MoDOT & Patrol Employees' Retirement System
Statement of Investment Policy, Objectives and Guidelines
Effective November 18, 2004
Last Revision September 26, 2013

PURPOSE AND OBJECTIVES

The primary objective of the MoDOT & Patrol Employees' Retirement System ("System", "Plan", and "MPERS") is to provide retirement benefits to active and retired employees and their beneficiaries. As part of this charge, the Plan will invest its assets in a diversified portfolio following prudent standards for preservation of capital, with the goal of achieving the highest possible rate of return consistent with the System's tolerance for risk as determined by the Board of Trustees in its role as fiduciary.

Guiding principles:

1. Preserve the long-term corpus of the fund.
2. Maximize total return within prudent risk parameters.
3. Act in the exclusive interest of the members of the system.

Our investment beliefs:

1. Diversification is critical because the future is unknown.
2. Prudent asset management must first focus on understanding and balancing risk.
3. Flexibility in investment policy implementation is critical because various asset classes will be in or out of favor at different points in the economic cycle.

ROLES AND RESPONSIBILITIES

This section addresses the roles and responsibilities of the Board of Trustees, Investment Committee, General Consultant(s), Specialty Consultant(s), Investment Managers, Master Custodian and Actuary as they pertain to the investment of Plan assets. The roles of Executive Director and Chief Investment Officer are addressed in the applicable charters within the System's Governance Policy.

Board of Trustees (Board)

The Board of Trustees is responsible for the general oversight of the investment portfolio, including the review and approval of the policies and procedures contained in this document. The Board establishes the broad asset allocation policies and return objectives of the Plan, and retains investment staff, consultants, a master custodian and other advisors to implement and execute these policies. The Board has established an Investment Committee to support this function.

Pursuant to sections 105.687 to 105.690, RSMo., the Board Trustees are fiduciaries to the System and in fulfilling this responsibility shall:

1. Act with the same care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person acting in a similar capacity and familiar with those matters would use in the conduct of a similar enterprise with similar aims;
2. Act with due regard for the management, reputation, and stability of the issuer and the character of the particular investments being considered;
3. Make investments for the purposes of providing benefits to participants and participants' beneficiaries, and of defraying reasonable expenses of investing the assets of the system;
4. Give appropriate consideration to those facts and circumstances that the investment fiduciary knows or should know are relevant to the particular investment or investment course of action involved, including the role of the investment or investment course of action plays in that portion of the system's investments for which the investment fiduciary has responsibility. For purposes of this subdivision, "appropriate consideration" shall include, but is not necessarily limited to a determination by the investment fiduciary that a particular investment or investment course of action is reasonably designed, as part of the investments of the system, to further the purposes of the system, taking into consideration the risk of loss and the opportunity for gain or other return associated with the investment or investment course of action; and consideration of the following factors as they relate to the investment or investment course of action:
 - a. The diversification of the investments of the system;
 - b. The liquidity and current return of the investments of the system relative to the anticipated cash flow requirements of the system; and
 - c. The projected return of the investments of the system relative to the funding objectives of the system;
5. Give appropriate consideration to investments which would enhance the general welfare of this state and its citizens if those investments offer the safety and rate of return comparable to other investments available to the investment fiduciary at the time the investment decision is made.

In order to improve the efficiency of its investment operations, the Board of Trustees has elected to delegate the implementation of these policy decisions to the Executive Director, Chief Investment Officer, and the appropriate Investment Consultant (either the General Consultant or Specialty Consultant). This decision is supported by Section 104.1069, RSMo., which states: "Trustees of a board may delegate to employees of the system, or to an agent, functions that a prudent trustee acting in a like capacity and familiar with those matters could properly delegate".

Investment Committee

While the Board of Trustees is responsible for the general oversight of the investment portfolio, the investment committee is charged with the responsibility of providing more in-depth analysis on a wide range of investment related issues. The investment committee reviews and/or provides the Board with recommendations on topics such as the organization's tolerance for risk, asset allocation strategies, total fund performance, and compliance with investment policy.

General Consultant(s)

The General Consultant ("Consultant") serves as a fiduciary to the System and works with the CIO to develop and implement the Board's asset allocation strategies and investment policies. The decision to hire, retain, or terminate the Consultant shall be made by the Board of Trustees, with advice from the CIO and Executive Director. The Consultant will attend regular meetings with the Board to both educate and provide an independent perspective on the goals, structure, and performance within the investment portfolio. The Consultant will monitor financial, economic, and political developments that may influence the investment portfolio.

The Consultant must agree in writing to all hiring and termination decisions regarding external asset managers (when a Specialty Consultant is not utilized), and may also assist with the selection of other external service providers.

The Consultant shall provide the Board with a quarterly evaluation of the System's investment performance, detailing the performance by individual manager and asset class, and collectively at the Total Fund level. The quarterly evaluation shall include, but not be limited to, a review of the Investment Manager's performance relative to the appropriate indices and peer groups, and also adherence to its specific style of management (i.e. growth, value, etc.).

Specialty Consultant(s)

Investment in certain investment strategies, such as private equity, hedge funds and real estate, may require specialized knowledge and expertise. The System may employ Specialty Consultants to assist in the development of policies for and implementation of these strategies. Specialty Consultants are expected to assist Staff in developing a greater level of expertise and understanding of their respective asset class. The General Consultant may also be retained as a Specialty Consultant if deemed by the Executive Director and CIO to be in the best interest of the System. In the event the Consultant is also under consideration as the outside service provider, the Consultant will be recused from the selection process and the selection will be made exclusively by the CIO and Executive Director.

The Specialty Consultant must agree in writing to all hiring and termination decisions regarding external asset managers (for funds which they advise).

Investment Managers

Investment managers may serve as fiduciaries for the System, and will have full discretion in the management of assets, subject to the guidelines in their respective

Investment Management Agreement (IMA). Quarterly communications with the Plan are required and these reports will, at a minimum, include:

1. Written statements, including actions taken in the portfolio along with, the current outlook of the portfolio and any expected changes within the portfolio.
2. Comparison of performance results to the performance objectives outlined in their IMA.

MPERS staff should use all means available to encourage Investment Managers to report any pertinent changes in their organization in a timely manner. The changes contemplated by this provision include, but are not limited to, the following:

1. Changes in ownership structure.
2. Changes in key personnel.
3. Changes in process or philosophy, or strategies.
4. Material changes in assets gained or lost, as well as clients gained or lost.
5. Pending litigation or regulatory agency investigation or action.

Master Custodian

The role of the Master Custodian is to accept possession of securities for safekeeping; collect and disburse income; collect principal of sold, matured or called items; provide periodic accounting statements; and process and maintain the securities lending program. However, the securities lending program may be outsourced in part or in whole to one or more third-party lenders.

The Master Custodian will meet as required with the Staff to report on its activities.

Actuary

The Board retains an actuary to maintain appropriate funding of the System. Actuarial services typically include the following:

Annual Services:

- An actuarial valuation of the System's assets and liabilities that:
 1. Measures the System's funding progress
 2. Determines the employer contribution rate for the following fiscal year
 3. Provides actuarial information used for financial reporting purposes
 4. Analyze experience during the year
- Consulting on routine administration by email, phone and/or letter (including benefits calculations, 415 calculations, service purchase calculations and other special calculations;
- Supplemental valuations of proposed system changes, including information necessary for MPERS to complete fiscal notes for the legislature;
- Provide suggestions on ways to improve or maintain financial health of the system;

- Provide projection utility to enable staff to estimate future contribution requirements and funded status based on certain “what if” scenarios;
- Keep Board and staff informed on industry changes; best practices; and changes in standards

Periodic Services

- 5-year experience study: The actuary will perform a formal review of economic and demographic assumptions at least once every 5 years and recommend changes.
- Perform special studies and calculations, as needed
- Provide actuarial tables and factors to staff (or vendor who maintains system software) as needed

Additional Services

The executive director shall periodically retain an independent actuarial firm to perform an actuarial audit in order to evaluate the actuarial firm that is currently providing actuarial services to the board and report the results of that audit to the board at a board meeting held during the first quarter of that year. The executive director may recommend changes to the contract with the actuarial firm that is currently providing actuarial services to the board or the issuance of a request for proposal from additional actuarial firms:

1. Based on the information provided in the actuarial audit report, or
2. Whenever the executive director determines it is appropriate to do so.

DELEGATION OF AUTHORITY

Pursuant to its authority to delegate functions to employees of the system under section 104.1069, RSMo., the Board hereby delegates the responsibility of implementing its Investment Policy and managing the MPERS investment program to the Executive Director, Chief Investment Officer, and relevant Investment Consultant(s). The requirements and limitations of the Executive Director and Chief Investment Officer are addressed in the applicable charters within the System’s Governance Policy.

RETURN OBJECTIVES AND ASSET ALLOCATION

The Board of Trustees, through this investment policy, defines the desired outcome of the investment program. With the assistance of staff and outside service providers, the Board establishes a return objective that is intended to keep contribution rates at a reasonable level and consistent with historical levels, recognizing that changes to the benefit structure or actuarial assumptions will affect contribution rates. The Board will adopt an appropriate assumed rate of return based on market conditions and the Board’s risk tolerance. The Board then establishes an asset allocation policy that is expected to both meet the assumed rate of return while minimizing the impact of the fund’s volatility to contribution rates.

Diversification is the primary risk management tool to minimize volatility within the portfolio. The Board has consciously diversified the Total Fund to ensure that adverse or unexpected results from a single asset class will not have an excessively detrimental impact on the entire portfolio. Diversification is interpreted to include diversification by investment

type, risk and reward characteristics, and by management style (core, value, growth, etc.). Each investment mandate shall also be diversified across holdings and not overly concentrated to any single position.

The current assumed rate of return and asset allocation are listed under Section XII of the Appendix.

MANAGER HIRING AND TERMINATION POLICY

The Board has delegated all investment manager hiring and termination decisions to the CIO and relevant Consultant (either the General or Specialty Consultant), subject to the approval of the Executive Director. In establishing this policy, it is the Board's intent to assure interested parties that actions taken during the process of implementation and maintenance of the program occur in an environment of full disclosure that is characterized by a competitive process, objective evaluation and thorough documentation. The overriding consideration with respect to all decisions is that they are made solely in the best interests of plan participants and beneficiaries.

In the event that a Specialty Consultant is utilized, the General Consultant – while not held accountable for the manager selection process - will provide a high level review of the investment. The review may include, but is not limited to, the overall fit of the strategy within the asset class and amount of the investment relative to the targeted asset allocation.

To assure that all new manager hiring and termination decisions adhere to the Board's intentions, all such actions shall be unanimously agreed to by the Executive Director, Chief Investment Officer and appropriate Consultant. Within 72 hours of the decision, the CIO or Consultant must provide documentation to the Board regarding the decision-making process, expectations, and rationale behind the hiring or termination decision.

Exception for subsequent fund offerings from existing manager relationships: In the event where an investment manager was hired under a previous consulting relationship and the current consulting firm does not have a rating or assessment of the investment manager, the CIO is allowed to invest in subsequent fund offerings of the manager if such subsequent fund offerings are substantially similar in structure, type, and objective as the existing funds in which MPERS has invested with such manager; and as long as the manager has demonstrated strong performance relative to their peer universe. In this case, the General Consultant would review the process utilized by the CIO and verify the performance record of the manager, and the process would still be subject to approval from the Executive Director.

Hiring and/or Termination of External Asset Managers

The Investment Staff and Consultant will take action to hire or terminate external asset managers under one or more of the following circumstances:

- To implement a prudent and diversified manager structure for the portfolio,
- When the need for an assignment type has been identified that will materially improve the diversification and/or risk-return profile of the portfolio,
- To remove one service provider in favor of another, and/or
- When the need arises to eliminate an assignment within the portfolio.

Documentation of the Decision-Making Process

Documentation materials prepared by the Investment Staff and Consultant regarding action to hire or terminate a manager(s) will include a full description of the reason for the action, the expected benefits resulting from the action and a full review of the decision-making process. The primary focus of the Investment Staff and Consultant when preparing documentation regarding the hiring and/or termination of external asset managers will be on providing the Board with the level of information necessary to satisfy all parties that decisions were well reasoned, carefully considered and prudent.

Minimum Criteria for External Asset Managers

In order to receive consideration, an external asset manager must meet certain minimum criteria. In addition to these basic requirements, a manager must also comply with any additional search criteria defined by the CIO and Consultant that have been established for a particular assignment. The minimum criteria for external asset managers are described in the following paragraphs.

Organizational Qualifications. To be selected as an external asset manager, a manager shall meet the following organizational criteria:

- Qualify to serve as a fiduciary to the System if required by the CIO and Consultant for the particular assignment,
- Register with the SEC (if applicable),
- Remain free of conflicts of interest unless previously disclosed and waived, and
- Have a proven record of professionalism and ethical behavior.

Scale. Managers must have a level of assets in the product such that the addition of funds from MPERS will not cause the System's investment to exceed 25 percent of the manager's total assets in the product.

Investment Style and Process. The investment style and process employed by a manager must be compatible with the System's investment objectives and policies. The manager should also have a proven record of adherence to an established investment philosophy over time.

Personnel. A manager must have an experienced professional staff with adequate resources to meet the System's requirements. A manager should be able to demonstrate policies designed to attract and retain key personnel.

Performance. The manager and/or its personnel shall have a demonstrated ability to achieve and maintain superior performance in the investment approach under consideration.

Manager Search Process

External asset managers qualified to fill assignments within the MPERS portfolio are identified through a manager search process. The Investment Staff and relevant Consultant are charged with the responsibility of conducting the necessary searches for qualified service providers. MPERS' investment staff will follow a clearly defined and formal process (typically prepared by the Consultant) that is available to the Executive Director and Board of Trustees for review. The manager search process is intended to provide documentation that all relevant issues have been disclosed, that the search process was conducted fairly, and that the policies and procedures outlined herein were followed to the Board's satisfaction.

Competitive Environment. The search for external asset managers will be conducted in an open environment to ensure that qualified providers are identified, the process is fair and objective, and that pricing is reasonable. In instances where multiple providers exist, a meaningful sample of qualified firms should be considered and evaluated in relationship to each other. If a situation arises in which an investment approach is unique to a specific firm, a full description of the unique characteristics of the firm and the reasons why a competitive alternative does not exist must be fully documented.

Manager Selection Criteria. The Investment Staff and Consultant will jointly develop the manager selection criteria used to identify potential service providers. In order to identify the most qualified service providers, criteria will be tailored to each specific assignment within the portfolios. The Investment Staff and Consultant will independently apply the criteria to the manager universe to ensure fairness and consistency including due consideration of minority and women service providers (pursuant to Section 104.621, RSMo.).

Requests for Proposals. Broadly distributed Requests for Proposals (RFPs) developed by the Investment Staff and Consultant are not required. RFPs may be sent to qualified service providers as determined by the CIO and General Consultant. In these cases, the Investment Staff and Consultant will independently assess and rank the RFP respondents based on a set of established criteria.

Due Diligence. The investment management firms receiving the highest rankings by the Investment Staff and Consultant will be subjected to an intensive due diligence effort. The Investment Staff and Consultant participate jointly in this process. Both parties conduct a number of quantitative and qualitative analyses on firms under consideration. Once "finalist" firms are determined, an on-site meeting will be held with each manager under consideration.

Manager Selection and Search Process Documentation. The manager receiving the highest collective ranking from the search team is selected to fill the designated assignment within the portfolios. The Investment Staff and Consultant are responsible for the preparation of all search process documentation, and for providing the documentation to the Board, if requested.

Investment Management Agreements

Where appropriate, an investment management agreement (IMA) will be executed for each external asset manager, establishing guidelines for the particular role of that manager within the overall portfolio. The IMA, at a minimum, will address the following topics:

- a. Permissible investments,
- b. Style adherence,
- c. Diversification,
- d. Portfolio quality,
- e. Performance objectives, and
- f. Other manager-specific issues.

To the extent the manager relationship is governed by a limited partnership agreement, group trust agreement or the guidelines of a commingled investment vehicle, the prospectuses, offering documents, private placement memorandums and other governing documents for those investments will be reviewed carefully by legal counsel and Investment Staff. Upon execution, the documents will govern those relationships and the terms of which shall be incorporated by reference into the System's Investment Policy.

Management Fees

The Investment Staff and Consultant are responsible for securing the services of qualified service providers at reasonable and competitive fee structures, and will work diligently to assure the most favorable fee arrangements for the System. In accordance with that policy, the Investment Staff and Consultant will consider a number of different fee structures. Both asset-based and performance-based fee alternatives will be considered. All performance-based fee structures, however, will be carefully compared and contrasted to traditional asset-based fee options.

Ongoing Manager Evaluation

The Investment Staff and Consultant are responsible for the monitoring and evaluation of the external asset managers employed by the System as part of the program. In fulfilling this role, Staff meets at least annually with each manager to formally review performance and investment activity, as well as to ensure each firm is adhering to the specific investment guidelines established for each mandate.

REVIEW PROCESS

In view of the rapid changes within the capital markets and investment management techniques; this Investment Policy will be reviewed as needed by the Plan. Any revision to the policies and procedures set forth herein requires the approval of the Board of Trustees.

APPENDIX

Section I – Proxy Voting Policy

Proxy voting shall be the responsibility of the investment manager and shall be done with the best interests of the Plan participants in mind. Managers shall maintain records of proxy votes and shall report this record annually to the Plan. Proxy voting and related procedures adopted by a manager or other service provider to the Plan shall be in compliance with applicable Missouri and federal laws and regulations. Additional information regarding proxy voting policies, and/or specific proxy initiatives may be requested by the Plan.

Section II – Securities Lending Policy

The Plan may elect to participate in a securities lending program that shall be implemented through the Plan's custodian or through a designated third party securities lending agent. Participation in such program shall continue until the Executive Director, Chief Investment Officer and Investment Consultant agree that the risk-reward relationship is no longer advantageous for Plan. If and when this determination is made the Plan may discontinue participating in any securities lending programs that are currently in place. This shall be done without Board approval. The Board shall be notified at the next Board meeting that participation in the program(s) has been ceased. Notification will also occur if and when the Plan decides to reinstate participation in such a program.

Participation in any securities lending program shall in no way inhibit the investment strategy or process of any investment manager. The program shall only take reasonable risks with respect to securities on loan, levels of collateral collected and investment of collateral proceeds. Any securities on loan shall be marked-to-market on a daily basis to ensure adequacy of collateral. The sponsor of the securities lending program shall provide an annual report to the Plan.

Section III – Securities Class Action Litigation Policy

It is the policy of this Plan not to serve as lead plaintiff in a class action litigation case unless the Plan is one of the largest shareholders of the security in question, and it is determined through consultation with legal counsel that serving in this status would be in the best interests of the Plan. Cases that present such an opportunity will be reviewed as they arise and determination on how to proceed will be outlined at that time.

The custodian will have primary responsibility for monitoring shareholder litigation settled in U.S. District Courts on behalf of the System. The custodian will notify the System when litigation has been settled that effects a security either currently owned, or previously owned while the custodial arrangement was in effect. Information regarding any class action settlements will be sent to Investment staff and the General Counsel will be notified. If participation is elected by the System, the custodian will be responsible for submitting documentation so that the System may participate in any settlement distributions. Any distributions received by the custodian on behalf of the System shall be deposited into the System's cash account unless otherwise directed by the System.

Section IV – Deposit and Investment Risk Policies

Concentration of Credit Risk

Concentration of credit risk is the risk of loss attributed to the magnitude of the System's investment in a single issuer. Within the traditional asset classes (equities and fixed income), the consultant will aggregate exposures across asset classes to create measures of concentration including industries, countries and security issuer for Investment staff review.

Investment Custodial Credit Risk

Custodial credit risk is an investment risk in that, in the event of the failure of the counterparty to a transaction, the System will not be able to recover the value of its investment or the collateral securities that are in the possession of an outside party. Investment securities are exposed to custodial credit risk if the securities are uninsured, are not registered in the name of the System, and are held by either: a) the counterparty or b) the counterparty's trust department or agent but not in the System's name. It is the policy of the System to require that all investments be clearly marked as to ownership and, to the extent possible, shall be registered in the name of the System.

Cash Deposit Custodial Credit Risk

Cash deposit custodial credit risk is the risk that, in the event of the failure of depository financial institution, the System will not be able to recover deposits or will not be able to recover collateral securities that are in the possession of an outside party. Missouri state law requires that all public funds must be collateralized with acceptable securities having market values of at least 100% of the amount of funds on deposit (less any amount covered by FDIC insurance).

Interest Rate Risk

Interest rate risk is the risk that changes in interest rates will adversely affect the fair value of an investment. The System does not have a formal investment policy that limits investment maturities as a means of managing its exposure to interest rates. Interest rate risk is most prevalent within the fixed income allocation, where the Board of Trustees has set a target allocation equal to 25% of System assets.

Investment Credit Risk

Investment credit risk is the risk that an issuer or other counterparty to an investment will not fulfill its obligations. Unless authorized under a separate Investment Management Agreement, it is the policy of the System to limit fixed income managers to purchasing securities that possess a minimum credit rating of "Baa" by Moody's and "BBB" by Standard & Poor's. Issues subsequently downgraded below these ratings must be brought to the attention of the Chief Investment Officer for review.

Foreign Currency Risk

Foreign currency risk is the risk that changes in exchange rates will adversely affect the fair value of an investment. The System is subjected to foreign currency risk through its exposure to investments that are denominated in a foreign currency. While a certain amount of this exposure is desired for diversification purposes, the System's investment policy does allow its managers to utilize currency futures for defensive (hedging) purposes if deemed to be in the best interest of the System.

Section V – Anti-Terrorism Investment Policy

On an annual basis, MPERS' Staff will research available information from governmental agencies regarding companies that are believed to be supporting terrorism. Such organizations include the Department of Homeland Security, the State Department, the Commerce Department, the Justice Department, the Treasury Department, the Securities and Exchange Commission, and any other governmental agency deemed to have useful information in accurately identifying companies that are supporting terrorism. MPERS' Staff will also research any specific information available from the Missouri State Treasurer's Office and the Office of the State Attorney General in identifying these companies.

Upon receipt of such information, Staff will compare the list of companies with current holdings. In the event that MPERS is a holder of one of these companies, Staff will immediately contact the manager of the specific investment account to bring the situation to their attention and discuss appropriate actions for divesting from the company. In addition, Staff will forward on all information received from any of these governmental agencies to our investment managers so they can avoid making initial investments or divest of existing investments in companies that are identified as supporting terrorist activities. Finally, if MPERS is determined to be a holder of any company with links to terrorist activities, Staff will provide a report to the Board on an annual basis that identifies any investment actions taken.

This policy is intended to avoid 1) punishing companies whose activities abroad are supported by the US government; 2) punishing companies whose activities abroad do not further terrorism, 3) unnecessarily harming US companies and jobs; and 4) compromising the Board's fiduciary duties to the beneficiaries of the System. Recognizing the dynamic nature of this issue, Staff will annually evaluate this policy to determine if changes need to be made to reflect recent developments in this area. In the event that Staff believes changes to this policy are warranted, they will bring the issue to the attention of the Board for consideration.

Section VI – Conduct and Conflict of Interest

MPERS has adopted a Board Governance Policy and a Personnel Policy strictly addressing conduct and conflicts of interest. Implementation of the Investment Policy is, and must be, in compliance with all other applicable policies adopted by MPERS. Managers and other service providers engaged under the Investment Policy shall comply with applicable laws and regulations regarding conduct and conflict of interest, and particularly related to gifts, contributions, or other payments for purposes of influencing the decisions or actions of public officials and employees affecting MPERS and the board and staff of MPERS. This

should take into account prohibitions applicable to "pay-to-play" activities. Any board member, staff member, manager or other service provider becoming aware of improper conduct or activity that may suggest improper conduct shall report the same to MPERS' Executive Director or General Counsel.

Section VII – Placement Agent Fees

Placement agents are defined as any person or entity hired, engaged or retained by an external manager as a finder, solicitor, marketer, consultant, broker or any other intermediary to raise money from or to obtain access to MPERS' investment portfolio. Typically placement agents are retained by investment firms to perform services such as designing marketing materials and/or making introductions to investment prospects (including pension funds). The agents are typically paid by the external manager or investment manager that hires them.

Placement fees are legal, but the disclosure of placement fees is required to protect against actual or potential conflicts of interest. Problems can arise if the pension officials receive undisclosed and/or inappropriate payments or other benefits from the placement agent that influence the decision making process of the pension system. Such conduct could be illegal and would likely present a breach of fiduciary duty.

Commencing October 1, 2010 Investment Staff shall ask that each service provider provide the information below to staff prior to contract signing.

1. A statement whether the external manager, or any of their principals, employees, agent or affiliates has compensated or agreed to compensate any person or entity to act as a placement agent in connection with any investment by MPERS.
2. A description of any and all compensation of any kind provided or agreed to be provided to a placement agent, including the nature, timing, value, and the entity making the compensation payment.
3. A statement whether the placement agent, or any of its affiliates is registered as a lobbyist with any state or national government.

Section VIII – Internal Fixed Income Policy

Statement of Purpose

Effective June 20, 2013, MPERS' Board of Trustees approved new asset allocation targets for MPERS' investment portfolio. The fixed income portfolio has a new targeted allocation to core, long duration securities and inflation protected securities. Staff was granted approval to manage these allocations internally if deemed to be the most effective means of obtaining the exposure. Should the Chief Investment Officer (CIO) decide to internally manage a portion of MPERS' fixed income portfolio, this internal fixed income policy outlines the goals, objectives, and limitations that govern the program.

Goals and Objectives

MPERS' Board of Trustees has established asset allocation targets to core, long duration and inflation protected fixed income securities, as defined below:

Inflation Protected Securities: Fixed income securities that offer a stated real rate of return, plus a par value that rises with inflation (as measured by the Consumer Price Index for U.S. Treasury inflation protected securities).

Benchmark: Barclays Capital U.S. TIPS Index

Duration Target: +/- 25% of the benchmark duration

Maximum exposure to one issue: No restrictions on U.S. Treasury and government agency securities, or securities fully guaranteed by a U.S. government agency. Exposure to the Barclays Capital World Government Inflation-Linked Bond Index (WGLIB) is limited to 20% of the market value of the Inflation Protection portfolio.

Acceptable investments:

- U.S. Treasury Inflation Protected Securities (TIPS)
- U.S. Government Agency Securities, or securities fully guaranteed by a U.S. Government agency, where the coupon or total Return is derived from an inflation-linked index (such as the Consumer Price Index).
- Exposure to the Barclays Capital World Government Inflation-Linked Bond Index (WGLIB). Markets included in the index are the UK, Australia, Canada, Sweden, the U.S., France, Italy, Japan and Germany. Minimum rating for inclusion in the index is A3/A- for G7 countries and euro area markets and Aa3/AA- otherwise.

Long Duration Securities: Fixed income securities with longer term maturities, designed to generate income and provide a hedge against falling interest-rate environments.

Benchmark: Barclays Long Duration U.S. Government Credit Index

Duration Target: +/- 25% of the benchmark duration

Maximum exposure to one issue: No restrictions on U.S. Treasury and government agency securities or securities fully guaranteed by a U.S. government agency. Non-government agency positions are limited to 5% of the market value of the Long Duration portfolio.

Acceptable investments:

- U.S. Treasury securities
- U.S. Treasury Futures contracts
- U.S. Government Agency securities, or securities fully guaranteed by a U.S. government agency
- Mortgage and other asset backed securities with minimum AAA credit rating by Standard & Poors, Moody's Investors, or Fitch at time of purchase or transfer.
- Corporate bonds with minimum AA credit rating (AA- by Standard & Poors or Aa3 by Moody's Investors) at time of purchase or transfer.
- Municipal bonds with minimum AA credit rating (AA- by Standard & Poors or Aa3 by Moody's Investors) at time of purchase or transfer.

Core Fixed Income Securities: Fixed income securities with short to intermediate term maturities, designed to generate a stable income with less interest rate risk relative to long duration securities.

Benchmark: Barclays U.S. Government Credit Index

Duration target: +/- 25% of the benchmark duration

Maximum exposure to one issue: No restrictions on U.S. Treasury and Government Agency securities, or securities fully guaranteed by a U.S. Government Agency. Non-government agency positions are limited to 5% of the market value of the Core Fixed Income portfolio.

Acceptable investments:

- U.S. Treasury securities
- U.S. Treasury bond Futures contracts
- U.S. Government Agency securities, or securities fully guaranteed by a U.S. Government Agency
- Mortgage backed securities or asset backed securities with minimum AAA credit rating by Standard & Poors, Moody's Investors, or Fitch at the time of purchase or transfer.
- Corporate bonds with minimum AA credit rating (AA- by Standard & Poors or Aa3 by Moody's Investors) at time of purchase or transfer.
- Municipal bonds with minimum AA credit rating (AA- by Standard & Poors or Aa3 by Moody's Investors) at time of purchase or transfer.

Cash collateral guidelines (when total return swaps are utilized):

In the event the CIO utilizes total return swaps to obtain exposure to a fixed income market (authorized in MPERS' broad investment policy), the underlying cash collateral shall be of equal or higher quality to the acceptable investments in the core and long duration fixed income sections. Securities held for cash collateral shall also have an expected maturity (final maturity, expected call, or average life) that is before the expiration of the swap, or have a floating rate coupon that resets prior to the expiration of the swap.

Downgrade procedure (subsequent to purchase):

In the event an individual security is downgraded below the minimum credit rating criteria, the CIO has a period of six months to review the security and either; a) liquidate the holding or b) provide to the Investment Committee a rationale for continuing to hold the security and obtain their approval..

Trade Documentation:

MPERS' staff is responsible for broker selection and insuring that transactions are executed at competitive pricing and execution. MPERS's staff must provide documentation for each trade made for the internal fixed income portfolio. The documentation will be attached to the trade authorization form(s) sent or used by the master custodian, and must include (at a minimum) the following:

- Description of security purchased
- Settlement costs of trade
- Investment yield of security
- Yield of competing bids or similar investments
- Brief rationale of trade/investment

Performance Reporting:

Each internally managed fixed income accounts shall have a separate account established at the master custodian for safekeeping and reporting purposes. The performance of each account shall be calculated by the master custodian, included as a component to MPERS' overall fixed income portfolio, and reported in the same manner as an externally managed portfolio.

Compliance / Auditing:

MPERS' general investment consultant will review the internally managed fixed income accounts no less than semi-annually to ensure compliance with this policy. The review will include, at a minimum, a review of holdings and purchases during the period to ensure the securities meet the eligibility requirements and goals of the program. This review will be presented to the Investment Committee for its approval

Section IX – Liquidity Review

The CIO shall periodically conduct a liquidity study to analyze the current profile of contributions and benefit payments relative to the current liquidity profile of the portfolio. The liquidity analysis should model several market environments, including stressed scenarios, to test how the investment program would respond under various market conditions. The liquidity analysis is a useful tool in assessing how much of the portfolio can be allocated to illiquid investments before having a negative impact on the portfolio's ability to meet current and future liability obligations.

Section X – Asset/Liability Study

The CIO, with the assistance of the General Consultant and actuary, shall perform an asset/liability study at least every 5 years and report the results of the study to the Board of Trustees. Modeling an investment portfolio against the system's liability structure enables the Board to see how various asset allocations impact the system's ability to meet its' projected cash flow needs. The study will establish expected growth rates for each asset class based on the expected return and standard deviation of the asset class. The various asset mixes (and resulting cash flows) are then compared against the expected growth rate of the system's liabilities, using projected interest and inflation rates. The product of an asset/liability study is the identification of investment portfolios that are most likely to meet the system's expected future spending needs while minimizing the risk that those needs will not be met.

Section XI – Economic or Socially Targeted Investments

The system will not make investments that are economically or socially targeted (ETIs or STIs). For purposes of definition, ETIs or STIs are investments that are selected for the economic and social benefits they create in addition to the investment return to the employee benefit plan investor. The following criteria, applicable to any investment, will also be applied to investments that might be classified as ETIs or STIs:

- The fiduciary principles of prudence and exclusive interest of participants will not be abrogated or modified in order to increase the attractiveness of ETIs or STIs.
- There will be no concession on rate of return. This means there will be no

hidden subsidies and that the classic "efficient frontier" test is applicable: a commensurate unit of return will be received for each unit of risk incurred.

- All participation should be voluntary on the part of the System and should not stem from a legal or policy mandate.
- Each ETI or STI will be evaluated using an integral, objective process -- that is, each will be meticulously analyzed solely on its own risk/return characteristics. No weight will be given to redeeming social interests.
- The System will participate only if at least one other comparable investor is participating.
- When evaluating an investment, appropriate consideration must be given to the role that the investment or investment course of action plays (in terms of diversification, liquidity, risk and return) with respect to the entire investment portfolio of the System. Consideration should also be given to alternative investments with similar risks available to the System. The Board believes this set of investment criteria is in full compliance with Section 105.688. RSMo.

Section XII – Assumed Rate of Return & Asset Allocation

The current assumed rate of return of 7.75% was adopted by The Board on June 20, 2013. The Board has also adopted the following broad asset allocation targets for Plan assets effective October 1, 2012. The Board has granted the CIO the authority for establishing the allocation to each manager within the sub-asset classes. Based on a variety of considerations, the Board has established a range of allocations to sub-asset classes from which the CIO can operate. These ranges are outlined in the table that follows. The CIO shall adhere to the following guidelines when determining the dollar allocations to the managers:

- Changes to the manager allocations shall be based on longer-term expectations and should not be guided by short-term fluctuations in the capital markets,
- A prudent level of style and process diversification shall be maintained at all times, and any changes in the allocations to managers should be completed in a cost efficient manner, utilizing “natural” cash flows to the extent possible.

When the use of passive investment strategies is desired, the CIO is responsible for determining the most effective method of obtaining the exposure.

Asset Class	Sub-Asset Class Ranges	Policy Benchmark Weight	Policy Benchmark Index
GLOBAL EQUITY	25% - 35%	30%	MSCI ACWI Index
FIXED INCOME	20% - 30%	25%	Barclays Universal Index
Core	5% - 15%	10%	Barclays Govt. / Credit Index
Inflation Protected Securities (TIPS)	0% - 10%	5%	Barclays U.S. TIPS Index
Long Duration	0% - 10%	5%	Barclays U.S. Long Govt.
Opportunistic Debt	0 - 10%	5%	Barclays U.S. Corp. High Yield
ALTERNATIVES	35% - 50%	45%	
Private Equity	10% - 20%	15%	S&P500 + 3%

Hedge Funds ¹	10% - 20%	15%	HFRI Fund of Funds
Real Estate	5% - 15%	10%	NFI-ODCE
Real Assets	0% - 10%	5%	CPI + 4%

The following are brief descriptions of the asset and sub-asset classes and the underlying philosophies currently utilized by the System.

APPROVED ASSET CLASSES AND STRATEGIES – TRADITIONAL INVESTMENTS

Global Equity: Publicly traded stocks from both developed and emerging markets around the world, diversified by capitalization, style, sector, company, country and currency. Strategies and/or managers will generally invest in markets and securities contained within the MSCI All Country World Index (ACWI). Equities seek to provide a combination of long-term capital appreciation and dividend income that in aggregate is expected to exceed the rate of inflation.

Fixed Income: The fixed income portfolio is constructed with a number of unique, diversified strategies to provide a prudent risk and return profile within the asset class. Permissible fixed income strategies include:

Core Strategies: Fixed income managers and strategies that invest across the various debt instruments contained within the Barclays Capital Universal Index. The system may utilize strategies that either invest across the spectrum of securities in the Index, or that specialize in certain sectors or security types.

Opportunistic Debt Strategies: Managers and strategies that seek to take advantage of relative value opportunities across the global fixed income markets, often times investing in sectors in need of liquidity. Such strategies may include, among others: high yield bonds; mezzanine debt; commercial and residential mortgage backed securities; and distressed corporate debt. Exposure may be obtained through long-only mandates or through private equity and hedge fund structures (explained further in the non-traditional investments section).

Inflation Protected Securities: Fixed Income securities that offer a stated real rate of return, plus a par value that rises with inflation (as measured by the Consumer Price Index).

Long Duration Securities: Fixed income securities with longer term maturities, designed to generate income and provide a hedge against falling interest-rate environments.

¹ To provide additional perspective on the long term success of the program, Hedge Fund performance will also be measured against a T-Bills + 4% hurdle over 5-7yr. rolling return periods.

APPROVED ASSET CLASSES AND STRATEGIES – NON-TRADITIONAL INVESTMENTS

Private Equity: Private Equity investments include buyouts, venture capital, debt-related (primarily mezzanine finance and distressed debt), or other opportunities that do not fit into traditional asset classes.

The portfolio will be diversified across investment stage, manager style, sectors and geographic coverage. MPERS will take a measured approach to obtaining exposure with the asset class, making annual allocations in lieu of large, one-time commitments to provide further diversification across vintage years. The actual portfolio will be built on a case by case evaluation of best available opportunities, maintaining these overall diversification guidelines.

Exposure to the Private Equity sub-asset classes may be achieved by investing with fund-of-funds managers and/or through direct partnerships. In establishing the Private Equity portfolio, a strategy of over-commitment to the asset class may be utilized in order to reach and maintain the target allocations.

Hedge Funds: These strategies utilize a broad range of investment management techniques to achieve a consistent positive return regardless of overall market conditions. Examples of Hedge Fund strategies include, but are not limited to, long/short equity, relative value, event-driven and directional strategies. Exposure to Hedge Fund Strategies and their sub-asset classes may be achieved by investing with fund-of-funds managers and/or through direct partnerships.

Hedge Fund strategies may be used as a stand-alone asset class (i.e., as a tactical allocation in lieu of traditional fixed income) or as part of a Portable Alpha strategy with other traditional asset classes. Utilized in a Portable Alpha context, the return streams of the Hedge Fund managers are designed to provide an alpha overlay (excess return) above the returns of an underlying asset class, or beta. In this structure, exposure to the underlying asset class is obtained synthetically, through the use of futures and/or swaps.

Real Estate: Real Estate strategies may include, but are not limited to, diversified core, value-added, and opportunistic strategies, along with other special situations. Core real estate strategies include high quality office, multi-family housing, industrial and retail properties where the majority of the total return is derived from the rental income from the properties. Value added and opportunistic strategies typically include properties purchased with the intention of implementing a business plan to improve the attractiveness of the property and enhance return. This could include, among other strategies, certain modification or development to the property (or surrounding areas) and various lease-up activities. In the case of value-added and opportunistic mandates, a strategy of over-committing to the asset class may be utilized in order to reach and maintain the target allocation. Exposure to real estate strategies may be achieved through publicly traded debt or equity instruments, or through private limited partnership vehicles.

Apart from its administrative offices, and absent specific Board action or authorization, the System will not itself invest directly in Real Estate.

Real Assets: Real asset strategies are investments that are ultimately backed by a tangible, physical asset. The backing of a hard asset offers a level of downside protection, inflation protection and diversification that is not present with traditional assets (such as stocks and bonds). Permissible strategies include commodities, along with private investments into energy, infrastructure, farmland, timber, and metals & mining strategies (discussed in more detail below).

Commodities are foods, metals, and other raw materials that investors trade in the marketplace. Commodities are typically used as inputs in the production of other goods or services, and are interchangeable with other commodities of the same type. The quality of a commodity may differ slightly, but it is essentially uniform across producers. Examples include, but are not limited to, grains, metals, livestock, oil, cotton, coffee, sugar, and cocoa. Commodities are often used to enhance the risk/return profile of the investment portfolio, as they offer protection against inflation and low correlations to traditional equity markets. Exposure can be obtained by investing directly in the cash or futures markets, or by investing in a commingled fund or separate account structure with an approved investment manager.

Various private investment structures may also be utilized to provide additional diversification benefits to the real assets portfolio. Permissible private investment strategies include, but are not limited to, energy, infrastructure, farmland, timber, and metals & mining offerings. Energy investments include power generation facilities along with strategies focused on the drilling, transportation, storage and distribution of energy resources (referred to as upstream, midstream, and downstream strategies). Timber and farmland investments include strategies whereby the majority of the returns are derived from the biological growth of the product grown on the land, and with the respective market price of the product. Infrastructure investments include roads, bridges, water and sewer systems, and other services or utilities that support the economy and society. Metals & mining strategies focus on the development and production of basic metals (copper, zinc, iron ore) and precious metals (gold, silver, platinum).

Exposure to private real asset strategies may be achieved by investing in commingled funds, a separate account structure with an approved investment manager, or through a private limited partnership vehicle.

Investments that overlap asset class boundaries: Certain alternative investment strategies will have characteristics of more than one asset class. For example, a real estate or private debt offering could be structured in a way that more closely resembles an equity product, while an equity infrastructure fund can be structured with fixed income attributes. In these situations, the CIO will look to the volatility of the underlying strategy to determine the appropriate asset class for the investment. As examples, higher volatility strategies (possessing equity-like volatility) are more appropriate for the real estate or private equity allocations, while lower volatility strategies are more appropriate for the fixed income and absolute return portfolios.
