

REPORT OF THE ACTUARY

On An Actuarial Valuation of the System
as of June 30, 1973

An actuarial valuation of a retirement system is undertaken to establish the liabilities and reserve requirements for the accrued and prospective pension credits under the established benefit schedule. An actuarial balance sheet is prepared showing the accrued and prospective liabilities and the present and prospective assets available to meet these liabilities.

A calculation is made of the liabilities incurred for the several benefit obligations. The reserves required to meet these accrued liabilities for the lifetime of the members are determined. The factors of mortality, turnover in employment and interest earnings are basic in this procedure. Other factors are prominent in the actuarial process, including rates of salary and their progression until retirement of the members, disability expectancies and the ages at which members may be expected to retire.

Rates reflecting these basic factors that were formulated in a previous survey and investigation of operating experience of the system were applied in this valuation. Because of the marked variance in basic characteristics between State employees and teacher-members, separate rates were applied. Because of the diverse physiological conditions and employment

factors between male and female members, a further division in rates was made for the factor of sex. Some variations from these established standards frequently occur in current operations. These are also considered by means of special adjustments of the results of the valuation.

BASIS OF VALUATION

The benefit and contribution provisions of the retirement plan forming the basis of the valuation are summarized in the appendix of this report. The several assumptions relative to the actuarial factors applied in this valuation are as follows:

1. Mortality expectancy: The 1951 Group Annuity Table (modified)
2. Interest rate: Compound interest at 5% per annum
3. Turnover factors: Assumed annual rates of withdrawal from all causes -

| Age | Rate per 1,000 |
|-------------|----------------|
| 20 | 247 |
| 25 | 198 |
| 30 | 162 |
| 35 | 120 |
| 40 | 91 |
| 45 | 60 |
| 50 | 33 |
| 55 | 15 |
| 60 and over | Mortality only |

4. Future salary increment: An annual increment of 4½%
5. Average age at retirement: 62 years
6. Disability rates: Class (1) rates of disablement from the Society of Actuaries 1952 Inter-company study were used. It was assumed that 15% of all disablements would occur in line of duty.

7. Marital status: 85% of employees in service assumed to be married with the average age of the wives 4 years less than that of the employees. 65% of the employees retiring on pension were married

8. Administrative expense: None provided

MEMBERSHIP STATISTICS

Detailed statistics forming the basis of the valuation were compiled and tabulated. Statistical tables reflecting this data are presented in the appendix. A summary thereof is as follows:

| ACTIVE MEMBERS | State Employees | | Teachers | |
|------------------|-----------------|--------------|--------------|--------------|
| | Male | Female | Male | Female |
| Number | 7,488 | 6,885 | 4,743 | 7,940 |
| Percent of total | 52.1% | 47.9% | 37.4% | 62.6% |
| Annual salaries | \$65,991,744 | \$46,322,280 | \$48,867,129 | \$79,296,780 |
| Average salary | \$8,813 | \$6,728 | \$10,300 | \$9,987 |
| Average age | 45.0 | 41.6 | 37.3 | 40.1 |
| Average service | 8.9 | 7.6 | 9.3 | 9.9 |

| <u>RETIREMENTS</u> | <u>State Employees</u> | | <u>Teachers</u> | |
|------------------------------|------------------------|---------------|-----------------|---------------|
| | <u>Male</u> | <u>Female</u> | <u>Male</u> | <u>Female</u> |
| Number | 1,428 | 1,237 | 390 | 1,814 |
| Percent of total | 53.6% | 46.4% | 17.7% | 82.3% |
| Average age at June 30, 1973 | 70.6 | 75.2 | 69.8 | 70.5 |
| Retirements during year | 204 | 191 | 47 | 191 |
| Average age at retirement | 63.2 | 63.6 | 62.4 | 63.7 |
| Terminations | 85 | 53 | 10 | 63 |
| Average age at death | 72.6 | 73.1 | 78.5 | 79.7 |

RESULTS OF VALUATION

The financial stability of any retirement system may be determined by comparing the accrued liabilities for earned pension credits, at the end of a fiscal period, by present assets. This assumes that the accruing pension credits are fully funded currently, and that the accrued pension liability is being systematically amortized.

This is not the case with the Employees' Retirement System which receives only a part of its currently accruing cost requirements. The system is funded on a partial reserve basis with the contributions by the State being at a lesser rate than the total cost of the accruing pension credit. The rate of funding for the system, or security ratio as it is commonly referred to, is only 33.9%. This is the extent to which the accrued liabilities are covered by net present assets.

The contributions by the employers are determined as the average annual requirements for benefits according to a 5-year projection of pension expenditures by the system. The rate per cent of contributions for the period of 5 years effective July 1, 1972 is 6.5% of payroll for State employees and 9.0% of payroll for teacher-members. The latter cost is shared equally by the State and the cities and towns. Partial funding results in a deferment of part of the currently incurred pension cost with the consequent increase in the actuarial deficit. As a result, the unfunded accrued liability or actuarial deficit is steadily increased. Such unfunded liability has been in an upward trend for a number of years and will in all probability continue to increase for an indeterminate period.

Even if full funding of currently accruing pension credits is provided, the unfunded accrued liability would continue to increase by the accruing interest on the unfunded liability at the rate of interest assumption in effect, which is 5% per annum.

Actuarial reserve funding. The full cost of financing current service of the members of the system, as a percentage of payroll, according to actuarial criteria which reflects the accrual principle, is as follows:

| | <u>State Employees</u> | <u>Teacher Members</u> | <u>Composite</u> |
|--|------------------------|------------------------|------------------|
| Normal cost as a percentage of payroll | 16.2% | 20.3% | 18.4% |
| Less, member contributions | <u>5.0</u> | <u>6.0</u> | <u>5.5</u> |
| Cost to the Employers | 11.2% | 14.3% | 12.9% |

VALUATION BALANCE SHEET

A Valuation Balance Sheet is presented in the following pages displaying the financial condition of the system at June 30, 1973. From a technical standpoint, a sound financial condition exists when the system has present assets equal to the difference between (a) the total of all accrued and prospective liabilities, and (b) the present value of future contributions to be received according to the prescribed rates. A system attaining this status will have provided in full for all accrued pension credits in accordance with actuarial requirements.

TOTAL LIABILITIES AND RESERVES

\$770,959,750

The following explanation of the several items comprising the Valuation Balance Sheet is given to facilitate an understanding of their function and meaning.

Net Present Assets comprise the assets on hand as shown by the financial reports supplied by the system as of June 30, 1973.

Deferred Assets consist of the obligations of the members and the employers for service to be rendered subsequent to June 30, 1973. They represent actuarially determined amounts, giving effect to the factors of mortality, interest, turnover and others that enter into the computation of liabilities and annuities and benefits that accrue on account of future service.

Unfunded Accrued Liability constitutes the amounts accrued and unpaid on account of service rendered prior to the balance sheet date. This is an accrued obligation of the State and the Cities and Towns to be discharged in future years by increased financial allocations to the system.

Future Service Liability is an offset to Deferred Assets and represents the present value of the proportionate pension credits to be earned by the members during future service extending from the balance sheet date to the assumed ages of retirement.

Reserve for Members' Contributions consists of the total of members' contribution credits at the balance sheet date. Part of these credits is payable as a refund in future years to members withdrawing from service on account of resignation,

dismissal or death. The remainder is to be applied to finance a portion of the annuities and benefits payable to members now in service who will ultimately qualify for retirement.

Reserve for Teachers' Survivor Benefits represents the accumulation of contributions by the teacher-members and the Cities and Towns towards the survivor benefit provision specifically applicable to these members.

Reserve for Employer Contributions represents the amounts that must be provided to finance the employers' portion of the accrued pension credits for those employees now in service who will ultimately qualify for retirement and disability pensions.

Retirement and Benefits Reserve constitutes the amount reserved to payout during the future lifetime of the pensioners presently on the pension roll the pensions granted and in force at the balance sheet date.

CERTIFICATION

The accompanying Valuation Balance Sheet exhibits the assets, accrued liabilities and reserves of the system as of June 30, 1973. Present assets were taken from the financial statements submitted by the Senior Accountant of the system.

In our opinion, this Valuation Balance Sheet correctly presents the condition of the Employees' Retirement System of the State of Rhode Island at June 30, 1973 after giving effect to all accrued liabilities and actuarial reserve requirements for the several annuities and benefits under the applicable law in effect at such date.

RECONCILIATION OF THE INCREASE IN
THE UNFUNDED ACCRUED LIABILITY

| | |
|--|---------------------|
| 1. Normal cost requirements - | |
| 12.9% of payroll of \$240,477,933 | \$31,021,653 |
| Less, employers' contributions for the year | <u>16,372,459</u> |
| Deficiency in current year's contributions | \$14,649,194 |
| 2. Interest on the unfunded accrued liability at June 30, 1972 | 14,608,618 |
| 3. Increase in liability due to 1973 amendments | 9,331,452 |
| 4. Adjustment of actuarial factors to reflect current operating experience - | |
| (a) Salary projection scale | 13,916,211 |
| (b) Mortality | <u>8,690,591</u> |
| TOTAL | \$61,196,066 |
| Less, excess investment income above the 5% interest rate assumption | <u>1,353,000</u> |
| BALANCE | <u>\$59,843,066</u> |

FUTURE PENSION AND BENEFIT PAYOUTS

For the purpose of illustrating the importance of adequate funding of pension obligations on a systematic basis, giving effect to the accruing aspects thereof, there is presented herein a projection of pension and benefit payouts for a number of years in the future. Such a statement should serve to dramatize and focus attention on the magnitude of the pension obligation and its full meaning in terms that may be readily understood by the public officials having to do with the formulation of budgets and more particularly by members of the Legislature.

The following projection of future pension payouts clearly illustrate the amounts of pension payments that the system will be required to meet in future years under the present conditions of the retirement plan.

| <u>Year</u> | <u>Amounts of future pension payments (in millions)</u> |
|-------------|---|
| 1973 | \$18.9 |
| 1976 | 27.7 |
| 1979 | 37.3 |
| 1982 | 49.2 |
| 1985 | 62.4 |

It should also be noted that any liberalizing changes in the provisions of the plan will effect an increase in the foregoing amounts.

FINANCING THE PENSION OBLIGATION

The cost of retirement benefits in any year is represented by the value of the pension credits earned by the active members during the year. These yearly pension credits form a proportionate part of the ultimate retirement benefits which would become due and payable to the members as they qualify for retirement by fulfilling the prescribed conditions as to age and service.

Pension and benefit payments during any year, therefore, are derived from a combination or accumulation of earned pension credits covering a number of productive years which represent the total periods of service rendered by the annuitants. It is the accumulation of these pension credits during the service of the members which constitutes the reserve requirements for financing the pension payments to the qualifying members when the obligations mature. This current accumulation of pension credits represents the real cost of the benefits for any fiscal period.

The foregoing illustrates the accrual or reserve principle that governs a retirement system. Actuarial criteria reflect the accrual concept. It underlies all retirement system operations. Even if a retirement law did not specifically spell out the methods of financing the pension credits, the accrual principle would be implicit in its basic provisions. Rates of contribution are formulated with the view of accumulating adequate

reserves representing the pension credits to meet the ultimate payouts for the retirement benefits. Revenues from these rates are substantially in excess of the current expenditures for retirement benefits. This excess represents the reserve for meeting the future pension and benefit payments.

It is this reserve which is created by the application of these contribution rates that seems to be a source of temptation to officials of government, particularly those having to do with the formulation of budgets. This has brought about the withholding of revenues from the retirement system by means of arbitrary reductions in appropriations below the actual requirements for the accruing pension credits. Pressures also arise from time to time for the application or diversion of some or all of the accumulated reserves for other governmental purposes.

The Employees' Retirement System of the State of Rhode Island has been affected by this process. It has experienced a substantial curtailment of prescribed revenues during recent years. The effect of this practice, if continued, will be a steady depletion of its reserves and a deterioration of its financial condition. This has already occurred as will be noted by a reduction in the funded rate or security ratio this past year. In the course of time, if this process is continued, the assets of the system would be reduced to a point where a diversion of members' contribution credits may be necessary to

meet a part or all of current pension payments. The statement of projected payouts under the existing benefit schedule referred to in the preceding section of this report is irrefutable evidence of the shortcomings of a policy designed to curtail the revenues of the system below its accruing cost requirements.

In its true concept, pension cost is a current operating expense of government. It is an obligation which cannot logically be deferred. It has a direct and immediate relationship to the entire fiscal operations of government. There is no short cut method or formula for financing this cost. A retirement plan is considered to be a legitimate employee welfare program of governmental concern. The principle that government should bear a measure of responsibility for employees whose productivity has become impaired due to old age or disability is now generally accepted. Since this is the case, government should face up to its responsibility in this area. It should be willing to meet the cost of pensions on the most practical and economical basis. This basis is the one that reflects the accruing or current budgeting concept.
