August 23, 2013

The Board of Trustees  
Missouri Local Government Employees Retirement System  
Jefferson City, Missouri

**Submitted in this report** are the compiled results of the **45th annual actuarial valuations** for the Missouri Local Government Employees Retirement System, as amended through February 28, 2013. **The date of the valuations** was February 28, 2013.

**Actuarial valuations** of individual participating employers are made for the purposes of (i) revising employer contribution rates and (ii) examining the reserve strength of each separately experience-rated group. These individual valuations are made annually for each employer who was participating as of the valuation date. Such valuations were made for **1,031 groups (640 employers)**. Actuarial valuations are also made of retired life benefits being paid from the Benefit Reserve Fund to determine the financial condition of this pooled Fund.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board.

The signing actuaries are independent of the plan sponsor.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as: plan experience differing from that anticipated by the economic and demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of the actuary's assignment, the actuary did not perform an analysis of the potential range of such future measurements.

**The valuations were based upon data** furnished by LAGERS staff concerning members, retirees and beneficiaries.

**The financial assumptions** used in making the valuations are shown in the Appendix of this report. Assumptions concerning future experience are needed for computing employer contribution rates. As time passes and actual experience develops, assumed and actual experiences are compared. From time to time one or more of the assumptions about the future are changed by the Board after consulting with the actuary. The assumptions used in performing the 2013 valuations were adopted by the Board in conjunction with a five year experience investigation for the period ending February 28, 2010.

---

**Your attention is directed particularly** to the Comments on pages 2 through 4, and to the Short Condition Test on page B-6. Based upon the 2013 valuations, it is our opinion that **LAGERS continues to satisfy the actuarial principles of level cost financing**.

Mita Drazilov and Judith Kermans are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinion contained herein.

Respectfully submitted,

Mita D. Drazilov, ASA, MAAA

Judith A. Kermans, EA, MAAA, FCA

## COMMENTS ON VALUATION RESULTS

---

*Individual Valuations of Participating Employers.* There were 1,031 new employer contribution rates computed as of February 28, 2013. (Thirty-eight groups had no active employees and a dollar contribution was calculated for them. These thirty-eight groups are excluded from the totals on this page.) Of the 1,031 new rates, 595 were decreases from the previous rates, 359 were increases from the previous rates and 77 were unchanged. Further detail is shown in Section G. A ten year comparative schedule follows:

Valuation Date	Decreases	Unchanged	Increases	Total
2-29-2004	314	136	378	828
2-28-2005	300	128	418	846
2-28-2006*	640	27	198	865
2-28-2007	536	118	239	893
2-29-2008	577	110	233	920
2-28-2009	71	54	820	945
2-28-2010	201	63	707	971
2-28-2011*	230	41	724	995
2-29-2012	507	61	439	1007
<b>2-28-2013</b>	<b>595</b>	<b>77</b>	<b>359</b>	<b>1,031</b>

\* Revised financial assumptions and/or funding method.

Decreases in employer contribution rates are seldom a problem. Increases can be a problem. Decreases in computed employer contribution rates exceeded increases due primarily to better than expected investment return on an actuarial value of assets basis. However, rates for many groups still increased because they were at the 1% “employer cap” last year due to poor investment performance in 2008 and 2009. The employer contribution rate for these groups will continue to experience upward pressure until it reaches the actuarially determined employer contribution rate.

*Experience During Valuation Year.* Investment return was above the assumed rate of return on a market value of assets basis as of February 28, 2013. This adds to the phase-in effects of the unrecognized market gains from the years ended February 28, 2010 and February 28, 2011. There is still upward pressure on capped employer contribution rates (approximately 175 valuation groups). However, the market value of assets exceeds the actuarial value of assets by roughly 9% which puts some offsetting downward pressure on future contribution rates. (Beginning in 2003, the actuarial value of assets is not allowed to deviate from the market value of assets by more than 20%.)

## COMMENTS ON VALUATION RESULTS - CONTINUED

---

Section D of this report presents a summary of the analysis of the economic and non-economic risk areas. For the year ended February 28, 2013, the System experienced an actuarial gain of approximately \$154 million. This consisted of a recognized gain on assumed investment return and lower pay increases than assumed.

**Retired Life Experience.** The Benefit Reserve Fund (BRF) funded ratio increased from 90.9% to 95.0% as of February 28, 2013, due to lower than expected cost of living increases and scheduled reserve transfers for retirements that occurred during the valuation year. Please refer to page B-11 for detail.

The BRF funded ratio continues to be less than 100% due primarily to the recent market decline. While it is preferred to have a BRF funded ratio greater than 100%, it is not something that needs to be remedied immediately. However, it does require continued attention. Some of the ways in which a 100% funded ratio may be achieved over the next few years include:

- Investment income above the assumed rate of return,
- COLAs to existing retirees and beneficiaries lower than that assumed for valuation purposes, and
- Reduced interest credits to the Employer Accumulation Fund (EAF).

**Funded Ratio.** The funded ratio for the System as of the valuation date is 86.5% based on the actuarial value of assets. If the market value of assets were used, the funded ratio would be approximately 95.1%.

**COMMENTS ON  
RESERVE STRENGTH OF EACH GROUP BEING SEPARATELY EXPERIENCE-RATED**

---

"Reserve strength" means the portion of accrued liabilities which are covered by accrued assets. The larger the portion covered, the greater the reserve strength.

At the time a local government joins LAGERS the reserve strength of that new employer is zero because there are no assets, while liabilities (for past service) have been generated.

Contributions to LAGERS are patterned so that reserve strength increases year by year.

However, this underlying pattern is being modified each year as actual financial experiences occur. Experiences more favorable than assumed cause reserve strength to increase more than planned, while less favorable experiences reduce reserve strength. Like snowflakes, no two groups have identical experiences.

In addition, reserve strength is lowered when a local government adopts a higher benefit formula (larger liabilities for past service are generated).

---

The hundreds of separately experience-rated groups within LAGERS have considerable differences in reserve strength. These differences are summarized on page B-8.

Financially, LAGERS consists of a large number of diverse groups, not a large number of clones of a single LAGERS average.

---

**SECTION A**  
FINANCIAL PRINCIPLES

---

# FINANCIAL PRINCIPLES AND OPERATIONAL TECHNIQUES OF LAGERS

---

***Promises Made, and To Be Paid For.*** As each year is completed, the system in effect hands an "IOU" to each member then acquiring a year of service credit -- the "IOU" says: "The Missouri Local Government Employees Retirement System owes you one year's worth of retirement benefits, payments in cash commencing when you qualify for retirement."

The related *key financial questions* are:

***Which generation of taxpayers contributes the money to cover the IOU?***

The present taxpayers, who receive the benefit of the member's present year of service?

***Or the future taxpayers***, who happen to be in Missouri at the time the IOU becomes a cash demand?

***LAGERS intends that this year's taxpayers contribute the money to cover the IOUs being handed out this year.*** By following this principle, ***the employer contribution rate will remain approximately level from generation to generation*** -- our children and our grandchildren will contribute the same percents of pay we contribute now.

(There are systems which have a design for deferring contributions to future taxpayers lured by a lower contribution rate now and putting aside the fact that the contribution rate must relentlessly grow much greater over decades of time -- consume now, and let your children face your ***financial pollution*** after you've retired.)

An inevitable by-product of the level-cost design is the accumulation of reserve assets, for decades, and the income produced when the assets are invested. ***Invested assets are a by-product and not the objective.*** ***Investment income*** becomes in effect ***the third contributor*** for benefits to employees, and is interlocked with the contribution amounts required from employees and employers.

Translated to actuarial terminology, this level-cost objective means that the contribution rates must total at least the following:

Normal Cost (the cost of members' service being rendered this year)

... plus ...

Interest on Unfunded Actuarial Accrued Liabilities (unfunded actuarial accrued liabilities are the difference between: liabilities for members' service already rendered; and the accrued assets of the governmental unit in the plan).

***Computing Contributions to Support System Benefits.*** From a given schedule of benefits and from the employee data and asset data furnished, the actuary determines the contribution rates to support the benefits, by means of ***an actuarial valuation and a funding method.***

An actuarial valuation has a number of ingredients such as: the rate of investment return which plan assets will earn; the rates of withdrawal of active members who leave covered employment before qualifying for any monthly benefit; the rates of mortality; the rates of disability; the rates of pay increases; and the assumed age or ages at actual retirement.

In making an actuarial valuation the system must assume what the above experience will be, for the next year and for decades in the future. Only the subsequent actual experience of the System can indicate the degree of accuracy of the assumptions.

***Reconciling Differences Between Assumed Experience and Actual Experience.*** Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions and regardless of the skill of the actuary and the calculations made. The future can be predicted with considerable but not complete precision, except that inflation seems to defy reliable prediction.

LAGERS copes with these continually changing differences by having ***annual actuarial valuations***, separately for each participating employer group. Each annual actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is continually changing employer contribution rates.

***Generally, the size of an annual change in an employer rate is less than one percent of payroll (up or down),*** particularly for the larger groups, where activities of one or two employees have little effect on the group's status. In periods of volatile investment markets, groups with large Employer Accumulation Fund (EAF) balances may experience larger changes in computed rates.

To avoid causing employer budget problems, LAGERS provides a maximum annual increase of one percent of payroll for any one participating employer. Beginning with the February 28, 1999 valuations, the maximum allowed annual decrease in an employer contribution rate is also one percent of payroll, unless it is clear that a larger decrease will likely be long term in nature. (For example, if a change in active group size appears to not be temporary.)

**CASH BENEFITS LINE.** This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

**LEVEL CONTRIBUTION LINE.** Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

**Economic Risk Areas**

- Rates of investment return
- Rates of pay increase
- Changes in active member group size

**Non-Economic Risk Areas**

- Ages at actual retirement
- Rates of mortality
- Rates of withdrawal of active members (turnover)
- Rates of disability

## THE ACTUARIAL VALUATION PROCESS

---

The *actuarial valuation* is the mathematical process by which the contribution rate is determined, and the flow of activity constituting the valuation may be summarized as follows:

- A. ***Covered people data***, furnished by plan administrator, including:
  - Retired lives now receiving benefits
  - Former employees with vested benefits not yet payable
  - Active employees
  
- B. + ***Asset data*** (cash & investments), furnished by plan administrator
  
- C. + ***Assumptions concerning future financial experiences in various risk areas***, which assumptions are established by the Board of Trustees after consulting with the actuary
  
- D. + ***The funding method*** for determining employer contributions (the long-term, planned pattern for employer contributions)
  
- E. + ***Mathematically combining the assumptions, the funding method, and the data***
  
- F. = Determination of:
  - Plan financial position***
  - and/or ***New Employer Contribution Rate***.

---

\* Includes changes in employer contribution rates due to actual experience, changes in actuarial assumptions and changes in actuarial methods. It does not include changes in employer contribution rates due to benefit program changes.

In broad terms, the smaller the group, the greater the chance of a relatively large change in employer rate from one year to the next.

## CHANGE IN EMPLOYER CONTRIBUTION RATE\* BY VALUATION GROUP

---

### Increases

### Decreases

\* Includes changes in employer contribution rates due to actual experience, changes in actuarial assumptions and changes in actuarial methods. It does not include changes in employer contribution rates due to benefit program changes. (LAGERS provides a maximum annual increase of one percent of payroll for any one participating employer.)

## SCHEDULE OF FUNDING PROGRESS

Each time a new employer joins the System, or an employer adopts a higher level of benefits, unfunded actuarial accrued liabilities are created. The law governing the System requires that these additional obligations be financed systematically over a period of future years.

In an inflationary economy the value of dollars is decreasing. This environment results in employee pays increasing in dollar amounts, retirement benefits increasing in dollar amounts, and then, unfunded actuarial accrued liabilities, all at a time when the actual substance of these items may be decreasing. Looking at just the dollar amounts of unfunded actuarial accrued liabilities can be misleading. Unfunded actuarial accrued liability dollars divided by active employee payroll provides an index which helps understanding. The smaller the ratio of unfunded liabilities to active member payroll, the stronger the System.

Valuation Date	(a) Actuarial Value of Assets	(b) Entry Age Actuarial Accrued Liability	(b-a) Unfunded Accrued Liability (UAL)	(a/b) Funded Ratio	(c) Annual Covered Payroll	[(b-a)/c] UAL as a % of Covered Payroll
2-29-2004	\$ 2,808,907,263	\$ 2,929,171,779	\$ 120,264,516	95.9%	\$ 989,446,058	12.2%
2-28-2005	2,984,489,211	3,139,260,243	154,771,032	95.1	1,031,415,223	15.0
2-28-2006 #	3,224,173,714	3,383,152,937	158,979,223	95.3	1,082,349,535	14.7

2-28-2013	4,692,218,862	5,423,684,243	731,465,381	86.5	1,395,261,077	52.4

# Revised actuarial assumptions.

Each employer participating in the System is financially responsible for its own obligation. Accordingly, the aggregate numbers presented on this and the following pages are indicative only of the overall condition of the System and are not indicative of any one employer.

Factors that generally have a downward effect on the funded ratio include:

- Employers adopting new benefit programs. For example, before reflecting the benefit changes adopted by political subdivisions during the year, the 2-29-2012 and 2-28-2013 Funded Ratios would have been 83.6% (instead of 83.5%) and 86.8% (instead of 86.5%), respectively.
- New employers joining LAGERS (who at time of joining do not have assets on hand to cover actuarial accrued liabilities associated with past service). For example, before including new political subdivisions joining LAGERS during the year, the 2-28-2013 Funded Ratio would have been 86.7% (instead of 86.5%).
- The planned reduction in funding levels (through reduced employer contributions) for employers that are over 100% funded.

Factors that generally have an upward effect on the funded ratio include scheduled employer contributions and favorable investment experience.

## PORTION OF ACTUARIAL ACCRUED LIABILITIES COVERED BY VALUATION ASSETS

---

## VALUATION ASSETS AS A PERCENT OF ACTUARIAL ACCRUED LIABILITIES

---

## SHORT CONDITION TEST

The LAGERS funding objective is to meet long-term benefit promises through contributions that remain approximately level from year to year as a percent of member payroll. If the contributions to the System are level in concept and soundly executed, the System will *pay all promised benefits when due -- the ultimate test of financial soundness*. Testing for level contribution rates is the long-term test.

A short condition test is one means of checking a system's progress under its funding program. In a short condition test, the plan's present assets (cash and investments) are compared with the actuarial accrued liabilities for: (1) active member contributions on deposit; (2) future benefits to present retired lives; and (3) service already rendered by active members. In a system that has been following the discipline of level percent of payroll financing, the liabilities for active member contributions on deposit and for future benefits to present retired lives will be fully covered by present assets (except in rare circumstances). In addition, the liabilities for service already rendered by active members will be partially covered by the remainder of present assets. The larger the funded portion of liability 3, the stronger the condition of the system.

The schedule below illustrates the most recent 10 year history of the System's actuarial accrued liabilities and is indicative of the LAGERS policy of following the discipline of level percent of payroll financing.

### Comparative Schedule

Valuation Date	Entry Age Accrued Liability For			Actuarial Value of Assets	Portion of Accrued Liability Covered by Assets		
	(1) Active Member Contributions	(2) Retirants and Beneficiaries*	(3) Active Members (Employer Financed Portion)		(1)	(2)	(3)
	2-29-2004	\$ 70,562,031	\$ 1,026,668,962		\$ 1,831,940,786	\$ 2,808,907,263	100%
2-28-2005	72,252,574	1,098,286,478	1,968,721,191	2,984,489,211	100	100	92
2-28-2006 #	75,835,009	1,199,273,243	2,108,044,685	3,224,173,714	100	100	92

2-28-2011 #	98,127,911	1,737,107,211	3,002,188,189	3,945,085,880	100	100	70
2-29-2012	102,637,353	1,954,579,782	3,063,057,063	4,274,440,345	100	100	72
2-28-2013	107,120,593	2,132,575,405	3,183,988,245	4,692,218,862	100	100	77

# Revised actuarial assumptions.

\* Includes reserve for future benefit increases.

## EMPLOYERS ACCUMULATION FUND

---

*The Employers Accumulation Fund* assets totaled \$2,539,356,780 as of February 28, 2013 based on the actuarial value of assets. The individual participating Employers Accumulation Fund accrued liabilities (entry age normal cost method) were computed to be \$3,163,926,221 as of that date.

Each time a new employer joins the System, or an employer adopts a higher level of benefit, unfunded accrued liabilities are created. The law governing the System requires that these additional EAF liabilities be financed systematically over a period of future years.

*Each employer is financially responsible for its own EAF liabilities.* Accordingly, the aggregate numbers presented for the Employers Accumulation Fund are indicative only of overall condition and not indicative of the status of any individual employer.

### Aggregate Accrued Liabilities and Actuarial Value of Assets Comparative Statement

Valuation Date	Actuarial Value of Assets	Aggregate Accrued Liabilities	Ratio of Assets to Liabilities*
2-29-2004	\$1,697,031,492	\$1,817,296,008	93.4%
2-28-2005	1,796,054,158	1,950,825,190	92.1
2-28-2006#	1,926,024,466	2,085,003,689	92.4

## BENEFIT RESERVE FUND

*The Benefit Reserve Fund* assets as of February 28, 2013 totaled \$2,025,679,465 based on the actuarial value of assets. The present value of future benefits was computed to be \$2,132,575,405 as of that date.

When a member retires, there is transferred to the Benefit Reserve Fund a single sum reserve which is expected to cover all future pension benefits; this reserve is calculated based on assumptions about mortality and assumed annual investment return.

*Beginning in 1986*, each year LAGERS actual investment return rate is credited to the Benefit Reserve Fund. Investment return over the assumed rate provides the money from which the Board can grant benefit increases after retirement. Beginning in 1999 the investment return credit is limited if the funded ratio exceeds 140%. Beginning in 2002 the threshold was changed to 125%.

The most recent such benefit increase occurred October 1, 2012 and consisted of an overall increase of 4% or less.

### Actuarial Accrued Liabilities and Accrued Assets Comparative Statement

Annual Valuation Date	Pensions Being Paid	Benefit Increase % Last Oct. 1	Investment Return % Last June 30	Present Value of Future Benefits	Reserve for Future Experience	Accrued Liabilities	Actuarial Value of Assets	Ratio of Actuarial Value of Assets to PVFB

# Revised actuarial assumptions.

## CASUALTY RESERVE FUND

Beginning with the 1989 valuation, at the time a disability benefit becomes payable there is transferred from the Casualty Reserve Fund to the Benefit Reserve Fund the difference between (i) the full employer reserve covering the disability benefit and (ii) the accrued service liability of the Employer Accumulation Fund for the member who became disabled. Beginning September 2011, this procedure also occurs for duty related death-in-service cases. Employer contribution rates to the CRF will be monitored to see if this procedural change warrants an adjustment to the employer contribution rates.

Employer contributions to cover the transfers described above are determined on a pooled-group basis (not separately for each financing group). The contribution rates, varying by size of benefit formula, were last changed in 2011.

Benefit Formula	Employer Contribution Rate to the CRF
L-1, LT-4	0.2%
L-3, LT-5, L-7, LT-8	0.2%
L-9, LT-10, L-12, LT-14	0.3%
L-6, L-11	0.3%

If there is a positive balance in the Casualty Reserve Fund at any time, it indicates that cumulative past contributions have fully funded the cumulative past obligations --- similarly, a negative balance would indicate that cumulative past contributions have fallen short of the target. For actuarial valuation purposes, actuarial accrued liabilities equal the actuarial value of assets.

### Actuarial Value of Assets at Valuation Dates Comparative Statement

Valuation Date	Employer L-1 Contributions: Year Ended	Actuarial Value of Assets	Accrued Liabilities	Assets Expressed as Percents of Member Payroll	
				Total	Change
2-29-2004	0.5%	\$ 14,644,778	\$ 14,644,778	1.5%	0.5%

## **SECTION C**

### **ASSET DATA USED IN THE VALUATIONS**

---

**REPORTED ACCRUED ASSETS AVAILABLE FOR BENEFITS  
FEBRUARY 28, 2013**

---

<b>Statutory Funds</b>	<b>Reported Assets</b>	<b>Actuarial Value of Assets</b>
Employers Accumulation Fund	\$2,163,364,476	\$2,539,356,780
Members Deposit Fund	107,120,593	107,120,593
Benefit Reserve Fund	1,737,885,608	2,025,679,465
Casualty Reserve Fund	17,211,757	20,062,024
<b>Total</b>	<b>\$4,025,582,434</b>	<b>\$4,692,218,862</b>

*The Actuarial Value of Assets* is based on market value, but with a 5-year smoothing of the difference between projected investment return, based on the actuarial assumption, and actual market to market returns. The actuarial value of assets is not permitted to deviate from market value by more than 20%. The derivation of the actuarial value of assets (also called the funding value of assets) is shown on pages C-3 and C-4. The funding value adjustment factor is applied to the reported cost value of assets of each employer. The funding value adjustment factor serves two purposes:

- it incorporates the balance in the Income-Expense Fund for actuarial valuation purposes, since it is not allocated until June 30, and
- it converts the reported cost value of assets to the actuarial value of assets.

*The Employers Accumulation Fund* represents employer contributions accumulated for benefits to or on behalf of present members.

*The Members Deposit Fund* represents employee contributions accumulated for (1) monthly benefits upon future retirements and (2) refunds upon termination if monthly benefits are not payable.

*The Benefit Reserve Fund* represents employer and employee reserves held for the monthly benefits being paid to present retired lives.

*The Casualty Reserve Fund* represents employer contributions accumulated for the added liability incurred when a member becomes a disability retirement.

*The Income-Expense Fund* represents investment income received less administrative expenses paid. At the end of the system fiscal year interest is paid to the other four Funds from this Fund. The February 28, 2013 balance in the Income-Expense Fund was used for valuation purposes.

## INVESTMENT ACTIVITIES

A retirement system acquires and invests assets as the result of following the financial objective of level contribution rates. The Board of Trustees of LAGERS has the responsibility for seeing that the assets are invested effectively and within the limits imposed by law. The Board retains professional money managers to assist in the investment process, and reviews their activities throughout each year.

Presented below is a table showing investment credits to the various Funds of the system for the last 5 years.

### Rates of Investment Return Allocated to LAGERS Fund Accounts

Year Ended June 30	Investment Credits as % of Fund Balance				Inflation Loss % (CPI)
	Casualty Reserve Fund A	Members Deposit Fund B	Benefit Reserve Fund C	Employer Accumulation Fund D	
	2009	7.50%	4.0%	(9.1)%	
2010	7.50	4.0	5.4	5.4	1.1
2011	7.50	0.5	9.8	10.2	3.6
2012	7.25	0.5	8.7	9.1	1.7
2013	7.25	0.5	10.1	10.5	1.8
<b>5 Year Compound Average</b>			<b>4.7%</b>	<b>4.8%</b>	<b>1.3%</b>

- A. Casualty Reserve assets are for the non-accrued service portion of disability benefits to future disabled lives. The investment percent is the rate set for actuarial purposes.
- B. Member Deposit assets are the contributions of present members. The investment percent, set by the Board, affects amounts payable to members who request a refund. The percent does not affect the monthly benefit of a retiring member.
- C. Benefit Reserve assets are for benefits to present retired lives. The investment credit comes from the remainder of net investment return after crediting the Casualty Reserve assets. This revised allocation of investment credits is intended to provide the resources for additional benefit increases after retirement, and is based upon a 1986 change in the LAGERS law. Beginning in 1999 the investment credit to the Benefit Reserve Fund (BRF) is limited, if the funded ratio of the BRF exceeds 140%. Beginning in 2002 the threshold was changed to 125%. In addition, for the 2002 interest credits the BRF interest credit was further reduced to permit a 0.0% interest credit to the EAF.
- D. Employer Accumulation assets are for benefits to future retired lives including the accrued service portion of disability benefits. The investment credit comes from the remainder of net investment return after crediting the Casualty Reserve assets, followed by a further adjustment for the investment credit to the Member Deposit assets (and beginning in 1999 for any reallocation of investment credits from the Benefit Reserve Fund). The Employer Accumulation Fund is responsible for covering liability increases resulting from inflation losses. The percentages shown include net realized capital gains on sale of investments (cost value).

## DEVELOPMENT OF FUNDING VALUE OF RETIREMENT SYSTEM ASSETS

Year Ending February 28:	2009	2010	2011	2012
A. Actuarial Value Beginning of Year	\$3,957,198,044	\$3,330,518,508	\$3,592,254,795	\$3,944,916,214
B. Market Value End of Year	2,775,432,090	3,704,012,118	4,422,956,438	4,671,976,739
C. Market Value Beginning of Year	3,989,486,215	2,775,432,090	3,704,012,118	4,422,956,438

F4. Third Prior Year	23,790,110	28,006,850	(28,005,024)	(137,718,790)
F5. Fourth Prior Year	12,707,495	23,790,110	28,006,851	(28,005,024)
F6. Total Recognized Phase-Ins	(264,189,455)	24,302,368	92,211,049	60,158,495
G. <b>Actuarial Value End of Year</b>				
G1. Preliminary Actuarial Value End of Year: A+D+E3+F6	\$3,982,398,894	\$3,592,254,795	\$3,944,916,214	\$4,274,323,523
G2. Upper Corridor Limit: 120% x B	3,330,518,508	4,444,814,542	5,307,547,726	5,606,372,087
G3. Lower Corridor Limit: 80% x B	2,220,345,672	2,963,209,694	3,538,365,150	3,737,581,391
G4. Actuarial Value End of Year	\$3,330,518,508	\$3,592,254,795	\$3,944,916,214	\$4,274,323,523
H. Difference Between Market & Actuarial Value	(555,086,418)	111,757,323	478,040,224	397,653,216
I. Ratio of Actuarial Value to Market Value	120.0%	97.0%	89.2%	91.5%
J. Actuarial Value Adjustment Factor (ratio of actuarial value to EAF+MDF+CRF+BRF cost value)	0.9290	1.1052	1.1542	1.1487
K. Recognized Rate of Return	(15.67)%	8.23%	10.07%	8.78%
L. Market Rate of Return	(30.28)%	33.96%	19.67%	6.01%

The asset valuation method recognizes assumed investment income (line E3) fully each year. Differences between actual and expected investment income (line E4) are phased in over a closed 5 year period. If in the future, total investment income (line E1) were always equal to assumed investment income (line E3), Funding Value and Market Value would be identical 4 years after the valuation date (line H).

Note: Asset values on this page differ slightly from asset values reported elsewhere in this report, due to a number of miscellaneous closing entries that are not included in the above amounts and rounding.

## DEVELOPMENT OF FUNDING VALUE OF RETIREMENT SYSTEM ASSETS

**SECTION D**  
GAIN/LOSS ANALYSIS

---

## GAIN/(LOSS) ANALYSIS

---

**Purpose of Gain/Loss Analysis.** Regular actuarial valuations provide information about the composite change in unfunded actuarial accrued liabilities -- whether or not the liabilities are increasing or decreasing, and by how much.

However, valuations do not show the portion of the change attributable to each risk area within the Retirement System: the rate of investment income on plan assets; the rates of withdrawal of active members who leave covered employment; the rates of mortality; the rates of disability; the rates of salary increases; the assumed ages at actual retirement. In an actuarial valuation, assumptions are made as to what these rates will be for the next year and for decades in the future.

*The objective of a gain and loss analysis is to determine the portion of the change in unfunded actuarial accrued liabilities attributable to each risk area.*

The fact that actual experience differs from assumed experience is to be expected. The future cannot be predicted with precision. Changes in the valuation assumption for a risk area should be made when the differences between assumed and actual experience have been observed to be sizable and persistent. One year's gain and loss analysis may or may not be indicative of *long-term trends, which are the basis of financial assumptions.*

**DEVELOPMENT OF TOTAL GAIN/(LOSS)  
MARCH 1, 2012 TO FEBRUARY 28, 2013**

---

Unfunded Accrued Liabilities (UAL), March 1	\$845,833,853
Employer Normal Cost	129,405,348
Employer Contributions	176,627,845
Interest	59,611,139
Expected UAL Before Any Changes	858,222,495
Change from Benefit Changes Plus New Employers	27,446,754
Change from Revised Actuarial Assumptions	0
Expected UAL After All Changes	885,669,249
Actual UAL, February 28	731,465,381
<b>Gain/(Loss) for Year From Experience</b>	<b>\$ 154,203,868</b>

This page measures the actual gain or loss for the year after adjusting for the effect of benefit and assumption changes plus any new employers joining LAGERS during the year.

**ANALYSIS OF FINANCIAL EXPERIENCE  
FOR THE YEAR ENDED FEBRUARY 28, 2013**

---

*Gains and Losses in Pension Accrued Liabilities Resulting from  
Differences Between Assumed Experience and Actual Experience*

Type of Activity	Gain or (Loss) For Year Ended 2/28/2013
<b>Age &amp; Service Retirements.</b> If members retire at older ages or with lower final average pay than assumed, there is a gain. If younger ages or higher average pays, a loss.	\$ (4,033,549)
<b>Death-in-Service Benefits.</b> If survivor claims are less than assumed, there is a gain. If more claims, there is a loss.	569,036
<b>Withdrawal From Employment.</b> If more liabilities are released by withdrawals than assumed, there is a gain. If smaller releases, a loss.	5,976,079
<b>Pay Increases.</b> If there are smaller pay increases than assumed, there is a gain. If greater increases, a loss.	32,803,088
<b>Investment Income.</b> If there is greater investment return on assets than assumed, there is a gain. If less return, a loss.	126,713,780
<b>Retiree, Beneficiary and Deferred Activity.</b> Includes members living longer than expected, COLA increases different than expected, etc.	18,754,362
<b>Benefit Reserve Fund.</b> Release of reserve for future experience.	0
<b>Other.</b> Miscellaneous gains and losses resulting from data adjustments, timing of financial transactions, valuation methods, etc.	(26,578,928)
<b>Gain (or Loss) During Year From Experience</b>	<b>\$ 154,203,868</b>

**INVESTMENT GAIN (LOSS)**  
**FOR THE YEAR ENDED FEBRUARY 28, 2013**

---

Assets, Beginning of Year	\$4,274,323,523
Net Cash Flow	(17,911,887)
Assumed Investment Return	309,239,150
Expected Assets End of Year	4,565,650,786
Actual Assets End of Year	4,692,364,566
<b>Gain/(Loss) for Year</b>	<b>\$ 126,713,780</b>

**ACTIVE MEMBER POPULATION RECONCILIATION  
MARCH 1, 2012 TO FEBRUARY 28, 2013**

---

	<b>Actual</b>	<b>Expected</b>
Active Members Beginning of Year	32,690	
Plus New Hires	3,742	
Minus Retirements*	863	1,151.3
Minus Deaths	15	45.2
Minus Disabilities	60	#
Minus Other Terminations	2,654	1,850.8
<b>Active Members End of Year</b>	<b>32,840</b>	

\* Actual retirements include 87 retirees at or above the age where retirements are assumed to occur 100% of the time. Expected retirements include 369 retirees at or above the age where retirements are assumed to occur 100% of the time.

# Disability retirements are funded by assets in the pooled Casualty Reserve Fund and by past normal cost contributions for the disabled member.

**THROUGH FEBRUARY 28, 2013**  
**(SECTION REFERENCES ARE TO RSMO)**

---

**Voluntary Retirement.** Sections 70.645 & 70.600. A member may retire with an age & service allowance after both (i) completing 5 years of credited service, and (ii) attaining the minimum service retirement age.

The minimum service retirement age is age 60 for a general employee and age 55 for a police or fire employee. Optionally, employers may also elect to provide for unreduced benefits for employees whose combination of years of age and years of service equals 80 or more.

**Final Average Salary.** Section 70.600. The average of a member's monthly compensation during the period of 60 consecutive months (or optionally, 36 consecutive months) of credited service producing the highest monthly average, which period is contained within the 120 consecutive months of credited service immediately preceding retirement.

**Age & Service Allowance.** Section 70.655. The allowance, payable monthly for life, equals a specified percent of a member's final average salary multiplied by the number of years of credited service. Each employer elects the percent applicable to its members, from the following programs:

L-1 Benefit Program:	1.00% for life
L-3 Benefit Program:	1.25% for life
L-7 Benefit Program:	1.50% for life
LT-4 Benefit Program:	1.00% for life, plus 1.00% to age 62
LT-5 Benefit Program:	1.25% for life, plus 0.75% to age 62
LT-8 Benefit Program:	1.50% for life, plus 0.50% to age 62
LT-4(65) Benefit Program:	1.00% for life, plus 1.00% to age 65
LT-5(65) Benefit Program:	1.25% for life, plus 0.75% to age 65
LT-8(65) Benefit Program:	1.50% for life, plus 0.50% to age 65
L-9 Benefit Program:	1.60% for life
LT-10(65) Benefit Program:	1.60% for life, 0.40% to age 65
L-12 Benefit Program:	1.75% for life
LT-14(65) Benefit Program:	1.75% for life, 0.25% to age 65
L-6 Benefit Program:	2.00% for life
L-11 Benefit Program:	2.50% for life

The only LT benefit programs available for adoption after August 1, 1994 are the LT(65) programs.

Benefit programs L-9 and LT-10(65) are unavailable for adoption after August 1, 2005.

Benefit program L-11 is only available to groups not covered by Social Security.

Subsequent to joining the System the governing body can elect to change benefit programs for the employees, but not more often than once every 2 years.

**MISSOURI LOCAL GOVERNMENT EMPLOYEES RETIREMENT SYSTEM**  
**BRIEF SUMMARY OF LAGERS**  
**BENEFITS AND CONDITIONS EVALUATED AND/OR CONSIDERED**  
**THROUGH FEBRUARY 28, 2013**  
**(SECTION REFERENCES ARE TO RSMO)**  
**(CONTINUED)**

---

**Early Allowance.** Section 70.670. A member may retire with an early allowance after both (i) completing 5 years of credited service, and (ii) attaining age 55 if a general employee or age 50 if a police or fire employee.

The early allowance amount, payable monthly for life, is computed in the same manner as an age & service allowance, based upon the service and earnings record to time of early retirement, but reduced to reflect the fact that the age when payments begin is younger than the minimum service retirement age. The amount of the reduction is 1/2% of 1% (.005) for each month the age at retirement is younger than the minimum service retirement age.

**Deferred Allowance.** Section 70.675. If a member leaves LAGERS-covered employment (i) before attaining the early retirement age, and (ii) after completing 5 years of credited service, the member becomes eligible for a deferred allowance; provided the former member lives to the minimum service retirement age and does not withdraw the accumulated contributions.

The deferred allowance amount, payable monthly for life from the minimum service retirement age, is computed in the same manner as an age & service allowance, based upon the service and earnings record to time of leaving LAGERS coverage.

Deferred allowances are also payable any time after reaching the early retirement age, with the reduction for early retirement noted above.

**Non-Duty Disability Allowance.** Section 70.680. A member with 5 or more years of credited service who becomes totally and permanently disabled from other than duty-connected causes become eligible to receive a non-duty disability allowance computed in the same manner as an age & service allowance, based upon the service & earnings record to time of disability.

**Duty Disability Allowance.** Section 70.680. A member regardless of credited service who becomes totally and permanently disabled from duty-connected causes becomes eligible to receive a duty disability allowance computed in the same manner as an age & service allowance, based upon the earnings record to time of disability but based upon the years of credited service the member would have completed had the member continued in LAGERS-covered employment to age 60.

**Death-in-Service.** Section 70.661. Upon the death of a member who had completed 5 years of credited service, the eligible surviving dependents receive the following benefits:

- (a) The surviving spouse receives an allowance equal to the Option A allowance (joint and 75% survivor benefit) computed based upon the deceased members' service & earnings record to time of death.
- (b) When no spouse benefit is payable, the dependent children under age 18 (age 23 if they are full-time students) each receive an equal share of 60% of an age & service allowance computed based upon the deceased member's service & earnings record to time of death.

**MISSOURI LOCAL GOVERNMENT EMPLOYEES RETIREMENT SYSTEM**  
**BRIEF SUMMARY OF LAGERS**  
**BENEFITS AND CONDITIONS EVALUATED AND/OR CONSIDERED**  
**THROUGH FEBRUARY 28, 2013**  
**(SECTION REFERENCES ARE TO RSMO)**  
**(CONCLUDED)**

---

(c) If the death is determined to be duty related, the 5 year service requirement is waived and the benefit is based on years of credited service the member would have completed had the member continued in LAGERS-covered employment to age 60.

***Benefit Changes After Retirement.*** Section 70.655. For retirements effective after September 28, 1975, there is an annual redetermination of monthly benefit amount, beginning the October first following 12 months of retirement. As of each October first the amount of each eligible benefit is redetermined as follows:

- (a) Subject to the maximum in (b), the redetermined amount is the amount otherwise payable multiplied by: 100% plus up to 4%, as determined by the LAGERS Board of Trustees, for each full year of retirement.
- (b) The redetermined amount may not exceed the amount otherwise payable multiplied by the ratio of the Consumer Price Index for the immediately preceding month of June to the Consumer Price Index for the month of June immediately preceding retirement.

***Member Contributions.*** Sections 70.690 & 70.700. Each member contributes 4% of compensation beginning after completion of sufficient employment of 6 months of credited service.

If a member leaves LAGERS-covered employment before an allowance is payable, the accumulated contributions are refunded to the member. If the member dies, his accumulated contributions are refunded to a designated beneficiary.

The law governing LAGERS also has a provision for the adoption of a non-contributory plan in which the full cost of LAGERS participation is paid by the employer. Adoption of the non-contributory provisions may be done at the time of membership or a later date; however, a change from contributory to non-contributory or vice-versa may not be made more frequently than every 2 years. Under the non-contributory provisions there is no individual account maintained for each employee and no refund of contributions if an employee terminates before being eligible for a benefit.

***Employer Contributions.*** Section 70.730. Each employer contributes the remainder amounts necessary to finance the employees' participation in LAGERS. Contributions to LAGERS are determined based upon level-percent-of-payroll principles, so that contribution rates do not have to increase over decades of time.

## BENEFIT PROGRAMS IN EFFECT AS OF FEBRUARY 28, 2013

*Benefit programs now available* to each employer are:

L-1, since 1967	LT-8(65), since 1994
L-3, since 1975	L-9, since 1995
LT-4, since 1977	LT-10(65) since 1995
LT-4(65), since 1994	L-11, since 2000
LT-5, since 1977	L-12, since 2005
LT-5(65), since 1994	LT-14(65), since 2005
L-6, since 1987	Non-Contributory, since 1983
L-7, since 1988	3 Year Final Average Salary (FAS), since 1984
LT-8, since 1988	Rule of 80, since 1988

The only LT benefit programs that can be adopted after August 1, 1994 are the LT(65) programs. Benefit programs L-9 and LT-10(65) are unavailable for adoption after August 1, 2005. Please see pages E-1 through E-3 for a summary of LAGERS provisions.

When the 2013 actuarial valuations were made, the Benefit Programs evaluated were as follows:

General and Fire	23
General and Police and Fire	67
<b>Total</b>	<b>640</b>

## ACTIVE AND INACTIVE MEMBERS IN VALUATIONS FEBRUARY 28, 2013

---

Classification	Number of		Annual Payroll
	Members	Valuation Groups*	
Active Members			
General	24,959	633	\$1,020,277,481
Police	5,784	294	265,396,122
Fire	<u>2,097</u>	<u>104</u>	<u>109,587,474</u>
Total Actives	32,840	1,031	\$1,395,261,077
Inactive Members #	<u>10,734</u>		
Total Members	43,574		

\* Each Police group and each Fire group is evaluated separately. Each General group is evaluated separately, but also may be broken into sub-groups for separate financial experience if the employer desires separate employer rates for internal accounting purposes.

# Inactive members are individuals who terminated employment after 5 or more years of LAGERS service, with rights to a deferred benefit commencing at age 60 (age 55 for police and fire members). In addition, members who terminated with one employer and have worked or are now working for another LAGERS-covered employer are included in this number count ("linked members"). There are 7,218 linked records included in the above total.

---

**SECTION H**  
APPENDIX

---

**SUMMARY OF  
ASSUMPTIONS USED FOR LAGERS ACTUARIAL VALUATIONS  
ASSUMPTIONS ADOPTED BY LAGERS BOARD AFTER CONSULTING WITH  
ACTUARY**

---

*The actuarial assumptions used* in making the valuations are shown in this Appendix of the report.

**ECONOMIC ASSUMPTIONS** -----

*The investment return rate* used in making the valuations was 7.25% per year, compounded annually (net after administrative expenses). The real rate of return is the portion of total investment return which is more than the wage inflation rate. Considering wage inflation recognition of 3.5%, the 7.25% investment return rate translates to an assumed real rate of return of 3.75%. No specific price inflation assumption is required to perform the valuations. However, a price inflation assumption of 3.0% would be consistent with the other economic assumptions. Adopted 2011.

*Pay increase assumptions* for individual active members are shown for sample ages on pages H-4 and H-5. Part of the assumption for each age is for merit and/or seniority increase, and the other 3.5% recognizes wage inflation. Adopted 2011.

*The active member payroll* is assumed to increase 3.5% annually, which is the portion of the individual pay increase assumptions attributable to wage inflation. Adopted 2011.

*Post-retirement increases* are assumed to be 2.88%, compounded annually.

*The number of active members* per employer is assumed to continue at the present number. Adopted 1967.

**NON-ECONOMIC ASSUMPTIONS** -----

*The mortality table*, for post-retirement mortality, used in evaluating allowances to be paid was 105% of the 1994 Group Annuity Mortality (GAM) Table set back 0 years for men and 0 years for women. The disability post-retirement rates were equal to the standard rates set forward 10 years. The mortality table was established based upon the experience of the Missouri LAGERS membership in total. Based upon the experience observed during the most recent 5-year period study, it appears that the current table provides for an approximate 13% margin for future mortality improvement. Related values are shown on page H-3. Adopted 2011.

*The probabilities of age and service retirement* are shown on page H-3. Adopted 2011.

*The probabilities of withdrawal from service and death-in-service* are shown for sample ages on pages H-4 and H-5. It is assumed that all contributory members terminating before age 40 or with less than 10 years of service, and a percentage (General: 30%, Police-Fire: 20%) of contributory members terminating after age 40 with 10 or more years service, withdraw their contributions and forfeit any vested employer-financed benefit. The mortality table used to evaluate mortality among active members was 75% of the RP-2000 Combined Healthy Table. It was assumed that 50% of pre-retirement deaths would be duty related. Adopted 2011.

**An individual entry age normal cost method of valuation** was used in determining age & service allowance normal costs and the allocation of actuarial present values between service rendered before and after the valuation date. The entry age normal cost method has the following characteristics:

- (i) the annual normal costs for each individual active member, payable from the member's actual date of employment to the member's projected date of retirement are sufficient to accumulate the actuarial present value of the member's benefit at the time of retirement;
- (ii) each annual normal cost is a constant percentage of the member's year by year projected covered pay.

Unfunded accrued liabilities are amortized by level (principal & interest) percent of payroll contributions. Actuarial gains or losses for each employer are amortized over various closed periods ranging from 15 to 30 years. Benefit changes adopted by employers are amortized over a closed 30-year period. Once a 15-year period is reached, the amortization period becomes open. Adoption of the Non-Contributory Refund provision is amortized over a closed 15-year period. Adopted 1987.

**Contribution rates for disability retirement** are determined using a modified terminal funding method. Contribution rates are periodically adjusted based on the trend of the balance of the Casualty Reserve Fund (CRF). The funding objective is to have assets in the CRF sufficient to cover the portion of the present value of future benefits for future disability retired lives not covered by past normal cost contributions for the disabled member. Adopted 1967.

**Future service credit** is always assumed to accrue at the rate of 1 year of credit every 12 calendar months. Lower service accrual rates (service breaks or less-than-full-time employment) or higher service accrual rates (addition of military credit or reinstatement of prior service) are reflected as they are reported. Any lower or higher accrual rates may result in small financial gains or losses when reported. Adopted 1967.

**The form of benefit payment** assumed in the valuation is the Life Option. However, for members with accumulated member contributions, the residual refund available upon an early death after retirement is approximated by assuming pension payments are made for at least 3 years. Adopted 1967.

**Employer contribution dollars** were assumed to be *paid in equal installments* throughout the employer fiscal year. Adopted 1967.

**The Funding Value of Assets** recognize assumed investment return fully each year. Differences between actual and assumed investment return are phased in over a closed 5-year period. The funding value of assets is not permitted to deviate from the market value of assets by more than 20%. Adopted 1995 and 2003, respectively.

**The data about persons now covered and about present assets** were furnished by the System's administrative staff. Although examined for general reasonableness, the data was not audited by the Actuary.

-----

The actuarial valuation computations were made by or under the supervision of a Member of the American Academy of Actuaries (MAAA).

## MISCELLANEOUS AND TECHNICAL ASSUMPTIONS

---

<b>Expenses</b>	Assumed investment return is net of administrative and investment expenses.
<b>Marriage Assumption</b>	90% of male and 90% of female participants are assumed to be married for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses for active member valuation purposes.
<b>Pay Increase Timing</b>	Beginning of year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
<b>Decrement Timing</b>	Decrements of all types are assumed to occur mid-year.
<b>Eligibility Testing</b>	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
<b>Benefit Service</b>	Exact fractional service on the decrement date is used to determine the amount of benefit payable.
<b>Decrement Relativity</b>	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
<b>Incidence of Contributions</b>	Contributions are assumed to be received continuously throughout the employer's applicable fiscal year based upon the computed percent of payroll shown in each employer's individual report, and the actual payroll payable at the time contributions are made.
<b>Decrement Operation</b>	The mortality decrement does not operate during the first 5 years of service. The withdrawal decrement does not operate during retirement eligibility.
<b>Deferred Members' Retirement Age</b>	It was assumed that deferred members would retire at the later of age 60 (55 for police or fire) or their attained age.

# RELATIONSHIP OF ECONOMIC ASSUMPTIONS IN COMPUTING CONTRIBUTIONS TO A RETIREMENT SYSTEM

---

## Investment Return

An increase in this assumption reduces computed contributions. The assumption operates over all parts of an employee's lifetime.

## Pay Base

An increase in this assumption increases computed contributions. However, a 1% increase in this assumption, coupled with a 1% increase in Investment Return reduces computed contributions. This is because the Pay Base assumption operates only over an employee's working lifetime, while the Investment Return assumption operates over the employee's entire lifetime.

## Increases After Retirement

An increase in this element increases computed contributions.

---

If Investment Return, Pay Base, and Increases After Retirement are each increased by equal amounts, computed contributions remain the same (except in plans using Final Average Pay as a factor in computing benefits; the multi-year average used for Final Average Pay causes computed contributions to decrease slightly).

If Investment Return and Pay Base are increased by equal amounts, with no change in Increases After Retirement, computed contributions decrease – sometimes significantly. The decreases represent the projected devaluation of an employee's benefits following retirement.

# Investment Return and Inflation: Past and Future

## Inflation Distortions

Inflation's impact on investment return is not uniform from year to year.

Over the last 30 years, Real Return exceeded that range on average. However, for parts of the period it was actually negative. It is very difficult to maintain a long-term portfolio allocation during periods of negative real return.

### Annual Investment Return (including Income) expressed as REAL RETURN (Remainder after Price Inflation)

No. Years Ended December	Inflation (CPI)	Cash Equiv. (T Bills)	Bonds (Long Term)		Stocks (S & P 500)	Real Return for Sample Fund		
			US Treasury	Corporate (Sol. Bro.)		A	B	C
1/2008	0.1	1.5	25.8	8.7	(37.1)	(0.6)	(11.5)	(20.1)
1/2009	2.7	(2.5)	(17.1)	0.3	23.2	1.7	8.0	13.1
1/2010	1.5	(1.4)	8.5	10.7	13.4	9.7	10.4	11.0
1/2011	3.0	(2.9)	24.5	14.6	(0.9)	11.2	7.1	3.8
1/2012	1.7	(1.6)	1.6	8.8	14.1	7.2	8.9	10.4
5/1980	9.2	(1.3)	(6.9)	(6.2)	4.3	(2.6)	(0.4)	1.3
5/1985	4.8	5.2	11.5	12.3	9.4	10.7	10.2	9.8
5/1990	4.1	2.6	6.4	6.1	8.6	6.7	7.2	7.6
5/1995	2.8	1.5	10.0	9.1	13.4	10.0	10.8	11.3
5/2000	2.5	2.6	4.9	3.2	15.4	7.7	10.0	11.7
5/2005	2.5	(0.4)	5.1	6.6	(2.0)	3.4	2.0	0.7
5/2010	2.2	0.0	3.3	3.6	0.1	3.1	2.6	2.0
5/2011	2.3	(1.0)	8.2	6.4	(2.5)	4.6	2.7	1.1
5/2012	1.8	(1.4)	7.4	8.5	(0.1)	5.7	4.2	2.8
<b>30/2012</b>	<b>2.9</b>	<b>1.4</b>	<b>6.8</b>	<b>6.7</b>	<b>7.7</b>	<b>6.9</b>	<b>7.2</b>	<b>7.3</b>

#### Sample Funds (only three of many reasonable samples)

	A	B	C
Cash: T-Bills	10 %	10 %	10 %
Bonds: US	30	20	10
Bonds: Corp	30	20	15
Stock	30	50	65

For many pension plans, Benefit Increases after Retirement have fallen short of keeping up with inflation. The retired life group has been hurt more than the active life group. The investment return necessary for the indexing of benefits after retirement probably cannot be realized during a period of high inflation.

## Changes in Economic Assumptions within an Economic Environment of Inflation

There is powerful motivation to increase the assumed Investment Return used in actuarial calculations, with or without a related increase in Employee Pay Base, because such an assumption change decreases computed contributions. A contribution rate decrease (i) offers relief for employer budget problems and/or (ii) offers a "no cost" way to provide benefit increases.

The wisdom of Investment Return assumed for the future can be determined only by future events. Will the investment record of the next 30 years be the same as the last 30 Years? Will it be like the 5-year period ended in 1980? Better? Worse? What will happen when "Baby Boomers" swell the retired population?

## LAGERS RETAINER ACTUARIAL FEES 10 YEAR COMPARATIVE STATEMENT

---

Valuation Date As of	Number of Valuation Groups	Annual Actuarial Fees (nearest \$1)	Consumer Price Index (1967 is 100)	Average Fee per Group	
				Unadjusted Dollars	1967* Dollars
2-29-2004	828	\$188,812	557.900	\$228	\$41
2-28-2005	846	192,294	574.500	227	40
2-28-2006	865	198,378	595.200	229	38
2-28-2007	893	205,631	609.594	230	38
2-29-2008	920	210,579	634.139	229	36
2-28-2009	945	219,088	635.637	232	36
2-28-2010	971	248,740	649.259	256	39
2-28-2011	995	262,962	662.943	264	40
2-29-2012	1,007	274,957	681.977	273	40
2-28-2013	1,031	289,900	695.467	281	40

\* A goal for LAGERS during the initial design activity in 1966 and 1967 was that the actuarial retainer fee be approximately \$100 annually per valuation group - - - an amount substantially less than the amount the municipality would pay if it arranged independently for an actuarial valuation of comparable quality.

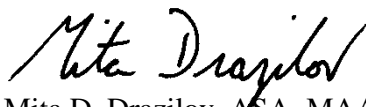

August 23, 2013

Mr. Keith Hughes  
Executive Secretary  
Missouri Local Government  
Employees Retirement System  
701 West Main Street  
Jefferson City, Missouri 65101

Dear Keith:

Please find enclosed 15 copies of the *Compiled Report of the February 28, 2013 annual actuarial valuations* for the participating employers of the Missouri Local Government Employees Retirement System.

Sincerely,

Mita D. Drazilov, ASA, MAAA
