groups within LAGERS have considerable differences in reserve strength. These differences are summarized on page B-8.

Financially, LAGERS consists of a large number of diverse groups, not a large number of clones of a single LAGERS average.

## Section A

Financial Principles

## Financial Principles and Operational Techniques of LAGERS

Promises Made, and To Be Paid For. As each year is completed, the system in effect hands an "IOU" to each member then acquiring a year of service credit -- the "IOU" says: "The Missouri Local Government Employees Retirement System owes you one year's worth of retirement benefits, payments in cash commencing when you qualify for retirement."

The related key financial questions are:
Which generation of taxpayers contributes the money to cover the IOU?
The present taxpayers, who receive the benefit of the member's present year of service?
Or the future taxpayers, who happen to be in Missouri at the time the IOU becomes a cash demand?

LAGERS intends that this year's taxpayers contribute the money to cover the IOUs being handed out this year. By following this principle, the employer contribution rate will remain approximately level from generation to generation -- our children and our grandchildren will contribute the same percents of pay we contribute now.
(There are systems which have a design for deferring contributions to future taxpayers lured by a lower contribution rate now and putting aside the fact that the contribution rate must relentlessly grow much greater over decades of time -- consume now, and let your children face your financial pollution after you've retired.)

An inevitable by-product of the level-cost design is the accumulation of reserve assets, for decades, and the income produced when the assets are invested. Invested assets are a by-product and not the objective. Investment income becomes in effect the 3rd contributor for benefits to employees, and is interlocked with the contribution amounts required from employees and employers.

Translated to actuarial terminology, this level-cost objective means that the contribution rates must total at least the following:

Normal Cost (the cost of members' service being rendered this year)
... plus ...
Interest on Unfunded Actuarial Accrued Liabilities (unfunded actuarial accrued liabilities are the difference between: liabilities for members' service already rendered; and the accrued assets of the governmental unit in the plan).

Computing Contributions To Support System Benefits. From a given schedule of benefits and from the employee data and asset data furnished, the actuary determines the contribution rates to support the benefits, by means of an actuarial valuation and a funding method.

An actuarial valuation has a number of ingredients such as: the rate of investment return which plan assets will earn; the rates of withdrawal of active members who leave covered employment before qualifying for any monthly benefit; the rates of mortality; the rates of disability; the rates of pay increases; and the assumed age or ages at actual retirement.

In making an actuarial valuation the system must assume what the above experience will be, for the next year and for decades in the future. Only the subsequent actual experience of the System can indicate the degree of accuracy of the assumptions.

Reconciling Differences Between Assumed Experience and Actual Experience. Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions and regardless of the skill of the actuary and the calculations made. The future can be predicted with considerable but not complete precision, except that inflation seems to defy reliable prediction.

LAGERS copes with these continually changing differences by having annual actuarial valuations, separately for each participating employer group. Each annual actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is continually changing employer contribution rates.

Generally, the size of an annual change in employer rate is less than one percent of payroll (up or down), particularly for the larger groups, where activities of one or two employees have little effect on the group's status. In periods of volatile investment markets, groups with large Employer Accumulation Fund (EAF) balances may experience larger changes in computed rates.

To avoid causing employer budget problems, LAGERS provides a maximum annual increase of one percent of payroll for any one participating employer. Historically, this limit has generally not been needed (the February 28, 2003 valuations being a particular exception). Beginning with the February 28, 1999 valuations, the maximum allowed annual decrease in an employer contribution rate is also one percent of payroll, unless it is clear that a larger decrease will likely be long term in nature.

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

Economic Risk Areas
Rates of investment return
Rates of pay increase
Changes in active member group size
Non-Economic Risk Areas
Ages at actual retirement
Rates of mortality
Rates of withdrawal of active members (turnover)
Rates of disability

## The Actuarial Valuation Process

The actuarial valuation is the mathematical process by which the contribution rate is determined, and the flow of activity constituting the valuation may be summarized as follows:
A. Covered people data, furnished by plan administrator, including:

Retired lives now receiving benefits
Former employees with vested benefits not yet payable
Active employees
B. + Asset data (cash \& investments), furnished by plan administrator
C. + Assumptions concerning future financial experiences in various risk areas, which assumptions are established by the Board of Trustees after consulting with the actuary
D. + The funding method for determining employer contributions (the long-term, planned pattern for employer contributions)
E. + Mathematically combining the assumptions, the funding method, and the data
F. = Determination of:

Plan financial position
and/or New Employer Contribution Rate.

* Includes changes in employer contribution rates due to actual experience, changes in actuarial assumptions and changes in actuarial methods. It does not include changes in employer contribution rates due to benefit program changes.

In broad terms, the smaller the group, the greater the chance of a relatively large change in employer rate from one year to the next.

# Missouri LAGERS Change in Employer Contribution Rate* By Valuation Group 

Decreases

* Includes changes in employer contribution rates due to actual experience, changes in actuarial assumptions and changes in actuarial methods. It does not include changes in employer contribution rates due to benefit program changes.

## Schedule of Funding Progress

Each time a new employer joins the System, or an employer adopts a higher level of benefits, unfunded actuarial accrued liabilities are created. The law governing the System requires that these additional obligations be financed systematically over a period of future years.

In an inflationary economy the value of dollars is decreasing. This environment results in employee pays increasing in dollar amounts, retirement benefits increasing in dollar amounts, and then, unfunded actuarial accrued liabilities, all at a time when the actual substance of these items may be decreasing. Looking at just the dollar amounts of unfunded actuarial accrued liabilities can be misleading. Unfunded actuarial accrued liability dollars divided by active employee payroll provides an index which helps understanding. The smaller the ratio of unfunded liabilities to active member payroll, the stronger the System.

## \# Revised actuarial assumptions

Each employer participating in the System is financially responsible for its own obligation. Accordingly, the aggregate numbers presented on this and the following pages are indicative only of the overall condition of the System and are not indicative of any one employer.
Factors that had a downward effect on the funded ratio this valuation year include:

- Employers adopting new benefit programs. For example, before reflecting the benefit changes adopted by political subdivisions during the year, the 2-28-03 and 2-29-04 Funded Ratios would have been $97.6 \%$ (instead of $96.4 \%$ ) and $96.3 \%$ (instead of $95.9 \%$ ), respectively.
- New employers joining LAGERS (who at time of joining do not have assets on hand to cover actuarial accrued liabilities associated with past service).
- The planned reduction in funding levels (through reduced employer contributions) for employers that are over $100 \%$ funded.
- Slightly unfavorable investment experience based on the actuarial value of assets.

Factors that had an upward effect on the funded ratio this valuation year include scheduled employer contributions.

## Short Condition Test

The LAGERS funding objective is to meet long-term benefit promises through contributions that remain approximately level from year to year as a percent of member payroll. If the contributions to the System are level in concept and soundly executed, the System will pay all promised benefits when due -- the ultimate test of financial soundness. Testing for level contribution rates is the long-term test.

A short condition test is one means of checking a system's progress under its funding program. In a short condition test, the plan's present assets (cash and investments) are compared with the actuarial accrued liabilities for: (1) active member contributions on deposit; (2) future benefits to present retired lives; and (3) service already rendered by active members. In a system that has been following the discipline of level percent of payroll financing, the liabilities for active member contributions on deposit and for future benefits to present retired lives will be fully covered by present assets (except in rare circumstances). In addition, the liabilities for service already rendered by active members will be partially covered by the remainder of present assets. The larger the funded portion of liability 3 , the stronger the condition of the system.

The schedule below illustrates the most recent 10 year history of the System's actuarial accrued liabilities and is indicative of the LAGERS policy of following the discipline of level percent of payroll financing.

## Employers Accumulation Fund

The Employers Accumulation Fund assets totaled \$1,697,031,492 as of February 29, 2004 based on the actuarial value of assets. The individual participating Employers Accumulation Fund accrued liabilities (entry age actuarial cost method) were computed to be $\$ 1,817,296,008$ as of that date.

Each time a new employer joins the System, or an employer adopts a higher level of benefit, unfunded accrued liabilities are created. The law governing the System requires that these additional EAF liabilities be financed systematically over a period of future years.

Each employer is financially responsible for its own EAF liabilities. Accordingly, the aggregate numbers presented for the Employers Accumulation Fund are indicative only of overall condition and not indicative of the status of any individual employer.

## Employers Accumulation Fund <br> Aggregate Accrued Liabilities and Actuarial Value of Assets Comparative Statement

| $2-29-04$ | $70,562,031$ | $70,562,031$ | 100.0 |

## Benefit Reserve Fund

The Benefit Reserve Fund assets as of February 29, 2004 totaled $\$ 1,026,668,962$ based on the actuarial value of assets. The present value of future benefits was computed to be $\$ 886,280,744$ as of that date.

When a member retires, there is transferred to the Benefit Reserve Fund a single sum reserve which is expected to cover all future pension benefits; this reserve is calculated based on assumptions about mortality and an assumed annual investment return rate of $4 \%$.

Beginning in 1986, each year LAGERS actual investment return rate is credited to the Benefit Reserve Fund. The excess, if any, of the actual investment return rate over the assumed 4\% provides the money from which the Board can grant benefit increases after retirement. Beginning in 1999 the investment return credit is limited if the funded ratio exceeds $140 \%$. Beginning in 2002 the threshold was changed to $125 \%$.

The most recent such benefit increase occurred October 1, 2003 and consisted of an overall increase of $4 \%$ or less.

\# Revised actuarial assumptions.
@ The overall benefit increase \% was 4.0\% even though individuals received varying benefit increase \%'s.

## Casualty Reserve Fund

Beginning with the 1989 valuation, at the time a disability benefit becomes payable there is transferred from the Casualty Reserve Fund to the Benefit Reserve Fund the difference between (i) the full employer reserve covering the disability benefit and (ii) the accrued service liability of the Employer Accumulation Fund for the member who became disabled.

Employer contributions to cover the transfers described above are determined on a pooled-group basis (not separately for each financing group). The contribution rates, varying by size of benefit formula, were last changed in 1996.

If there is a positive balance in the Casualty Reserve Fund at any time, it indicates that cumulative past contributions have fully funded the cumulative past obligations --- similarly, a negative balance would indicate that cumulative past contributions have fallen short of the target.

For actuarial valuation purposes, actuarial accrued liabilities equal the actuarial value of assets.

## Casualty Reserve Fund Actuarial Value of Assets at Valuation Dates Comparative Statement

@ Reflects special $\$ 10$ million transfer to the Casualty Reserve Fund.

## Section C

## Asset Data Used in the Valuations

# Reported Accrued Assets Available for Benefits <br> February 29, 2004 

| Statutory Funds | Reported <br> Assets | Actuarial Value <br> of Assets |
| :--- | ---: | ---: |
| Employers Accumulation Fund | $\$ 1,320,367,739$ | $\$ 1,697,031,492$ |
| Members Deposit Fund | $70,562,031$ | $70,562,031$ |
| Benefit Reserve Fund | $807,891,849$ | $1,026,668,962$ |
| Casualty Reserve Fund | $11,524,062$ | $14,644,778$ |
| Total | $\mathbf{\$ 2 , 2 1 0 , 3 4 5 , 6 8 1}$ | $\mathbf{\$ 2 , 8 0 8 , 9 0 7 , 2 6 3}$ |

The Actuarial Value of Assets is based on market value, but with a 5-year smoothing of the difference between projected investment return, based on the actuarial assumption, and actual market to market returns. The actuarial value of assets is not permitted to deviate from market value by more than $20 \%$. The derivation of the actuarial value of assets (also called the funding value of assets) is shown on pages C-3 and C-4. The funding value adjustment factor is applied to the reported cost value of assets of each employer. The funding value adjustment factor serves two purposes:

- it incorporates the balance in the Income-Expense Fund for actuarial valuation purposes, since it is not allocated until June 30, and
- it converts the reported cost value of assets to the actuarial value of assets.

The Employers Accumulation Fund represents employer contributions accumulated for benefits to or on behalf of present members.

The Members Deposit Fund represents employee contributions accumulated for (1) monthly benefits upon future retirements and (2) refunds upon termination if monthly benefits are not payable.

The Benefit Reserve Fund represents employer and employee reserves held for the monthly benefits being paid to present retired lives.

The Casualty Reserve Fund represents employer contributions accumulated for the added liability incurred when a member becomes a disability retirement.

The Income-Expense Fund represents investment income received less administrative expenses paid. At the end of the system fiscal year interest is paid to the other four Funds from this Fund. The February 29, 2004 balance in the Income-Expense Fund was used for valuation purposes.

## Investment Activities

A retirement system acquires and invests assets as the result of following the financial objective of level contribution rates. The Board of Trustees of LAGERS has the responsibility for seeing that the assets are invested effectively and within the limits imposed by law. The Board retains professional money managers to assist in the investment process, and reviews their activities throughout each year. The Board retains another professional firm to provide measurements of investment performance, and their reports are also reviewed regularly.

There follows a table showing investment credits to the various Funds of the system for the last 5 years.

## Rates of Investment Return Allocated to LAGERS Fund Accounts

|  | Investment Credits as \% of Fund Balance |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Year Ended <br> June 30 | Casualty <br> Reserve <br> Fund <br> A | Member <br> Deposit <br> Fund <br> B | Benefit <br> Reserve <br> Fund <br> C | Employer <br> Accumulation <br> Fund <br> D | Inflation <br> Loss \% <br> (CPI) |
| 2000 | $7.0 \%$ | $4.0 \%$ | $14.4 \%$ | $30.5 \%$ | $3.7 \%$ |
| 2001 | 7.0 | 4.0 | 3.1 | 5.8 | 3.2 |
| 2002 | 7.5 | 4.0 | $(15.6)$ | 0.0 | 1.1 |
| 2003 | 7.5 | 4.0 | $(5.4)$ | $(5.9)$ | 2.1 |
| 2004 | 7.5 | 4.0 | 11.4 | 11.8 | 3.2 |
| 5 Year Compound Average |  |  |  |  |  |
| $1.0 \%$ | $7.8 \%$ | $2.7 \%$ |  |  |  |

A. Casualty Reserve assets are for the non-accrued service portion of disability benefits to future disabled lives. The investment percent is the rate set for actuarial purposes.
B. Member Deposit assets are the contributions of present members. The investment percent, set by the Board, affects amounts payable to members who request a refund. The percent does not affect the monthly benefit of a retiring member.
C. Benefit Reserve assets are for benefits to present retired lives. The investment credit is the remainder of net investment return after crediting the Casualty Reserve assets. This revised allocation of investment credits is intended to provide the resources for additional benefit increases after retirement, and is based upon a 1986 change in the LAGERS law. Beginning in 1999 the investment credit to the Benefit Reserve Fund (BRF) is limited, if the funded ratio of the BRF exceeds $140 \%$. Beginning in 2002 the threshold was changed to $125 \%$. In addition, for the 2002 interest credits the BRF interest credit was further reduced to permit a $0.0 \%$ interest credit to the EAF.
D. Employer Accumulation assets are for benefits to future retired lives including the accrued service portion of disability benefits. The investment credit is the remainder of net investment return after crediting the Casualty Reserve assets, followed by a further adjustment for the investment credit to the Member Deposit assets (and beginning in 1999 for any reallocation of investment credits from the Benefit Reserve Fund). The Employer Accumulation Fund is responsible for covering liability increases resulting from inflation losses. The percentages shown include net realized capital gains on sale of investments (cost value).

## Missouri LAGERS <br> Development of Funding Value of Retirement System Assets

The asset valuation method recognizes assumed investment income (line E2) fully each year. Differences between actual and expected investment income (line E3) are phased in over a closed 5 year period. If in the future, total investment income (line E1) were always equal to assumed investment income (line E2), Funding Value and Market Value would be identical 4 years after the valuation date (line H).

Note: Asset values on this page differ slightly from asset values reported elsewhere in this report, due to a number of miscellaneous closing entries that are not included in the above amounts and rounding.

## Section D

## Benefit Provisions Considered in the Valuation

# Missouri LocAl Government Employees Retirement System Brief Summary of LAGERS Benefits and Conditions Evaluated and/or Considered Through February 29, 2004 (Section references are to RSMo) 

Voluntary Retirement. Sections 70.645 \& 70.600. A member may retire with an age \& service allowance after both (i) completing 5 years of credited service, and (ii) attaining the minimum service retirement age.

The minimum service retirement age is age 60 for a general employee and age 55 for a police or fire employee. Optionally, employers may also elect to provide for unreduced benefits for employees whose combination of years of age and years of service equals 80 or more.

Final Average Salary. Section 70.600. The average of a member's monthly compensation during the period of 60 consecutive months (or optionally, 36 consecutive months) of credited service producing the highest monthly average, which period is contained within the 120 consecutive months of credited service immediately preceding retirement.

Age \& Service Allowance. Section 70.655. The allowance, payable monthly for life, equals a specified percent of a member's final average salary multiplied by the number of years of credited service. Each employer elects the percent applicable to its members, from the following programs:

L-1 Benefit Program: 1.00\% for life
L-3 Benefit Program: 1.25\% for life
L-7 Benefit Program: 1.50\% for life
LT-4 Benefit Program: $1.00 \%$ for life, plus $1.00 \%$ to age 62
LT-5 Benefit Program: $1.25 \%$ for life, plus $0.75 \%$ to age 62
LT-8 Benefit Program: $1.50 \%$ for life, plus $0.50 \%$ to age 62
LT-4(65) Benefit Program: $1.00 \%$ for life, plus $1.00 \%$ to age 65
LT-5(65) Benefit Program: $1.25 \%$ for life, plus $0.75 \%$ to age 65
LT-8(65) Benefit Program: $1.50 \%$ for life, plus $0.50 \%$ to age 65
L-9 Benefit Program: $1.60 \%$ for life
LT-10(65) Benefit Program: $1.60 \%$ for life, $0.40 \%$ to age 65
L-6 Benefit Program: 2.00\% for life

The only LT benefit programs available for adoption after August 1, 1994 are the LT(65) programs.
Benefit program L-11, available only to groups not covered by social security, provides for $2.50 \%$ for life.
Subsequent to joining the System the governing body can elect to change benefit programs for the employees, but not more often than once every 2 years.

Early Allowance. Section 70.670. A member may retire with an early allowance after both (i) completing 5 years of credited service, and (ii) attaining age 55 if a general employee or age 50 if a police or fire employee.

The early allowance amount, payable monthly for life, is computed in the same manner as an age \& service allowance, based upon the service and earnings record to time of early retirement, but reduced to reflect the fact that the age when payments begin is younger than the minimum service retirement age. The amount of the reduction is $1 / 2 \%$ of $1 \%(.005)$ for each month the age at retirement is younger than the minimum service retirement age.

Deferred Allowance. Section 70.675. If a member leaves LAGERS-covered employment (i) before attaining the early retirement age, and (ii) after completing 5 years of credited service, the member becomes eligible for a deferred allowance; provided the former member lives to the minimum service retirement age and does not withdraw the accumulated contributions.

The deferred allowance amount, payable monthly for life from the minimum service retirement age, is computed in the same manner as an age \& service allowance, based upon the service and earnings record to time of leaving LAGERS coverage.

Deferred allowances are also payable any time after reaching the early retirement age, with the reduction for early retirement noted on the previous page.

Non-Duty Disability Allowance. Section 70.680. A member with 5 or more years of credited service who becomes totally and permanently disabled from other than duty-connected causes become eligible to receive a non-duty disability allowance computed in the same manner as an age \& service allowance, based upon the service \& earnings record to time of disability.

Duty Disability Allowance. Section 70.680. A member who becomes totally and permanently disabled from duty-connected causes becomes eligible to receive a duty disability allowance computed in the same manner as an age \& service allowance, based upon the earnings record to time of disability but based upon the years of credited service the member would have completed had the member continued in LAGERS-covered employment to age 60.

Death-in-Service. Section 70.661. Upon the death of a member who had completed 5 years of credited service, the eligible surviving dependents receive the following benefits:
(a) The surviving spouse receives an allowance equal to the Option A allowance (joint and $75 \%$ survivor benefit) computed based upon the deceased members' service \& earnings record to time of death.
(b) When no spouse benefit is payable, the dependent children under age 18 (age 23 if they are full-time students) each receive an equal share of $60 \%$ of an age \& service allowance computed based upon the deceased member's service \& earnings record to time of death.
(c) If the death is determined to be duty related, the 5 year service requirement is waived and the benefit is based on years of credited service the member would have completed had the member continued in LAGERScovered employment to age 60.

Benefit Changes After Retirement. Section 70.655. For retirements effective after September 28, 1975, there is an annual redetermination of monthly benefit amount, beginning the October first following 12 months of retirement. As of each October first the amount of each eligible benefit is redetermined as follows:
(a) Subject to the maximum in (b), the redetermined amount is the amount otherwise payable multiplied by: $100 \%$ plus up to $4 \%$, as determined by the LAGERS Board of Trustees, for each full year of retirement.
(b) The redetermined amount may not exceed the amount otherwise payable multiplied by the ratio of the Consumer Price Index for the immediately preceding month of June to the Consumer Price Index for the month of June immediately preceding retirement.

Member Contributions. Sections 70.690 \& 70.700. Each member contributes $4 \%$ of compensation beginning after completion of sufficient employment of 6 months of credited service.

If a member leaves LAGERS-covered employment before an allowance is payable, the accumulated contributions are refunded to the member. If the member dies, his accumulated contributions are refunded to a designated beneficiary.

The law governing LAGERS also has a provision for the adoption of a non-contributory plan in which the full cost of LAGERS participation is paid by the employer. Adoption of the non-contributory provisions may be done at the time of membership or a later date; however, a change from contributory to non-contributory or vice-versa may not be made more frequently than every 5 years. Under the non-contributory provisions there is no individual account maintained for each employee and no refund of contributions if an employee terminates before being eligible for a benefit.

Employer Contributions. Section 70.730. Each employer contributes the remainder amounts necessary to finance the employees' participation in LAGERS. Contributions to LAGERS are determined based upon level-percent-of-payroll principles, so that contribution rates do not have to increase over decades of time.

## Benefit Programs in Effect as of February 29, 2004

Benefit programs now available to each employer are:

| L-1, since 1967 | LT-8, since 1988 |
| :--- | :--- |
| L-3, since 1975 | LT-8(65), since 1994 |
| LT-4, since 1977 | L-9, since 1995 |
| LT-4(65), since 1994 | LT-10(65) since 1995 |
| LT-5, since 1977 | L-11, since 2000 |
| LT-5(65), since 1994 | Non-Contributory, since 1983 |
| L-6, since 1987 | 3 Year Final Average Salary (FAS), since 1984 |
| L-7, since 1988 | Rule of 80, since 1988 |

The only LT benefit programs that can be adopted after August 1, 1994 are the LT(65) programs.
Please see pages D-1 through D-3 for a summary of LAGERS provisions.
When the 2004 actuarial valuations were made, the Benefit Programs evaluated were as follows:

| FAS | Groups | Benefit Programs |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  | Totals |

## Section G

## Appendix

## SUMMARY OF <br> ASSUMPTIONS USED FOR LAGERS ACTUARIAL VALUATIONS Assumptions Adopted by LAGERS Board after Consulting with Actuary

The actuarial assumptions used in making the valuations are shown in this Appendix of the report.

## ECONOMIC ASSUMPTIONS

The investment return rate used in making the valuations was $7.5 \%$ per year, compounded annually (net after administrative expenses). The real rate of return is the portion of total investment return which is more than the inflation rate. Considering inflation recognition of $4 \%$, the $7.5 \%$ investment return rate translates to an assumed real rate of return of $3.5 \%$. Adopted 2001.

Pay increase assumptions for individual active members are shown for sample ages on pages G-4 and G-5. Part of the assumption for each age is for merit and/or seniority increase, and the other $4 \%$ recognizes inflation. Adopted 2001.

The active member payroll is assumed to increase 4\% annually, which is the portion of the individual pay increase assumptions attributable to inflation. Adopted 1987.

Post-retirement increases are assumed to be $2.88 \%$, compounded annually.

The number of active members per employer is assumed to continue at the present number. Adopted 1967.

## NON-ECONOMIC ASSUMPTIONS

The mortality table, for post-retirement mortality, used in evaluating allowances to be paid was the 1971 Group Annuity Mortality Table projected to 2000, set back 1 year for men and 7 years for women. The disability post-retirement rates were equal to the standard rates set forward 10 years. Related values are shown on page G-3. Adopted 2001.

The probabilities of age and service retirement are shown on page G-3. Adopted 2001.

The probabilities of withdrawal from service and death in service are shown for sample ages on pages G-4 and G-5. It is assumed that all contributory members terminating before age 40 or with less than 10 years service, and a percentage (General: 30\%, Police-Fire: 20\%) of contributory members terminating after age 40 with 10 or more years service, withdraw their contributions and forfeit any vested employer-financed benefit. The mortality table used to evaluate mortality among active members was the 1983 Group Annuity Mortality Table set back 0 years for men and 0 years for women. Adopted 2001.

An individual entry age actuarial cost method of valuation was used in determining age \& service allowance normal costs and the allocation of actuarial present values between service rendered before and after the valuation date. The entry-age actuarial cost method has the following characteristics:
(i) the annual normal costs for each individual active member, payable from the member's actual date of employment to the member's projected date of retirement are sufficient to accumulate the actuarial present value of the member's benefit at the time of retirement;
(ii) each annual normal cost is a constant percentage of the member's year by year projected covered pay.

Unfunded accrued liabilities are amortized by level (principal \& interest) percent of payroll contributions. Except for amortization of the liabilities associated with the Non-Contributory Refund provision, the minimum amortization period is 15 years. Adopted 1987.

Contribution rates for disability retirement are determined using a modified terminal funding method. Contribution rates are periodically adjusted based on the trend of the balance of the Casualty Reserve Fund (CRF). The funding objective is to have assets in the CRF sufficient to cover the future liabilities for disability retired lives. Adopted 1967.

Future service credit is always assumed to accrue at the rate of 1 year of credit every 12 calendar months. Lower service accrual rates (service breaks or less-than-full-time employment) or higher service accrual rates (addition of military credit or reinstatement of prior service) are reflected as they are reported. Any lower or higher accrual rates may result in small financial gains or losses when reported. Adopted 1967.

The form of benefit payment assumed in the valuation is the Life Option. However, for members with accumulated member contributions, the residual refund available upon an early death after retirement is approximated by assuming pension payments are made for at least 3 years. Adopted 1967.

Employer contribution dollars were assumed to be paid in equal installments throughout the employer fiscal year. Adopted 1967.

The Funding Value of Assets recognize assumed investment return fully each year. Differences between actual and assumed investment return are phased in over a closed 5 year period. Funding value is not permitted to deviate from market value by more than $20 \%$. Adopted 1995 and 2003, respectively.

The data about persons now covered and about present assets were furnished by the System's administrative staff. Although examined for general reasonableness, the data was not audited by the Actuary.

The actuarial valuation computations were made by or under the supervision of a Member of the American Academy of Actuaries (M.A.A.A.).

## Single Life Retirement Values (1971 Group Annuity Mortality Table projected to 2000, setback 1 year for men and 7 years for women, \& $\mathbf{i}=.075$ )

| $2 / 28 / 2001$ | 777 | 174,985 | 526.7 | 225 | 43 |
| $2 / 28 / 2002$ | 791 | 180,971 | 532.7 | 229 | 43 |
| $2 / 28 / 2003$ | 803 | 183,775 | 548.5 | 229 | 42 |
| $2 / 29 / 2004$ | 828 | 188,812 | 557.9 | 228 | 41 |

* A goal for LAGERS during the initial design activity in 1966 and 1967 was that the actuarial retainer fee be approximately $\$ 100$ annually per valuation group - - an amount substantially less than the amount the municipality would pay if it arranged independently for an actuarial valuation of comparable quality.

September 2, 2004

Mr. William R. Schwartz<br>Executive Secretary<br>Missouri Local Government<br>Employees Retirement System<br>701 West Main Street<br>Jefferson City, Missouri 65101

Dear Bill:
Please find enclosed 6 copies of the Compiled Report of the February 29, 2004 valuations for the participating employers of the Missouri Local Government Employees Retirement System.

Individual copies have been Federal Expressed to each Board member as well as to the auditor.

Sincerely,

Mita D. Drazilov
