Retirement Board
Public Employees' Retirement Administration
State of Montana

Dear Members of the Board:

At your request, we have performed an actuarial valuation of the Montana Public Employees' Retirement System as of June 30, 2006. Details about the actuarial valuation are contained in the following report. This report reflects the benefit provisions and contribution rates in effect on the valuation date.

Actuarial computations presented in this report are for purposes of analyzing the sufficiency of future contributions. Actuarial computations under GASB Statement No. 25 are for purposes of fulfilling financial accounting requirements. The computations in this report have been made on a basis consistent with our understanding of the Retirement Board's funding policies and GASB Statement No. 25. Determinations for purposes other than meeting these requirements may be significantly different from the results contained in this report. Accordingly, different determinations may be needed for other purposes.

Milliman's work product was prepared exclusively for MPERA for a specific and limited purpose. It is a complex, technical analysis that assumes a high level of knowledge concerning MPERA's operations, and uses MPERA's data, which Milliman has not audited. It is not for the use or benefit of any third party for any purpose. Any third party recipient of Milliman's work product who desires professional guidance should not rely upon Milliman's work product, but should engage qualified professionals for advice appropriate to its own specific needs.

Any distribution of this report must be in its entirety, including this cover letter, unless prior written consent is obtained from Milliman.

Respectfully submitted,

Mark O. Johnson, F.S.A., M.A.A.A., E.A.
Principal and Consulting Actuary

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006

SECTION 1
SCOPE OF THE REPORT

This report presents the results of our actuarial valuation of the System as of June 30, 2006. Actuarial computations presented in this report are for purposes of analyzing the sufficiency of future contributions.

In reading the Actuarial Certification in Section 2, please pay particular attention to the guidelines employed in the preparation of this report. We also comment on the sources and reliability of both the data and the actuarial assumptions upon which our findings depend. Those comments are the basis for our certification that this report is complete and accurate to the best of our knowledge and belief.

A summary of the findings resulting from this valuation is presented in Section 3 of the report and the underlying calculations are summarized in more detail in Section 4.

All of the calculations of the valuation were carried out using certain assumptions as to the future experience of the System in matters affecting the actuarial cost. Appendix A summarizes the most important of these assumptions and describes the actuarial methods used to calculate costs.

Appendix B outlines the benefit provisions of the System.

The membership data which were supplied to us are summarized in Appendix C.

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006

SECTION 2
ACTUARIAL CERTIFICATION

To the best of our knowledge and belief, this report is complete and accurate and contains sufficient information to fully and fairly disclose the funded condition of the Public Employees' Retirement System as of June 30, 2006.

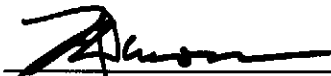

In preparing the valuation, we relied upon the financial information, membership data, and benefit provisions furnished by the System. Although we did not audit this data, we compared the data for this and the prior valuation and tested for reasonableness. Based on these tests, we believe the data to be sufficiently accurate for the purposes of our calculations. It should be noted that if any data or other information is inaccurate or incomplete, our calculations may need to be revised.

The Retirement Board has sole authority to determine the actuarial assumptions and methods used for the valuation of the System. The Board adopted all of the actuarial methods and assumptions used in the 2006 valuation.

The findings have been determined according to actuarial assumptions and methods that were chosen on the basis of recent experience of the System and of current expectations concerning future economic conditions. In our opinion, the assumptions used in the actuarial valuation are appropriate for purposes of the valuation, are internally consistent, and reflect reasonable expectations. The assumptions represent our best estimate of future conditions affecting the System. Nevertheless, the emerging costs of the System will vary from those presented in this report to the extent that actual experience differs from that projected by the assumptions.

The actuarial valuation was prepared in accordance with generally recognized and accepted actuarial principles and practices which are consistent with the applicable Standards of Practice adopted by the Actuarial Standards Board of the American Academy of Actuaries. In addition, the assumptions and methods used meet the parameters set for disclosures by Governmental Accounting Standards Board Statement No. 25.

The undersigned is an independent actuary, a Fellow of the Society of Actuaries, a Member of the American Academy of Actuaries, an Enrolled Actuary, and experienced in performing valuations for large public employee retirement systems.

Mark O. Johnson, F.S.A., M.A.A.A., E.A.
Principal and Consulting Actuary

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006

SECTION 3
SUMMARY OF FINDINGS AND ANALYSIS OF THE FUNDING LEVEL

The costs of a retirement system are not determined by the actuary. The ultimate costs of a system are determined by adding all of the benefits and expenses that are paid, and subtracting all investment earnings. These costs cannot be determined exactly until the last member or beneficiary has received the final benefit payment due.

The purpose of an actuarial valuation is to provide a timely best estimate of the ultimate costs in order to allocate them to the appropriate generation of members and taxpayers. The ideal goal is for contributions to remain essentially a constant percentage of covered payroll as long as the assumptions and methods reflect the emerging experience of the system and its members with reasonable accuracy.

Membership Data

We have developed the following comparisons between the membership in this and the prior actuarial valuations:

	<u>June 30, 2006</u>	<u>June 30, 2005</u>
Number of Members		
Retirees and Beneficiaries	15,654	15,220
Vested Terminated	2,530	2,418
Non-vested Terminated*	7,178	8,153
Active	<u>27,962</u>	<u>28,213</u>
Total Membership	53,324	54,004

* Includes 2 members with a zero account balance in 2005 and 5 members with a zero account balance in 2006.

More detailed membership statistics are shown in Appendix C.

Determination of Normal Cost

The **Normal Cost** represents the cost assigned to a member for a given year such that it would meet the continuing costs of that particular benefit, if contributed each year starting with the date of membership. The Entry Age Actuarial Cost Method is designed to produce a Normal Cost that remains a level percentage of salaries, so it is best expressed as a rate.

The following chart shows the Normal Cost from the 2005 valuation compared to the Normal Cost in this valuation. **Table 1** provides more details on the Normal Cost.

**MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006**

	2006 Actuarial Valuation	2005 Actuarial Valuation
Normal Cost Rate		
Service Retirement	9.15%	9.08%
Disability Retirement	.32	.32
Death	.54	.53
Withdrawal	2.16	2.19
Total Normal Cost Rate	12.17%	12.12%

The Normal Cost Rate is expected to remain fairly stable as long as the benefits are not amended, experience emerges as assumed, the demographic characteristics of the membership remain reasonably consistent, and the actuarial assumptions are not changed.

Determination of the Actuarial Liability

The next step in the actuarial valuation process is to project all future benefit payments from the System for current members and retirees. The level of benefits currently being paid is known, but assumptions are needed to estimate how long they will be paid, and the amount and timing of the payment of future benefits for active and inactive members who are not currently receiving payments.

The summation of the discounted values of all of the projected benefit payments for all current members, at the assumed rate of return, is called the **Actuarial Present Value of Projected Benefits**. Details are shown in **Table 2** and summarized below.

(\$000)	2006 Actuarial Valuation	2005 Actuarial Valuation
Actuarial Present Value of Projected Benefits		
Retired Members	\$ 1,767,477	\$ 1,634,266
Inactive Members	128,361	122,408
Active Members	2,860,478	2,772,310
Total PVPB	\$ 4,756,316	\$ 4,528,984

The **Actuarial Present Value of Future Normal Costs** is the value of all remaining Normal Costs expected to be received over the future working lifetime of current active members. The Actuarial Present Value of Future Normal Costs is subtracted from the Actuarial Present Value of Projected Benefits to arrive at the **Actuarial Liability**, the assets that would exist if the current Normal Cost Rate had been paid for all members since entry into the System, and if all actuarial assumptions had been realized. The following is a summary from **Table 2**.

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006

(\$000)	2006 Actuarial Valuation	2005 Actuarial Valuation
Actuarial Present Value of:		
Projected Benefits	\$ 4,756,316	\$ 4,528,984
Future Normal Costs	837,003	808,986
Actuarial Liability	\$ 3,919,313	\$ 3,719,998

Development of Actuarial Value of Assets

The next step in the valuation process is to calculate the **Actuarial Value of Assets** that will be used to determine the funding status of the System. The market value of assets was reported to us as of June 30, 2006. Details from the System's financial statements are contained in **Table 3** and **Table 4**.

Because the underlying calculations in the actuarial valuation are long-term in nature, it is advantageous to smooth out short-term fluctuations in the market value of assets. The asset smoothing method projects an Expected Value of Assets using the assumed rate of investment return, then recognizes the difference between the Expected Value and the Market Value over a four-year period. The calculation of the Actuarial Value of Assets is shown in **Table 5** and summarized below.

(\$000)	Gain or (Loss)	Reserve Factor	Smoothing Reserve	Value of Assets
Market Value on June 30, 2006				\$ 3,519,815
2003-04	\$ 143,930	25%	\$ 35,983	
2004-05	1,317	50%	658	
2005-06	32,120	75%	24,090	
Smoothing Reserve			\$ 60,731	(60,731)
Actuarial Value of Assets (Market Value less Smoothing Reserve)				\$ 3,459,084

Due to the asset smoothing method, there is \$60.7 million of net investment gains that have not yet been recognized (the difference between the Actuarial and Market Value of Assets). The current positive balance of the Smoothing Reserve will gradually be reflected in the Actuarial Value of Assets.

The Actuarial Value of Assets is less than the Market Value of Assets by less than 2%. **Table 6** shows a brief history of the difference between the Actuarial and Market Values of Assets. The table also shows an estimated rate of return for the last four years on both bases.

**MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006**

Unfunded Actuarial Liability

The **Unfunded Actuarial Liability** is the excess of the Actuarial Liability over the Actuarial Value of Assets, which represents a liability that must be funded over time. Contributions in excess of the Normal Cost are used to amortize the Unfunded Actuarial Liability. An **Actuarial Surplus** exists if the Actuarial Value of Assets exceeds the Actuarial Liability. The calculation of the Unfunded Actuarial Liability or Actuarial Surplus is shown in **Table 7** and summarized below.

(\$000)	2006 Actuarial Valuation	2005 Actuarial Valuation
Actuarial Liability	\$ 3,919,313	\$ 3,719,998
Actuarial Value of Assets	3,459,084	3,179,010
Unfunded Actuarial Liability	\$ 460,229	\$ 540,988
Funded Ratio	88%	85%

The **Funded Ratio** is equal to the Actuarial Value of Assets divided by the Actuarial Liability. A Funded Ratio of 100% means the Actuarial Value of Assets equals the Actuarial Liability, and the System could be financed by contributions equal to the Normal Cost, if all future experience emerges as assumed.

Actuarial Gains and Losses

Comparing the Unfunded Actuarial Liability as of two valuation dates does not provide enough information to determine if there were actuarial gains or losses. The correct comparison is between the Unfunded Actuarial Liability on the valuation date and the Expected Unfunded Actuarial Liability projected from the prior valuation date using the actuarial assumptions in effect for the one-year period.

Table 8 shows the Actuarial Liability as of June 30, 2005, and the elements to project that figure forward to June 30, 2006: the Normal Cost, less benefits paid, plus a charge for interest at the assumed rate of 8% per year.

The same table shows the Actuarial Value of Assets as of June 30, 2005, and the elements to project that figure forward to June 30, 2006: the net cash flow (contributions less benefits), plus a credit for interest at the assumed rate of 8%.

The following is a summary of the actuarial gains or losses during the one-year period.

**MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006**

	(\$000)
Unfunded Actuarial Liability	
Actual as of June 30, 2005	\$ 540,988
Expected as of June 30, 2006	\$ 533,845
Actual as of June 30, 2006	<u>460,229</u>
Actuarial (Gain) or Loss	\$ (73,616)
 (Gain) or Loss by Source	
Investment Gain	\$ (39,882)
Liability Gain	<u>(33,734)</u>
Net from All Sources	\$ (73,616)

Plan Choice Rate

The Plan Choice Rate is shown in Table 9-B. The Plan Choice Rate is updated in even numbered years' actuarial valuations.

The Plan Choice Rate will be adjusted, if necessary, when the results of the June 30, 2006 Actuarial Valuations have been published.

The current employer contribution rate for members of the Defined Contribution Retirement Plan (DCRP) and the Optional Retirement Plan (ORP) who would have been in PERS is determined as follows:

(Percent of Salary)	DCRP	ORP
Member Account in DCRP or ORP	4.19%	4.49%
Long-term Disability Plan (DCRP only)	0.30	0.00
Education Fund	0.04	0.04
Plan Choice Rate to DBRP (PCR)	<u>2.37</u>	<u>2.37</u>
Total Contribution Rate	6.90%	6.90%

The Plan Choice Rate (PCR) is the percent of the employer contribution allocated to the Defined Benefit Retirement Plan for members who choose the Defined Contribution Retirement Plan or the Optional Retirement Plan. The PCR is required by statute and actuarially determined to maintain the financial stability of the Defined Benefit Retirement Plan (DBRP).

The Legislature did not want the cost of the DBRP to increase due to the elections of members to join the alternative programs. The enabling legislation appropriately established the PCR to provide a mechanism to prevent the costs of the DBRP from increasing solely due to the transfer of members to the other plans.

Without the PCR, there are two reasons the DBRP costs could potentially increase; one is the financing of the Unfunded Actuarial Liability (UAL) at the time of the transfers, and the other is the potential for an increase in the Normal Cost Rate.

**MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006**

1. If there is an Unfunded Actuarial Liability in the DBRP at the time of the transfers, the simple fact that there will be fewer members in the DBRP to spread the amortization of the UAL will increase the rate of DBRP pay necessary to amortize the UAL. The PCR provides that the amortization of the DBRP UAL at the time of the transfer will be financed over the sum of payroll of the DBRP and DCRP members. This method ensures a continuation of the amortization schedule that was in place just prior to the transfers.

The legislation provided a starting point for this element of the PCR equal to 2.37% of the payroll of DCRP members and the ORP members who would have been in the DBRP.

2. Compared to the members who remain in the DBRP, if the transferring DCRP and ORP members are, on average, either younger at the time of hire, or have a shorter career, the DBRP Normal Cost Rate could increase. The DBRP membership will become, on average, more expensive because the average length of service at retirement will be longer or the career over which the benefit can be financed will be shorter. The dollar amount of the increase in the DBRP Normal Cost will be financed as a percentage of DCRP and ORP payroll. In other words, the DCRP and ORP members will be funding any increase in the Normal Cost of the DBRP due to their election not to participate in the DBRP.

The legislature did not provide a starting point for this element of the PCR because it depends on the demographics of those who elect the alternative programs.

Unfunded Actuarial Liability: Table 9-A shows the development of the Unfunded Actuarial Liability of the DBRP that is allocated to the members of the alternative programs. The Unfunded Actuarial Liability as of June 30, 2005 was brought forward to June 30, 2006.

	(\$000)
Unfunded Actuarial Liability	
PCR-UAL as of June 30, 2005	\$ 18,354
Adjustments as of June 30, 2006	
Assumed Earnings at 8%	1,468
PCR Contributions with 8% Earnings	(1,481)
Recognition of Prior Investment Losses	413
PCR-UAL as of June 30, 2006	\$ 18,754

Normal Cost Rate: The statute calls for the members of the alternative programs who could have been in the DBRP to finance the increase in the Normal Cost Rate associated with their transfer. **Table 9-B** shows that the Normal Cost Rate for the DBRP would have been 12.17% had the alternative program options not existed. The Normal Cost Rate in this valuation for the DBRP members is 12.17% of salaries. Since the Normal Cost Rate for the DBRP is equal to the Normal Cost Rate that the DBRP would have had if the alternative programs did not exist as of June 30, 2006, the Normal Cost Rate assigned to the Plan Choice Rate as of June 30, 2006, the PCT-NCR, is 0.00% of payroll for the alternative programs.

**MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006**

Amortization Test: The current PCR, less the PCR-NCR, will be available to amortize the remaining PCR-UAL. The initial amortization period was set at 12.75 years as of June 30, 1998. The amortization period will decline by one year each biennium, but the PCR will not change unless the amortization period is more than 10 years different than the scheduled amortization period.

	<u>Amortization of PCR-UAL</u>		
	<u>Baseline</u>	<u>Acceptable Range</u>	
1998 Valuation	12.75	2.75	22.75
2000 Valuation	11.75	1.75	21.75
2002 Valuation	10.75	0.75	20.75
2004 Valuation	9.75	n/a *	19.75
2006 Valuation	8.75	n/a *	18.75

* Assumes immediate amortization of PCR UAL.
Lower end only applies after 2002 if the PCR UAL is fully amortized.

Calculation of the PCR: For this display, we have used the acceptable range for the 2006 Valuation. The PCR, after being reduced for the PCR Normal Cost Rate, must be sufficient to amortize the PCR Unfunded Actuarial Liability over 18.75 years. If not, the PCR is increased such that the amortization period is reduced to 18.75 years. If the PCR will amortize the PCR-UAL over less than 18.75 years, it is not adjusted.

The following table shows that the 2.37% of payroll available will amortize the PCR-UAL over a period of 17.11 years. This is inside the statutory corridor, so the PCR does not need to be increased.

PCR – UAL as of June 30, 2006 (\$000)	\$ 18,754
PCR Available for Amortization	
Current PCR Amortization Rate	2.37%
Less, PCR – Normal Cost Rate	0.00%
PCR Available for Amortization	2.37%
Years to Amortize PCR – UAL from June 30, 2006	17.11 Years
Maximum Years to Amortize PCR – UAL	18.75 Years
Current PCR is Sufficient	

**MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006**

Calculation of Contribution Rate

The statutory funding rate is tested in the valuation to determine if it is sufficient to cover the Normal Cost Rate plus an amortization payment for the Unfunded Actuarial Liability, if any, over no more than 30 years. The calculations are shown in **TABLE 10** and summarized below.

	2006 Actuarial Valuation	2005 Actuarial Valuation
Statutory Funding Rate	13.80%	13.80%
Transfer to Education Fund	(0.04)	(0.04)
Normal Cost Rate	(12.17)	(12.12)
Available for Amortization	1.59%	1.64%
Unfunded Actuarial Liability of DBRP	\$ 460,229	\$ 540,988
Less, Funded by PCR	(18,754)	(18,354)
Net UAL for DBRP Funding	\$ 441,475	\$ 522,634
Years to Amortize	Does Not Amortize	Does Not Amortize

Based on the current Actuarial Value of Assets and all future experience emerging as assumed, the Unfunded Actuarial Liability will not be amortized over the next 30 years. As a point of interest, we have calculated the additional revenue needed to amortize the Unfunded Actuarial Liability over 30 years.

Normal Cost Rate	12.17%
30-Year Amortization Payment	2.60
30-Year Contribution Rate	14.77%
Current Statutory Rate for DBRP	13.80%
Less, Educational Fund	(0.04)
Available to Fund the DBRP	13.76%
Estimated Shortfall	1.01%

Based on the assumptions contained in this report, a funding rate of 14.77% of payroll would be sufficient to fund the current and projected benefits from the System. The 0.04% for the Educational Fund would be in addition to this rate.

Disclosure Information - GASB No. 25

The disclosure of the Schedule of Funding Progress and the Solvency Test calculated in accordance with Statement No. 25 of the Governmental Accounting Standards Board are shown in **Tables 11 and 12**.

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006

Appendix A

Actuarial Methods and Assumptions

This section of the report describes the actuarial methods and assumptions used in this valuation. These methods and assumptions have been chosen by the Retirement Board based on our recommendations. The Retirement Board has the sole authority to select the methods and assumptions used in this actuarial valuation. The recommendations were formed on the basis of recent experience of the System and on current expectations as to future economic conditions.

The assumptions are intended to estimate the future experience of the System and the members of the System in areas which affect the projected benefit flow and anticipated investment earnings. Any variations in future experience from that expected from these assumptions will result in corresponding changes in the estimated costs of the System's benefits.

In our opinion, the current actuarial methods and assumptions are reasonable and appropriate for this System. The assumptions were developed in accordance with generally recognized and accepted actuarial principles and practices that are consistent with applicable Standards of Practice adopted by the American Academy of Actuaries.

Records and Data

The data used in the valuation consist of financial information and records of age, service, account balances, benefits in pay status and income of contributing members, former contributing members and their survivors. All of the data were supplied by the System and are accepted for valuation purposes without audit.

Actuarial Cost Method

A fundamental principle in financing the liabilities of a retirement program is that the cost of its benefits should be related to when they are earned, rather than when they are paid. There are a number of methods in use for making a determination.

The funding method used in this valuation is the Entry Age Cost Method. Under this method the actuarial present value of projected benefits for each individual member included in the valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this actuarial present value allocated to a valuation year is called the Normal Cost. The portion of this actuarial present value not provided for at a valuation date by the actuarial present value of future Normal Costs is called the Actuarial Liability.

The excess of the Actuarial Liability over the Actuarial Value of Assets is called the Unfunded Actuarial Liability. If the Actuarial Value of Assets exceeds the Actuarial Liability, the difference is called the Actuarial Surplus.

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006

Asset Valuation Method

Asset values were supplied by the System and were accepted without audit by us. The Actuarial Value of Assets is the market value, adjusted by a four-year recognition of gains and losses.

Investment Return

The future investment earnings of the assets of the plan are assumed to accrue at a net annual rate of 8.00%, net of all administrative and investment-related expenses.

Interest on Member Contributions

Interest on member contributions is assumed to accrue at a net annual rate of 5.00%.

Future Salaries

Estimates of future salaries are based on two types of assumptions. Rates of increase in the general wage level of the membership are directly related to inflation, while individual salary changes due to promotion and longevity, referred to as the merit scale, occur even in the absence of inflation. The assumed increase in future salaries due to general wage growth is 4.25% per year. The merit scale, assumed in addition to general wage growth, is shown in Table A-2.

Service Retirement

The assumed rates of retirement used in this valuation are shown in Table A-3.

All vested terminated members are assumed to retire when first eligible for an unreduced benefit.

Disablement

The assumed rates of disablement are illustrated in Table A-4 at specified ages. We also assume that all disabilities are permanent, and no disabled member will recover and return to work.

Mortality

The probabilities of mortality are based on the following published tables:

Healthy Retirees, Beneficiaries and Non-Retired Members

Males 1994 Male Uninsured Pensioner Table (-1)

Females 1994 Female Uninsured Pensioner Table (-1)

Disabled Retirees

Males IRS Revenue Ruling 96-7 Male Table (-3)

Females IRS Revenue Ruling 96-7 Female Table (+1)

These rates are illustrated in Table A-5.

**MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006**

Other Terminations of Employment

The assumed rates of termination, other than for retirement, death, or disability, are shown in Table A-6.

Benefits for Terminating Members

The probability of a terminating member electing a refund of the member account balance is shown in Table A-7.

Probability of Marriage

100% of all non-retired members are assumed to be married. Male spouses are assumed to be three years older than female spouses.

Changes in Actuarial Assumptions Made for this Valuation

Provisions of Governing Law

All of the calculations contained in this report are based on our understanding of the benefit and eligibility provisions of the system. The provisions used in this valuation are summarized below for reference purposes.

Normal Retirement	Eligibility:	Age 65 regardless of membership service, or Age 60 and 5 years of membership service, or 30 years of membership service regardless of age.
	Benefit:	Years of service credit, multiplied by highest average compensation (highest 36 consecutive months), multiplied by $1/56^{\text{th}}$ if membership service at retirement is less than 25 years, or multiplied by $1/50^{\text{th}}$ if membership service at retirement is at least 25 years.
	Normal Form:	Monthly benefit for the life of the member, with a death benefit equal to the remaining balance of the member's contribution account.
Early Retirement	Eligibility:	Age 50 and 5 years of membership service, or 25 years of membership service regardless of age.
	Benefit:	Actuarial equivalent of the accrued benefit based on retirement at age 60 or 30 years of membership service.
Disability Retirement	Eligibility:	5 years of membership service
	Benefit:	If hired on or before February 24, 1991, the greater of (a) and (b) below: (a) Years of service credit, multiplied by highest average compensation, multiplied by 90% of $1/56^{\text{th}}$ ($1/50^{\text{th}}$ if 25 or more years of membership service), or (b) Highest average compensation multiplied by 25%.
		If hired after February 24, 1991: (a) Years of service credit, multiplied by highest average compensation, multiplied by $1/56^{\text{th}}$ ($1/50^{\text{th}}$ if 25 or more years of membership service).

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2005

Death before Retirement	Eligibility:	Prior to 5 years of membership service
	Benefit:	The sum of (a) and (b) below: (a) Return of member contributions with interest, (b) Lump sum payment of one month's salary multiplied by years of service credit, up to a maximum of six months' salary.
	Eligibility:	5 years of membership service
	Benefit:	Either the sum of (a) and (b), or (c) below: (a) Return of member contributions with interest, and (b) Lump sum payment of one month's salary multiplied by years of service credit, up to a maximum of six months' salary, or (c) Actuarial equivalent of the accrued benefit at the time of death of the member.
Termination Benefit	Eligibility:	Prior to 5 years of membership service
	Benefit:	Return of member contributions with interest.
	Eligibility:	5 years of membership service
	Benefit:	Either (a) or (b) below: (a) Return of member contributions with interest, or (b) Actuarial equivalent of the accrued benefit based on a retirement age of 60.
Benefit Adjustments	Eligibility:	Retired members and beneficiaries.
	Benefit:	An annual adjustment (GABA) of 3.0% commencing January 1 st , one year after retirement.
Contributions	Members:	6.90% of members' compensation
	Employers:	6.90% of members' compensation (offset by 0.10% of members' compensation paid by the State for local government and school district employers).

Appendix C

Valuation Data

This valuation is based upon the membership of the System as of June 30, 2006. Membership data were supplied by the System and accepted for valuation purposes without audit. However, tests were performed to ensure that the data are sufficiently accurate for valuation purposes.

Table C-1 contains summaries of the data for contributing members. Values shown in the tables are the numbers of members and their total and average annual salaries.

Active Members	Annual Salaries in Millions	Average Annual Salary
27,962	\$892.8	\$31,930

Table C-2 presents distributions of the following:

- Members receiving service retirement benefits.
- Members receiving disability retirement benefits.
- Survivors of deceased members receiving benefits.
- Terminated vested members.

Type of Annuitant	Number	Annual Benefits in Thousands	Average Annual Benefits
Service Retirement	12,950	\$ 135,979	\$ 10,500
Disability Retirement	795	5,935	7,465
Survivors of Deceased Members	1,909	15,085	7,902
Total Annuitants	15,654	\$ 156,999	\$ 10,029

Terminated Members	Number
Vested Terminated Members	2,530
Non-Vested Terminated Members	7,178
Total Terminated Members	9,708

Appendix D

Glossary

The following definitions are largely excerpts from a list adopted in 1981 by the major actuarial organizations in the United States. In some cases, the definitions have been modified for specific applicability to this System. Defined terms are capitalized throughout this Appendix.

Actuarial Assumptions:	Assumptions as to the occurrence of future events affecting pension costs, such as mortality, withdrawal, disablement, and retirement, changes in compensation, rates of investment earnings and asset appreciation or depreciation, procedures used to determine the Actuarial Value of Assets, and other relevant items.
Actuarial Cost Method:	A procedure for determining the Actuarial Present Value of pension plan benefits and expenses and for developing an actuarially equivalent allocation of such value to time periods, usually in the form of a Normal Cost and an Actuarial Liability.
Actuarial Gain or Loss:	A measure of the difference between actual experience and that expected based upon a set of Actuarial Assumptions during the period between two Actuarial Valuation dates, as determined in accordance with a particular Actuarial Cost Method.
Actuarial Liability:	That portion, as determined by a particular Actuarial Cost method, of the Actuarial Present Value of pension plan benefits and expenses which is not provided for by future Normal Costs.
Actuarial Present Value:	The value of an amount or series of amounts payable or receivable at various times, determined as of a given date by the application of a particular set of Actuarial Assumptions.
Actuarial Surplus:	The excess, if any, of the Actuarial Value of Assets over the Actuarial Liability.
Actuarial Valuation:	The determination, as of a Valuation Date, of the Normal Cost, Actuarial Liability, Actuarial Value of Assets, and related Actuarial Present Values for a retirement plan.

MONTANA PUBLIC EMPLOYEES' RETIREMENT SYSTEM
ACTUARIAL VALUATION AS OF JUNE 30, 2006

Actuarial Value of Assets:	The value of cash, investments and other property belonging to a pension plan, as used by the actuary for the purpose of an Actuarial Valuation.
Actuarial Equivalent:	Of equal Actuarial Present Value, determined as of a given date with each value based on the same set of Actuarial Assumptions.
Entry Age Cost Method:	An actuarial cost method under which the Actuarial Present Value of Projected Benefits of each individual included in an Actuarial Valuation is allocated on a level basis over the earnings of the individual between entry age and assumed exit ages. The portion of this Actuarial Present Value allocated to a valuation year is called the Normal Cost. The portion of this Actuarial Present Value not provided for at a valuation date by the Actuarial Present Value of future Normal Costs is called the Actuarial Liability.
Normal Cost:	The portion of the Actuarial Present Value of Projected Benefits which is allocated to a valuation year by the Actuarial Cost Method.
Unfunded Actuarial Liability:	The excess, if any, of the Actuarial Liability over the Actuarial Value of Assets.
Valuation Date:	June 30, 2006.
