Actuarial Certification

As the actuary for the New York State and Local Employees' Retirement System (ERS), the New York State and Local Police and Fire Retirement System (PFRS) and the Group Life Insurance Plan (GLIP), known collectively as the "System", it is my job to ensure that the System is properly funded. The System uses the aggregate funding method which has a funding objective of employer contributions that, over time, are a level percentage of payroll. Every April 1st we perform an actuarial valuation which determines employer contributions for the next succeeding fiscal year. In preparation for the valuation, we extensively validate the System's data by running reasonableness tests and account for every individual on a year-to-year basis. Also, we review the information contained in the financial statements.

We set all of the actuarial assumptions using the System's data. We have a five year cycle where we update all of our assumptions. We do perform annual experience studies, ascertaining how closely the System's experience is conforming to the assumptions used. While we normally do not make significant changes in these assumptions on a year-to-year basis, if significant differences occur that we believe may indicate permanent shifts, we will make changes outside of the five year cycle.

The System retains an external auditor to independently review its financial records every year. Furthermore, an Actuarial Advisory Committee meets annually to review the actuarial assumptions and the results of the actuarial valuation. The System also engages the services of an outside actuarial consultant to perform a review every five years. Similarly, every five years, the System is audited by the New York State Department of Insurance. Lastly, the State Comptroller, in his role as sole trustee of the System, established an Office of Internal Audit to help fulfill his fiduciary duties and these auditors periodically review our processing.

I hereby certify that, to the best of my knowledge and belief, this valuation is complete and accurate and fully discloses the funded condition of the System, as of April 1, 2013. This valuation was prepared in accordance with generally recognized and accepted actuarial practices which are consistent with the principles prescribed by the Actuarial Standards Board as well as the Code of Professional Conduct and Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion of the American Academy of Actuaries of which I am a member. In addition, our assumptions and methods meet the parameters set for disclosures by Governmental Accounting Standards Board (GASB) Statements No. 25 and 50.

2) Calculated System Percentages & Gains

Employee contributions are collected roughly evenly throughout the year. Employer contributions are primarily collected on 12/15, 2/1, and 3/1.

An average contribution date of 2/1 is assumed (2 months before fiscal year end).

Deductions are paid roughly evenly throughout the year.

An average deduction date of 10/1 is assumed (6 months before fiscal year end).

A system's % of assets for each year is applied to the unexpected gain (UG) for that year.

BILLABLE MEMBERS AND THEIR COMPENSATION

Projected compensation equals the compensation for 3/31/14 attributable to the members on roll as of 3/31/13, discounted to 4/1/13. It is the present value of the expected lag year billing salary for the valuation cohort.

Note: Projected comp is not calculated for a record where the member's age is above omega, therefore there can be a count of members, but \$0 projected comp when all member ages are above omega.

Present value projected compensation is for the total expected billing compensation (including the lag year).

Billable Members and their Compensation

Projected compensation equals the compensation for 3/31/14 attributable to the members on roll as of 3/31/13, discounted to 4/1/13. It is the present value of the expected lag year billing salary for the valuation cohort.

Note: Projected comp is not calculated for a record where the member's age is above omega, therefore there can be a count of members, but \$0 projected comp when all member ages are above omega.

Present value projected compensation is for the total expected billing compensation (including the lag year).
