THE PUBLIC SCHOOL EMPLOYEES' RETIREMENT SYSTEM OF PENNSYLVANIA

## ACTUARIAL VALUATION

JUNE 30, 2010

January 31, 2011

The Retirement Board
Public School Employees’
Retirement System of Pennsylvania
P.O. Box 125

Harrisburg, Pennsylvania 17108
Ladies and Gentlemen:
This report presents the results of the annual actuarial valuation of the Public School Employees' Retirement System of Pennsylvania (Retirement System or PSERS) as of June 30, 2010.

The valuation takes into account all of the promised benefits to which members are entitled as of June 30, 2010, including pension and survivor benefits, and as required by the Public School Employees’ Retirement Code, 24 Pa. C.S. §8101 et. seq. (Retirement Code) is the basis for the contribution rate for fiscal year 2011/2012.

The valuation was based on the actuarial assumptions and methods as adopted by the Board of Trustees. As adopted by the Board of Trustees at their January 2009 meeting, the valuation interest rate was changed to $8.25 \%$ for the June 30,2008 valuation and to $8.00 \%$ for all future valuation years.

The actuarial assumptions and methods for financial reporting meet the parameters set forth in Governmental Accounting Standards Board (GASB) Statements No. 25, 43, and 50, and are unchanged from the prior valuation. The actuarial assumptions and methods for GASB 25 disclosure are the same as for pension funding, except that the GASB 25 amortization payment will be determined based on 30-year level-dollar funding. The Health Insurance funding provisions of the Retirement Code differ from the GASB 43 disclosure retirements. For funding purposes the actuarial liability equals the assets in the health insurance account, and a contribution is determined that will assure the solvency of the account through the third fiscal year following the valuation date. For purposes of GASB 43 disclosure the Health Insurance actuarial liability and normal cost requirements have been determined under the entry age actuarial cost method, with 30-year level dollar funding. (The entry age actuarial cost method meets the GASB 43 parameters for determining actuarial liability and normal cost, and is the cost method specified by the Retirement Code for the PSERS pension plan.)

## Assets and Membership Data

The Retirement System reported the individual data for members of the Retirement System as of the valuation date to the actuary. While we did not verify the data at their source, we did perform tests for internal consistency and reasonableness. The amount of assets in the trust fund taken into account in the valuation was based on statements prepared for us by the Retirement System.

## Funding Adequacy

The valuation results determine that the employer contribution rate for fiscal year 2011/2012 is $8.65 \%$. As of June 30, 2010, the total funded ratio of the plan (for Pensions and Health Insurance combined) is $75.1 \%$, based on the accrued liability and actuarial value of assets calculated under the funding requirements of Section 8328 of the Retirement Code.

## Financial Results and Membership Data

Detailed summaries of the financial results of the valuation and membership data used in preparing the valuation are shown in the valuation report. The actuary prepared supporting schedules included in the Actuarial and Statistical Section of the PSERS Comprehensive Annual Financial Report (CAFR), and also prepared the trend data schedules included in the Financial Section of the CAFR.

The report does not take into account any changes in U.S. equity prices and bond yields that have occurred after the valuation date. Taking these into account may significantly change the market and actuarial value of assets shown. The effect of these events on any funded ratios shown, and on Retirement System calculations, is not known. Retirement System funding and financial accounting rules generally prohibit reflection of changes in assets and underlying economic conditions that occur after the valuation date.

Qualified actuaries completed the valuation in accordance with accepted actuarial procedures as prescribed by the Actuarial Standards Board. The qualified actuaries are members of the American Academy of Actuaries and are experienced in performing actuarial valuations of public employee retirement systems. To the best of our knowledge, this report is complete and accurate and has been prepared in accordance with generally accepted actuarial principles and practice.

Respectfully submitted,

Dana Spangher, FSA, MAAA, EA Principal, Consulting Actuary

Janet H. Cranna, FSA, MAAA, EA Principal, Consulting Actuary

Edward Quinn, MAAA, EA Director, Retirement Actuary

## Executive Summary

This report presents the actuarial valuation as of June 30, 2010 for the Public School Employees' Retirement System of Pennsylvania.

The principal valuation results include:

- The employer contribution rate for fiscal year 2011/2012, which is $8.65 \%$.
- The total funded ratio of the plan determined as of June 30, 2010 under the funding requirements of Section 8328 of the Retirement Code, which is $75.1 \%$ based on the accrued liability and the actuarial value of assets for Pensions and Health Insurance as of that date.
- The determination of the actuarial experience as of June 30, 2010, which is a loss of $\$ 3.467$ billion.
- Annual disclosures as of June 30, 2010 as required by Statements No. 25, 43, and 50 of the Governmental Accounting Standards Board.

The valuation was completed based upon membership and financial data submitted by the Retirement System. Detailed summaries of the financial results of the valuation and membership data used in preparing the valuation are included in the valuation report. The actuary prepared supporting schedules included in the Actuarial and Statistical Section of the PSERS Comprehensive Annual Financial Report (CAFR), and also prepared the trend data schedules included in the Financial Section of the CAFR.

## Changes Since Last Year

## Legislative and Administrative Changes

The valuation was completed based upon the following legislative changes:

- The valuation reflects Act 2010-46 (Act 46). Act 46 directed the Public School Employees' Retirement Board to recertify the employer contribution rate for the Fiscal Year which ends June 30, 2011 from $8.22 \%$ to $5.64 \%$, with $5 \%$ consisting of the pension component of the rate and $.64 \%$ consisting of the premium assistance component of the rate.
- The valuation also reflects the following benefit and funding reform provisions of Act 2010120 (Act 120):
a. Benefit reforms:

1. Establish a new class of membership ("Class T-E"). Any employee who becomes a member of the Retirement System after June 30, 2011 would become a Class TE member. A Class T-E member would be eligible for an annuity based upon an annual benefit accrual rate of $2 \%$ and would have a corresponding employee contribution requirement equal to $7.5 \%$ of compensation;
2. Establish an optional new class of membership ("Class T-F"). Any employee who becomes a member of the Retirement System after June 30, 2011 would have the option of electing Class T-F membership within 45 days of becoming a member. A Class T-F member would be eligible for an annuity based upon an annual benefit accrual rate of $2.5 \%$ and would have a corresponding employee contribution requirement equal to $10.3 \%$ of compensation;
3. Increase the superannuation requirements for Class T-E and Class T-F members to i) age 65 with a minimum of three years of service credit, or ii) any combination of age and service that totals 92 with at least 35 years of credited service;
4. Increase the withdrawal eligibility requirement for Class T-E and Class T-F members to ten years of service credit;
5. Class T-E and Class T-F can not elect to receive a lump sum payment of member contributions;
6. Establish a "shared-risk" employee contribution rate for Class T-E and Class T-F members. Members benefit when investments of the fund are doing well and share some of the risk when investments underperform. The member contribution rate will stay within the specified range allotted for Class T-E or Class T-F, but could increase or decrease every three years starting July 1, 2015 depending on investment performance. The member contribution rate can never go below the base rate of $7.5 \%$ for Class T-E members and $10.3 \%$ for Class T-F members, nor above $9.5 \%$ for Class T-E members and $12.3 \%$ for Class T-F members. If the investment rate of return (less investment fees) is equal to or exceeds the assumed rate of return based on the prior ten-year period, the member contribution rate will decrease by $.5 \%$. Likewise, the member contribution rate will increase by $.5 \%$ if the investment rate of return (less investment fees) during the ten-year period is $1.0 \%$ or more below the assumed rate of return. If the Retirement System is fully funded at the time of the comparison, the member contribution rate reverts back
to the base rate for the Class. There shall be no increase in the member contribution rate if there has not been an equivalent increase in the employer contribution rate over the previous three-year period. Until a full ten-year look back is available, the investment return measurement period will begin on July 1, 2011;
7. Require Class T-E and Class T-F members who purchase most types of nonschool or non-state service credit (other than intervening military service) to pay an amount equal to the full actuarial cost of the service purchase;
8. Limit the maximum annual retirement benefit of Class T-E and Class T-F members to not more than $100 \%$ of final average salary; and
9. Class-E and Class T-F members have a one-year period from date of membership to purchase Non-Qualifying Part-Time Service.
b. Funding reforms effective with the June 30, 2010 valuation:
10. Extend from five years to ten years the asset smoothing period over which the Retirement System's investment gains and losses are recognized;
11. Re-amortize the unfunded actuarial accrued liability as of the June 30, 2010 valuation, including the cost of Act 120, over a 24 -year period with the amortization payments determined as a level percentage of pay. Future valuation experience gains or losses, and changes in the unfunded accrued liability resulting from changes in actuarial assumptions and methods, will be amortized over a 24year period as a level percentage of pay. Future increases in accrued liability enacted by legislation after June 30, 2010 will be funded over a 10-year period as a level percentage of pay;
12. Modify the employer pension contribution requirements by imposing limits ("collars") on the rate at which employer contributions may rise from year to year. For the fiscal years ending June 30, 2012, June 30, 2013, and on or after June 30, 2014, the pension contribution rate can be no more than $3 \%, 3.5 \%$ and $4.5 \%$, respectively, of total compensation of all active members, greater than the prior year's final contribution rate; and
13. Beginning with the fiscal year in which the actuarially required contribution rate is less than the collared rate, the final contribution rate will be the actuarially determined contribution rate, but not less than the employer normal contribution rate.

The benefit provisions and contribution provisions are summarized in Table 13.

## Actuarial Assumptions and Methods

The actuarial assumptions and methods are outlined in Table 12.

## Contribution Rates

The results of the valuation as of June 30, 2010 determine the employer contribution rate for fiscal year 2011/2012. The calculated employer contribution rate for the 2011/2012 fiscal year is 8.65\%, and the Board of Trustees certified this rate at their December 2010 meeting. This rate consists of an $8.00 \%$ pension rate (fiscal year 2010/2011 rate of $5.00 \%$ plus the Act $1203.00 \%$ collar) plus a $0.65 \%$ health insurance contribution rate.

The average contribution rate payable by the members is $7.37 \%$. Effective January 1, 2002, the employee contribution rate for members who elected to have prior school service and intervening military service converted to Class T-D service increased by $1.25 \%$ to $7.50 \%$. Anyone who enrolls after June 30, 2001 and before July 1, 2011 is automatically a member of Class T-D. The average member contribution rate of $7.37 \%$ is a pay-weighted average of member rates that vary based on date of hire and based on Class T-D membership. Any employee who becomes a member after June 30, 2011 would become a Class T-E member or, alternatively, elect to become a Class T-F member. The base contribution rate for Class T-E members is $7.50 \%$ of compensation. The base contribution rate for Class T-F members is $10.30 \%$ of compensation. Class T-E and Class T-F members are subject to a "shared-risk" employee contribution rate.

## Reasons for Change in the Rate Calculated by the Actuary

The employer contribution rate calculated by the actuary increased from $5.64 \%$ for fiscal year 2010/2011 to $8.65 \%$ for fiscal year 2011/2012. The reconciliation of the employer contribution rates by source is as follows:

- FY2010/2011 Act 46 final rate $5.64 \%$
- Deferral of FY 2011 pension contribution due to Act $46 \underline{2.58}$
- FY 2010 /2011 rate prior to Act 46 8.22\%
- Increase due to change in normal rate 0.04
- Net increase due to payroll growth and liability experience 0.40
- Increase due to actuarial loss on assets 1.94
- Increase due to Act 120 funding reforms (before 3\% collar) 8.31
- Deferral of FY 2012 pension contribution due to Act 120 3\% collar (10.27)
- Increase due to change in health insurance contribution rate $\underline{0.01}$
- Final FY 2011/2012 employer contribution rate 8.65\%

## Summary of Principal Results

Summarized below are the principal financial results for the Public School Employees' Retirement System based upon the actuarial valuation as of June 30, 2010. Comparable results from the June 30, 2009 valuation are also shown.

## Five-Year History of Principal Financial Results

Five-Year History of Contribution Rates
(As a \% of Payroll)

| Fiscal Year | Member <br> Contributions | Employer Contributions |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Normal Cost | Unfunded <br> Accrued <br> Liability | Health <br> Insurance | Preliminary Employer Contribution | Final Employer Contribution |
| 2011/2012 | 7.37\% | 8.12\% | 10.15\% | 0.65\% | 18.27\% | 8.65\%** |

The following chart shows a five-year history of employer contribution rates:

Five-Year History of Employer Contribution Rates

## Funded Ratio

The financing objective of the Retirement System is to:

- Fully fund all current costs based on the normal contribution rate determined under the funding method; and
- Liquidate the unfunded accrued liability based on level percentage of pay amortization schedules required by the Retirement Code as amended by Act 2010-120, i.e., a schedule of 24 years for the unfunded accrued liability as of June 30, 2010 and each change in the unfunded accrued liability due to actuarial experience after the June 30, 2010 valuation. Any legislation after June 30, 2010 that increases the liability will be funded over 10 years.
- As directed by Act 2010-120, use pension rate collars to moderate the rise of annual employer pension contribution rates to reach the full actuarially determined contribution funding level in a budgetary sound manner and within a financially responsible period of time.

The total contribution rate of $8.65 \%$ of payroll payable by employers, when taken together with the contributions payable by the members, current assets, and expected future asset returns, is sufficient to achieve the financing objective.

The Retirement System's total funded ratio on this funding basis is measured by comparing the actuarial value of assets (based on a phased-in 10-year moving average market value) with the accrued liability. The accrued liability for pensions is the present value of benefits accumulated to date under the Retirement System's funding method and reflects future pay increases for active employees. The accrued liability for Health Insurance equals the assets in the Health Insurance account.

On this basis, the Retirement System's total funded ratio (for Pensions and Health Insurance combined) is $75.1 \%$ as of June 30, 2010. This funded ratio is based on an actuarial value of assets of $\$ 59.4$ billion and an accrued liability of $\$ 79.1$ billion. The funded ratio for Pensions alone is also $75.1 \%$ as of June 30, 2010, based on an actuarial value of assets of $\$ 59.3$ billion, and an accrued liability of $\$ 79.0$ billion.

## Reasons for Change in the Total Funded Ratio

The total funded ratio decreased from 79.2\% as of June 30, 2009 to $75.1 \%$ as of June 30, 2010. This decrease is primarily due to the actuarial value of assets loss that occurred during the year. There was also a net actuarial experience loss.

Five-Year History of Total Funded Ratio*
(\$ Amounts in Millions)

| Valuation as <br> of June 30 | Accrued <br> Liability | Actuarial <br> Value of <br> Assets | Unfunded <br> Accrued <br> Liability | Funded Ratio |
| :---: | :---: | ---: | ---: | :---: |
| 2010 | $\$ 79,122.3$ | $\$ 59,423.7$ | $\$ 19,698.6$ | $75.1 \%$ |
| 2009 | $75,625.9$ | $59,886.7$ | $15,739.2$ | 79.2 |
| 2008 | $70,941.4$ | $61,017.9$ | $9,923.5$ | 86.0 |
| 2007 | $66,593.1$ | $57,155.1$ | $9,438.0$ | 85.8 |
| 2006 | $64,720.1$ | $52,557.5$ | $12,162.6$ | 81.2 |

* For Pensions and Health Insurance (under the funding provisions of the Retirement Code)

The following chart shows a five-year history of the accrued liability and the actuarial value of assets:

Five-Year History of Accrued Liability and Actuarial Value of Assets

The following chart shows a ten-year history of the total funded ratio for Pensions and Health Insurance:

## Ten-Year History of Total Funded Ratio

(2001-2010)

## GASB No. 25 Disclosure

Statement No. 25 of the Governmental Accounting Standards Board (GASB) established reporting standards for the annual financial reports of defined benefit pension plans. The Retirement System complied with Statement No. 25 beginning with the June 30, 1996 valuation. The statement requires disclosure of the "schedule of funding progress" and the "schedule of employer contributions" in the Retirement System's financial statements.

The "schedule of funding progress" shows historical trend information about the Retirement System's actuarial value of pension assets, the actuarial accrued liability for pensions and the unfunded actuarial accrued liability for pensions. The actuarial funded ratio for pensions is measured by comparing the actuarial value of pension assets based on a 10-year moving average market value (a 5-year moving average market value prior to June 30, 2010) with the accrued liability for pensions. The accrued liability is the present value of pension benefits accumulated to date under the Retirement System's funding method and reflects future pay increases for active employees. On this basis, the Retirement System's funded ratio for pensions is $75.1 \%$ as of June 30, 2010. This funded ratio is based on an actuarial value of pension assets of $\$ 59.3$ billion and an accrued liability for pensions of $\$ 79.0$ billion. See Table 7 for more detail.

The schedule of employer contributions shows historical trend information about the GASB Annual Required Contribution (ARC) for pensions, and the percentage of the ARC contributed to the Retirement System. The pension contribution requirements of the Retirement Code differ from the GASB disclosure requirements. As a result, there may be different determinations of contribution requirements for GASB accounting purposes and for State funding purposes. For GASB accounting purposes, the ARC equals the employer normal cost for pensions plus an amount that will amortize the unfunded actuarial accrued liability for pensions over 30 years. Although the employer normal cost for GASB accounting equals the PSERS normal cost for funding, Section 8328 of the Retirement Code specifies different amortization periods for different portions of the unfunded accrued liability, as well as a collar on the employer pension rate. Therefore, the resulting single amortization period may be any number of years. Table 8a presents the GASB 25 schedule of employer contributions.

## GASB No. 43 Disclosure

GASB Statement No. 43 established reporting standards for the annual financial reports of postemployment benefit plans other than pension plans, and these reporting requirements apply to the PSERS health insurance premium assistance plan. The Retirement System complied with Statement No. 43 beginning with the June 30, 2006 valuation. The statement requires disclosure of the "schedule of funding progress" and the "schedule of employer contributions" in the Retirement System's financial statements.

The health insurance liability and funding provisions of the Retirement Code differ from the GASB disclosure requirements. As a result, there are different determinations of actuarial liability and contribution requirements for GASB accounting purposes and for State funding purposes. For purposes of funding, the actuarial liability equals the assets in the health insurance account, and the contribution required is the amount necessary to establish reserves sufficient to provide premium assistance payments to all participating eligible annuitants during the fiscal year that immediately follows the year the employer contribution is made. For GASB accounting purposes, the actuarial liability has been determined under the entry age actuarial cost method, and the Annual Required Contribution (ARC) is equal to the entry age normal cost for health insurance plus an amount that will amortize the entry age unfunded actuarial liability for health insurance over a period of 30 years. (The entry age actuarial cost method was selected for this calculation because it meets the GASB parameters for determining actuarial liability and normal cost, and is the cost method specified by the Retirement Code for the PSERS pension plan.)

The GASB 43 schedule of funding progress, presented in Table 7, shows that as of June 30, 2010, the health insurance assets were $\$ 116,831,000$, measured on a market value basis, while the GASB 43 health insurance liabilities were $\$ 1,162,219,000$, resulting in a funded ratio of 10.1\%.

The GASB 43 schedule of employer contributions first applies to fiscal year 2006/2007, and is presented in Table 8b.

## Rate of Return

The investment return of the trust fund (i.e. total return including both realized and unrealized gains and losses) for fiscal years 2005/2006 through 2009/2010 is shown in the table below. The return based on the actuarial value of assets used for determining annual contribution rates is also shown.

The rate of return on market value reflects the investment earnings on the market value of assets from the beginning of the fiscal year to the end of the fiscal year. The actuarial value of assets is the asset recognized for valuation purposes. The actuarial value of assets, prior to recognition of Act 120, are based on a smoothed market value that spreads the difference between the actual and expected return over a period of five years. The rate of return on the actuarial value of assets is a measure of the increase in the actuarial value of assets from the beginning of the fiscal year to the end of the fiscal year.

| Fiscal <br> Year | Rate of Return Based on |  |
| :---: | :---: | :---: |
|  | Market Value* | Actuarial Value |
| $2009 / 2010$ | $14.6 \%$ | $3.1 \%$ |
| $2008 / 2009$ | -26.5 | 3.5 |
| $2007 / 2008$ | -2.8 | 12.4 |
| $2006 / 2007$ | 22.9 | 13.9 |
| $2005 / 2006$ | 15.3 | 7.9 |

| 2005/2006 | 7,901,068 | 4,242,878 | 3,658,190 | 16.67\% | 609,698 |

4. Actuarial Rate of Return **

* The amounts reported include assets for both Pension and Health Insurance
** The actuarial rate of return is the investment return based on the change in the actuarial value of assets from the June 30 , 2009 valuation to the June 30, 2010 valuation (prior to Act 120 method change).
\# The percentage amounts shown are rounded. The corresponding Deferred Amounts reflect the use of unrounded percentage amounts.

## TABLE 6

## ANALYSIS OF CHANGE IN UNFUNDED ACCRUED LIABILITY AS OF JUNE 30, 2010 <br> (\$ Amounts in Thousands)*

| 2022 | 20,054,674 | 7.47 | 5.84 | 20.62 | 26.46 | 26.46 | 0.57 | 27.03 | 60.3 |

1. The projection of contribution rates is based on the assumption that there are no changes in demographic assumptions, no changes in benefit provisions, and no actuarial gains or losses other than gains or losses on the actuarial value of assets that result from recognizing currently deferred gains or losses on the market value of assets.
2. In general, the Preliminary Employer Pension Rate equals the sum of the rates for the Employer Normal Cost and the Unfunded Liability; and the Final Employer Pension Rate is the greater of the Preliminary Pension Rate and any Pension Rate Floor stated in the Retirement Code. The Total Employer Rate is the sum of the Final Employer Pension Rate and the Employer Health Insurance Rate.
3. For fiscal years ending on or before June 30, 2002, there was no floor specified in the Retirement Code, but the Final Employer Pension Rate could not be less than $0 \%$, since money can only be removed from the trust for purposes allowed by the Retirement Code.
4. Act 2002-38 amended the Retirement Code to place a permanent $1 \%$ floor on the Employer Pension Rate, but also provided that the Total Employer Rate for the year ending June 30, 2003 could not exceed $1.15 \%$, resulting in a $0.18 \%$ Final Employer Pension Rate (the Total Employer Rate of $1.15 \%$ minus the $0.97 \%$ Employer Health Insurance Rate).
5. Act 2003-40 amended the Retirement Code to increase the Employer Pension Rate Floor from 1\% to 4\%.
6. Revised actuarial assumptions based on a five-year experience review ending June 30, 2005 were used to determine the contributions for the fiscal year ending June 30, 2007. Since the benefit changes under Act 2001-9 had not been in effect throughout the entire period covered by the study the Board decided, at its December 2005 meeting, to delay making any changes to the retirement rate assumptions until further data became available. The 5.72\% Final Employer Pension Rate equals the 6.46\% Total Employer Rate certified by the Board at that meeting, minus the $0.74 \%$ Employer Health Insurance Rate. The $5.67 \%$ Preliminary Employer Pension Rate equals the sum of the Employer Normal Cost and Unfunded Liability rates. The Normal Cost and Unfunded Liability rates were calculated by the actuary in January 2006, based on the package of assumptions adopted at the December 2005 meeting.
7. The Board at its January 2009 meeting adopted to reduce the interest rate from $8.50 \%$ to $8.25 \%$ for the June 30,2008 valuation and to $8.00 \%$ thereafter.
8. Act 2010-46 recertified the fiscal year ending June 30, 2011 pension rate from $7.58 \%$ to $5.00 \%$.
9. The Final Employer Pension rate is limited by the Act 2010-120 pension rate collar.

[^3]TABLE 12

## DESCRIPTION OF ACTUARIAL ASSUMPTIONS AND METHODS

## ASSUMPTIONS

Interest Rate: 8.00\% per annum, compounded annually (adopted as of June 30, 2009). The components are $3.25 \%$ for inflation and $4.75 \%$ for the real rate of return. Actuarial equivalent benefits are determined based on $4 \%$ (since 1960).

Separation from Service: Illustrative rates of assumed separation from service are shown in the following table. (Rates of non-vested withdrawal, of death, and of disability were adopted as of June 30, 2005; other rates were adopted as of June 30, 2000):

| Age | Annual Rate of: |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Vested Withdrawal* |  |  |  |  |  |

* Vested Withdrawal - At least 5 years service but not eligible for Early or Superannuation retirement.
** Early Retirement - Age 55 with 25 years service, but not eligible for Superannuation retirement.
Death after Retirement: The Uninsured Pensioners 1994 Mortality Table (UP94) with mortality improvements projected 10 years, and with age set back one year for males and females, adopted in 2005, are used to project mortality for healthy annuitants and for dependent beneficiaries. Special mortality tables based on PSERS' experience are used for disability retirements. (The 1995 George B. Buck Mortality Tables, rated forward one year for males and unadjusted for females, adopted in 2000, are used to determine actuarial equivalent benefits.)

## TABLE 12

## DESCRIPTION OF ACTUARIAL ASSUMPTIONS AND METHODS <br> (Continued)

Salary Increase: Effective average of $6 \%$ per annum, compounded annually (adopted as of June 30, 2005). The components are $3.25 \%$ for inflation, $1 \%$ for real wage growth and $1.75 \%$ for merit or seniority increases. Representative values are as follows:

| Age | Annual Rate of <br> Salary Increase |
| :---: | :---: |
| 20 | $12.00 \%$ |
| 30 | 9.00 |
| 40 | 7.00 |
| 50 | 4.75 |
| 55 | 4.50 |
| 60 | 4.25 |
| 65 | 4.25 |
| 70 | 4.25 |

## MISCELLANEOUS

Option 4 Elections: $100 \%$ of members are assumed to elect a refund of contributions and a reduced annuity.

Withdrawal Annuity: 90\% of members are assumed to commence payment immediately and $10 \%$ are assumed to defer payment to superannuation age.

## Health Insurance

Elections: 66\% of eligible retirees are assumed to elect premium assistance.
Administrative Expenses: Assumed equal to 2\% of contributions made during the year.

## METHODS

Calculations: The actuarial calculations were performed by qualified actuaries in accordance with accepted actuarial procedures, based on the current provisions of the retirement system, and on actuarial assumptions that are internally consistent and reasonably based on the actual experience of the System.

Asset Valuation Method: A ten-year moving market average (five-year moving market average prior to June 30,2010 ) value of assets that recognizes the $8.00 \%$ ( $8.25 \%$ prior to June 30, 2009 and $8.50 \%$ prior to June 30, 2008) actuarial expected investment return immediately and spreads the difference between the actual return on the market value of assets and the expected return on the actuarial value of assets over a period of ten years. The averaging period is being phased-in from fiscal year 2006.

## TABLE 12

## DESCRIPTION OF ACTUARIAL ASSUMPTIONS AND METHODS (Continued)

Actuarial Cost Method for Pension Funding: Entry Age Normal Cost Method (modified slightly as of June 30, 2005 to use a pay-weighted average normal contribution rate). The results of each June 30 valuation normally determine the employer contribution rate for the second succeeding fiscal year. Act 120 revised the funding method effective with the June 30, 2010 valuation. Act 120 mandated that the outstanding balance of the unfunded accrued liability as of June 30, 2010, including changes in the unfunded accrued liability due to the funding reforms of Act 120, be amortized over a 24 -year period, as a level percent of pay, beginning July 1, 2011. Future valuation gains and losses, and changes in the unfunded accrued liability resulting from changes in actuarial assumptions and methods, are amortized over a 24 -year period, as a level percent of pay. Future increases in the unfunded accrued liability due to legislation will be amortized over a 10-year period, as a level percent of pay. Act 120 also modified the employer pension contribution requirements by imposing collars on the rate at which employer contributions may rise from year to year. For the fiscal years ending June 30, 2012, June 30, 2013, and on or after June 30, 2014 the pension contribution rate can be no more than $3 \%, 3.5 \%$ and $4.5 \%$, respectively, of total compensation of all active members, greater than the prior year's final contribution rate. Beginning with the fiscal year in which the actuarially required contribution rate is less than the collared rate, the final contribution rate is the actuarially determined contribution rate, provided that the final contribution rate is not less than the employer normal contribution rate.

Actuarial Cost Method for GASB 25 Accounting for Pensions: Same as for pension funding, except that the GASB 25 amortization payment will be set equal to the level dollar amount that will amortize the unfunded accrued liability over a period of 30 years.

Actuarial Cost Method for Health Insurance Funding: The actuarial liability equals the assets in the health insurance account, and the results of the June 30 valuation determine the contribution rate for the second succeeding fiscal year. The rate so determined is the rate necessary to establish reserves sufficient to cover administrative expenses and provide premium assistance payments for all participating eligible annuitants during the third fiscal year that follows the valuation date.

Actuarial Cost Method for GASB 43 Accounting for Health Insurance: The actuarial liability is determined under the entry age actuarial cost method, and the Annual Required Contribution (ARC) for the second fiscal year that follows the valuation date is equal to the entry age normal cost for health insurance plus an amount that will amortize the entry age unfunded actuarial liability for health insurance over a period of 30 years.

## DATA

Census and Assets: The valuation was based on members of the Retirement System as of June 30, 2010 and does not take into account future members. All census data was supplied by the Retirement System and was subject to reasonable consistency checks. The actuary adjusts the data to account for service and pay earned by members on or before the valuation that is not reported by the Retirement System until after the actuarial valuation is performed. Asset data was supplied by the Retirement System.

## TABLE 13

## SUMMARY OF BENEFIT AND CONTRIBUTION PROVISIONS

## MEMBERSHIP

For valuation purposes, all employees are considered to be full coverage. All employees who become members on and after January 1, 1966 are members of the dual coverage group. Dual coverage members contribute to both PSERS and to Social Security.

## BENEFITS

## Superannuation Annuity

Eligibility

Amount

Age 62, or age 60 with 30 years of service, or 35 years of service regardless of age. For Class T-E and Class T-F members, age 65 with a minimum of three years of service credit, or any combination of age and service that totals 92 with at least 35 years of credited service
2.5\% of final average salary times years of school service and intervening military service. $2 \%$ of final average salary for non-school service, for members who do not elect Class T-D coverage, and for Class T-E members. Minimum of $\$ 100$ per year of service. "Final average salary" means the highest average annual salary for any 3 years of service.

Annual salary is subject to a limit of $\$ 200,000$, as adjusted under Section 401(a)(17). As of June 30, 2010, the adjusted limit is $\$ 245,000$.

For members who elect coverage under Class T-D, the maximum benefit is equal to the limit established by Section 415 of the Internal Revenue Code.

For Class T-E and Class T-F members, the maximum benefit is equal to the lesser of the limit established by Section 415 of the Internal Revenue Code or $100 \%$ of final average salary.

## Early Retirement Annuity

Eligibility
Amount

Age 55 with 25 years of service.
Accrued benefit as of date of retirement, reduced $1 / 4 \%$ for each month by which commencement of payments precedes Superannuation Age.

## TABLE 13

## SUMMARY OF BENEFIT AND CONTRIBUTION PROVISIONS

(Continued)

For members who elect coverage under Class T-D, the maximum benefit is equal to the limit established by Section 415 of the Internal Revenue Code.

For Class T-E and Class T-F members, the maximum benefit is equal to the lesser of the limit established by Section 415 of the Internal Revenue Code or 100\% of final average salary.

## Withdrawal Annuity

Eligibility

Amount

## Disability Annuity

Eligibility

Amount

5 years of service. For Class T-E and Class T-F members, ten years of service.

Accrued benefit deferred to superannuation retirement age or an actuarially reduced benefit payable immediately. Actuarially equivalent benefits are based on 4\% interest and the 1995 George B. Buck mortality tables, rated forward one year for males and unadjusted for females.

5 years of service.
The standard single life annuity if the total number of credited service is greater than 16.667 , otherwise the standard single life annuity multiplied by the lesser of the following ratios: $\left(\mathrm{Y}^{*} / \mathrm{Y}\right)$ or $(16.667 / \mathrm{Y})$ where Y is the number of years of credited service and $\mathrm{Y}^{*}$ is the total years of credited service if the member were to continue as a school employee until superannuation retirement age (or at current age, if later). Minimum of \$100 per year of service.

Death or separation from service and member does not qualify for other benefits.

Refund of accumulated deductions includes interest (less annuity payments received prior to death in the case of a retired member).

## TABLE 13

## SUMMARY OF BENEFIT AND CONTRIBUTION PROVISIONS

(Continued)

## Death Benefit

Eligibility Death of an active member or vestee who was eligible to receive an annuity.

Amount

The present value of the annuity that would have been effective if the member retired on the day before death. Option 1 (see next page) assumed payable if no other option elected.

## Normal and <br> Optional Forms <br> of Benefits

Normal Form: Life annuity with a guaranteed payment equal to member contributions with interest.

Option 1:

Option 2
Option 3: Joint and 50\% survivorship annuity.
Option 4: Benefit of equivalent actuarial value, including lump sum payment of member contributions. Class T-E and Class T-F members can not elect to receive a lump sum payment of member contributions.

## Health Care Premium Assistance

Eligibility Retired members who:
(a) have $24 \frac{1}{2}$ or more years of service, or
(b) are disability annuitants, or
(c) have 15 or more years of service and who both terminated school service and retired after attaining superannuation age and
(d) participate in the PSERS health options program or in an employer-sponsored health insurance program.

Amount
Participating eligible annuitants receive health insurance premium assistance payments from the Health Insurance

## TABLE 13

## SUMMARY OF BENEFIT AND CONTRIBUTION PROVISIONS

(Continued)

Account equal to the lesser of $\$ 100$ per month or the actual monthly premium. All administrative expenses necessary to operate the health insurance premium assistance program are to be funded by the Health Insurance Account. The Health Insurance Account is credited with contributions of the Commonwealth and the employers.

## CONTRIBUTIONS

By Members

Members who elected coverage under Class T-D and who were most recently enrolled prior to July 22, 1983 contribute at a rate of $61 / 2 \%$ of compensation, while members who elected coverage under Class T-D and who were most recently enrolled on or after July 22, 1983 contribute at a rate of $7 \frac{1}{2} \%$ of compensation. Members who did not elect coverage under Class T-D and who were most recently enrolled prior to July 22, 1983 contribute at a rate of $5 \frac{1}{4} \%$ of compensation, while members who did not elect coverage under Class T-D and who were most recently enrolled on or after July 22, 1983 and prior to July 1, 2001 contribute at a rate of $61 / 4 \%$ of compensation. Anyone who enrolls or re-enrolls on or after July 1, 2001 automatically has coverage under class T-D for subsequent school service and subsequent intervening military service, and must contribute at a rate of $71 / 2 \%$ of compensation. Reduction in rate for a joint coverage member: $40 \%$ of Social Security tax, exclusive of disability and medical coverage portion.

The base contribution rate for Class T-E members is $7 \frac{1}{2} \%$ of compensation. The base contribution rate for Class T-F members is $10.3 \%$ of compensation. Class T-E and Class T-F members are subject to a "shared-risk" employee contribution rate. Members benefit when investments of the fund are doing well and share some of the risk when investments underperform. The member contribution rate will stay within the specified range allotted for Class T-E or Class T-F, but could increase or decrease every three years starting July 1, 2015 depending on investment performance. The member contribution rate can never go below the base rate of $7.5 \%$ for Class T-E members and $10.3 \%$ for Class T-F members, nor above $9.5 \%$ for Class T-E members and $12.3 \%$ for class T-F members. If the investment rate of return (less investment fees) is equal to or exceeds the assumed rate of return based on the prior ten-year period, the member contribution rate will

## TABLE 13

## SUMMARY OF BENEFIT AND CONTRIBUTION PROVISIONS

(Continued)
decrease by . $5 \%$. Likewise, the member contribution rate will increase by $.5 \%$ if the investment rate of return (less investment fees) during the ten-year period is $1.0 \%$ or more below the assumed rate of return. If the Retirement System is fully funded at the time of the comparison, the member contribution rate reverts back to the base rate for the Class. There shall not be an increase in the member contribution rate if there has not been an equivalent increase in the employer contribution rate over the previous three-year period. Until a full ten-year look back period is available, the investment return measurement period will begin on July 1, 2011.

By Commonwealth and School Districts

Balance of required contribution determined as normal contribution, accrued liability contribution, supplemental annuity contribution, experience adjustment factor and premium assistance contribution, is funded by the Commonwealth and the School Districts.

## TABLE 14

## SUMMARY OF MEMBERSHIP DATA AS OF JUNE 30, 2010

(\$ Amounts in Thousands)

| Item | Male | Female | Total |
| :---: | ---: | ---: | ---: |
| Number of Members | 76,992 | 205,049 | 282,041 |

## DEFINITIONS OF OPTIONS

Option 1 A life annuity to the member with a guaranteed payment to the beneficiary equal to the present value of the total maximum single life annuity less any amounts paid to the member prior to death.

Option 2 A joint and one hundred percent (100\%) survivor annuity payable during the lifetime of the member with the full amount of such annuity payable thereafter to the designated survivor annuitant, if living at the member's death.

Option 3 A joint and fifty percent (50\%) survivor annuity payable during the lifetime of the member with one-half of such annuity payable thereafter to the designated survivor annuitant, if living at the member's death.

Option 4 A life annuity to the member with a special death benefit other than the normal option 1, 2, or 3 death benefit.

## Accrued Liability

## Accrued Service

## Actuarial Assumptions

## Actuarial Cost Method

## Actuarial Equivalent

## Actuarial Value of Assets

## Amortization

## Experience Gain (Loss)

## Normal Cost

The difference between (a) the present value of future plan benefits, and (b) the present value of future normal cost. It is the portion of the present value of future plan benefits attributable to service accrued as of the valuation date. Sometimes referred to as "actuarial accrued liability."

The service credited under the plan that was rendered before the date of the actuarial valuation.

Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

A mathematical budgeting procedure for allocating the dollar amount of the "present value of future plan benefits" between the present value of future normal cost and the accrued liability. Sometimes referred to as the "actuarial funding method."

A series of payments is called an actuarial equivalent of another series of payments if the two series have the same actuarial present value.

The value of current plan assets recognized for valuation purposes. Based on a smoothed market value that recognizes investment gains and losses over a period of ten years.

Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

The annual cost assumed, under the actuarial funding method, for current and subsequent plan years. Sometimes referred to as "current service cost."

## EXHIBIT VIII

## GLOSSARY

(Continued)

#### Abstract

Present Value The amount of funds presently required to provide a payment or series of payments in the future. The present value is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

Unfunded Accrued Liability The difference between the actuarial accrued liability and valuation assets.

[^0]:    * Market Value Rate of return provided by Wilshire Associates Incorporated, PSERS investment consultant.

[^1]:    * Based on Estimated Employer Payroll for Fiscal Year Ending 2012 of \$ 14,112,000.

[^2]:    * The amounts reported above include assets and liabilities for Health Insurance Premium Assistance. The health insurance liabilities for GASB 43 disclosure have been calculated under the entry age normal cost method, which provides liabilities that differ from those determined under the funding requirements of the Retirement Code.

[^3]:    * The number for the first year of the projection reflects the assumption that all Active members age 74 and above, and that all vested inactive members who have reached superannuation age retire immediately.

[^4]:    * The annual annuities added and deleted are for the annuitants and survivor annuitants who were added and deleted. Changes in annuities for continuing payees may also occur due to finalization of benefit calculations and due to the commencement of supplemental annuity payments.
